

Renderings of potential design options/placements

Light on vertical section of roadway light poles

a progression of dynamic visual forms to draw the eye down the street

opportunity for user activation, real time color mixing, fade and motion sequences, and highlighting of special occasions

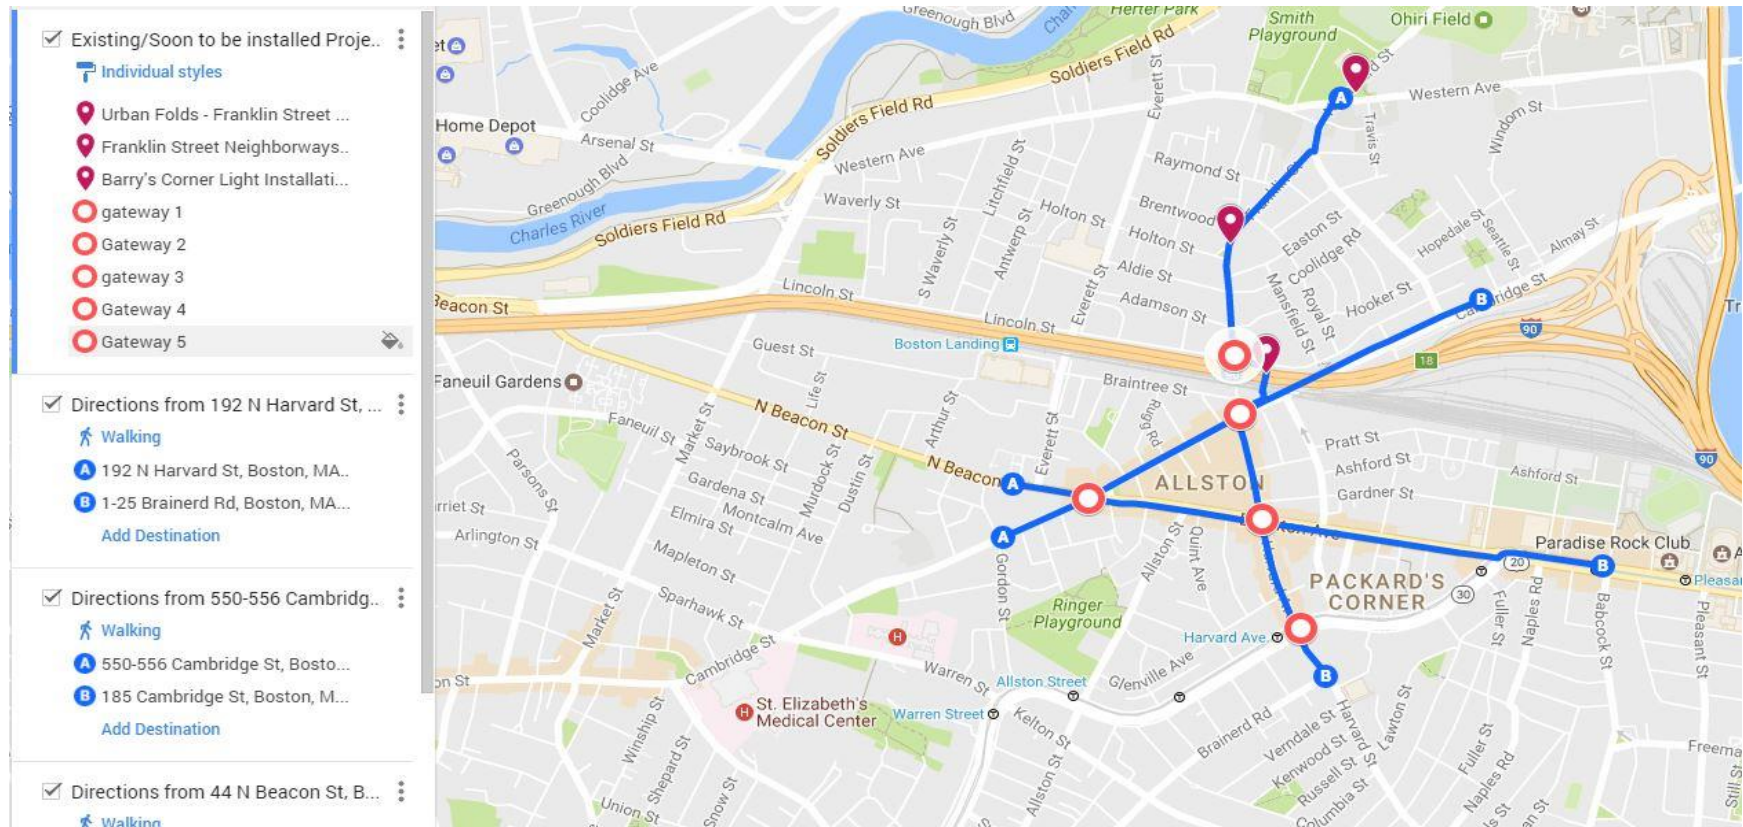

Progression of over-street gateway light designs

Maps:

Below is a map of main pedestrian/cyclist paths to and from the district with the Harvard Avenue → Franklin Street → North Harvard being one of the most popular connectors. Our project aims to further connect these streets and neighborhood centers (Allston Village and Barry's Corner) by providing a guided passageway that connects to already existing or soon-to-be existing art installations (purple flags on map below). Light installations will also gather at a higher density at what we call the "gateway intersections" of Allston Village (pink circle flags on map below).
