# Appendix B: BPDA Checklists

**Accessibility Checklist**

**Climate Change Preparedness and Resiliency Checklist**

boston planning & development agency

# Climate Resiliency Checklist

NOTE: Project filings should be prepared and submitted using the online Climate Resiliency Checklist.

## A.1 - Project Information

| | | | | |
|---|---|---|---|---|
| Project Name: | **L Street Station Redevelopment** | | | |
| Project Address: | **776 Summer Street, Boston, MA 02127** | | | |
| Project Address Additional: | **N/A** | | | |
| Filing Type (*select*) | *Initial (PNF, EPNF, NPC or **other substantial filing**)*<br>*Design / Building Permit (prior to final design approval), or*<br>*Construction / Certificate of Occupancy (post construction completion)* | | | |
| Filing Contact | **Ralph Cox** | **Redgate** | **ralph.cox@redgate-re.com** | **(617) 904-7000** |
| Is MEPA approval required | ***Yes**/no* | | *Date* | |

## A.3 - Project Team

| | |
|---|---|
| Owner / Developer: | **HRP 776 Summer Street, LLC, c/o Hilco Real Estate** |
| Architect: | **Stantec Architecture** |
| Engineer: | **VHB** |
| Sustainability / LEED: | **WSP** |
| Permitting: | **VHB** |
| Construction Management: | **TBD** |

## A.3 - Project Description and Design Conditions

| | |
|---|---|
| List the principal Building Uses: | **Mixed Use** |
| List the First Floor Uses: | **Mixed Use** |
| List any Critical Site Infrastructure and or Building Uses: | **Mixed Use** |

**Site and Building:**

| | | | |
|---|---|---|---|
| Site Area: | *15 acres* | Building Area: | *1.93 MSF* |
| Building Height: | *Up to 210 Ft* | Building Height: | *Up to 210* |
| Existing Site Elevation – Low: | *16.5 Ft BCB* | Existing Site Elevation – High: | *16.5 Ft BCB* |
| Proposed Site Elevation – Low: | *31 Ft BCB* | Proposed Site Elevation – High: | *31 Ft BCB* |
| Proposed First Floor Elevation: | *21.5 Ft BCB* | Below grade levels: | *Varies* |

**Article 37 Green Building:**

| | | | |
|---|---|---|---|
| LEED Version - Rating System : | **New Construction (version 4)** | LEED Certification: | *TBD* |

| | | | |
|---|---|---|---|
| Proposed LEED rating: | *Certified/**Silver/ Gold**/Platinum* | Proposed LEED point score: | *54-63* |

**Building Envelope**

When reporting R values, differentiate between R discontinuous and R continuous. For example, use "R13" to show R13 discontinuous and use R10c.i. to show R10 continuous. When reporting U value, report total assembly U value including supports and structural elements.

| | | | |
|---|---|---|---|
| Roof: | *R-40 (R)* | Exposed Floor: | *R-30 (R)* |
| Foundation Wall: | *C-0.119* | Slab Edge (at or below grade): | *F-0.51* |

Vertical Above-grade Assemblies (%'s are of total vertical area and together should total 100%):

| | | | |
|---|---|---|---|
| Area of Opaque Curtain Wall & Spandrel Assembly: | *TBD %* | Wall & Spandrel Assembly Value: | *U-0.055 (U)* |
| Area of Framed & Insulated / Standard Wall: | *70% - Resi/hotel 60% - office* | Wall Value | *R-18 (R)* |
| Area of Vision Window: | *30% - Resi/hotel 40% - office* | Window Glazing Assembly Value: | *U- 0.38(U)* |
| | | Window Glazing SHGC: | *0.35(SHGC)* |
| Area of Doors: | *TBD %* | Door Assembly Value: | *0.5 (U)* |

**Energy Loads and Performance**

| | | | |
|---|---|---|---|
| For this filing – describe how energy loads & performance were determined | *Energy modeling using eQuest v3.65. Baseline model was derived from ASHRAE90.1-2013 App. G with MA amendments.* | | |
| Annual Electric: | *18,500,000 total site (kWh)* | Annual Electric: | *18,500,000 total site (kWh)* |
| Annual Heating: | *450,000 therms* | Annual Heating: | *450,000 therms* |
| Annual Cooling: | *TBD (Tons/hr)* | Annual Cooling: | *TBD (Tons/hr)* |
| Energy Use - Below ASHRAE 90.1 - 2013: | *15 %* | Energy Use - Below ASHRAE 90.1 - 2013: | *15 %* |
| Energy Use - Below Mass. Code: | *15 %* | Energy Use - Below Mass. Code: | *15 %* |

**Back-up / Emergency Power System**

| | | | |
|---|---|---|---|
| Electrical Generation Output: | *75 – 750 (kW)* | Number of Power Units: | 1 |
| System Type: | *Combustion Engine* | Fuel Source: | Diesel |

**Emergency and Critical System Loads** (in the event of a service interruption)

| | | | |
|---|---|---|---|
| Electric: | *50 – 605 (kW)* | Heating: | *TBD* |
| | | Cooling: | *TBD* |

## B – Greenhouse Gas Reduction and Net Zero / Net Positive Carbon Building Performance

Reducing GHG emissions is critical to avoiding more extreme climate change conditions. To achieve the City's goal of carbon neutrality by 2050 new buildings performance will need to progressively improve to net carbon zero and positive.

### B.1 – GHG Emissions - Design Conditions

For this Filing - Annual Building GHG Emissions: *8199.8 Tons*

For this filing - describe how building energy performance has been integrated into project planning, design, and engineering and any supporting analysis or modeling:

Energy modeling will be utilized throughout the process of the design. The design options will be analyzed for energy savings and energy cost savings at 100% SD, 100% DD, and 100% CD.

Describe building specific passive energy efficiency measures including orientation, massing, envelop, and systems:

It is expected that premium motors will be used in the mechanical, electrical, and plumbing systems and other mechanical equipment such as elevators (where applicable).
Energy Recovery has been included to incorporate energy and waste-heat savings.
Occupancy sensors will be applied throughout the building
Daylighting controls are expected to be used where feasible
High performance fixtures such as LED (light emitting diodes) will be installed throughout the project
Lighting controls will enable controllability and energy savings throughout
Energy Star appliance will be specified where applicable
HVAC equipment will be design to maximize efficiency and exceed code standard

Describe building specific active energy efficiency measures including equipment, controls, fixtures, and systems:

The water-source heat pumps with electronically commutated motors enable the greatest savings for the building. The building's energy efficient fans, lighting, hot water, and space cooling contribute most significantly to the total building energy savings.

Describe building specific load reduction strategies including on-site renewable, clean, and energy storage systems:

Currently, these systems are being reviewed for inclusion into the design. Further analysis will be performed as the project and budget progress.

Describe any area or district scale emission reduction strategies including renewable energy, central energy plants, distributed energy systems, and smart grid infrastructure:

The team did not utilize a plant outside of the building beyond electricity from the available grid. Should the grid become a smart grid, the building will be enabled to adapt to that technology.

Describe any energy efficiency assistance or support provided or to be provided to the project:

The team will be meeting with Eversource and National Grid to determine and finalize the options for rebates and incentives for technologies and controls in the building.

## B.2 - GHG Reduction - Adaptation Strategies

Describe how the building and its systems will evolve to further reduce GHG emissions and achieve annual carbon net zero and net positive performance (e.g. added efficiency measures, renewable energy, energy storage, etc.) and the timeline for meeting that goal (by 2050):

The current systems are reliant on an efficient form of electricity from the grid, which is has reduced its emissions by more than 15% over the past 5 years. This trend is likely to continue with regulations, and in addition, the outside roof areas are structurally sound for the implementation of solar in the future.

---

## C - Extreme Heat Events

Annual average temperature in Boston increased by about 2˚F in the past hundred years and will continue to rise due to climate change. By the end of the century, the average annual temperature could be 56° (compared to 46° now) and the number of days above 90° (currently about 10 a year) could rise to 90.

### C.1 – Extreme Heat - Design Conditions

| | | | |
|---|---|---|---|
| Temperature Range - Low: | *7 Deg.* | Temperature Range - High: | *91 Deg.* |
| Annual Heating Degree Days: | 5512 | Annual Cooling Degree Days | 776 |

What Extreme Heat Event characteristics will be / have been used for project planning

| | | | |
|---|---|---|---|
| Days - Above 90°: | *9* | Days – Above 100°: | *0* |
| Number of Heatwaves / Year: | *10* | Average Duration of Heatwave (Days): | *3* |

Describe all building and site measures to reduce heat-island effect at the site and in the surrounding area:

Highly-reflective roof and paving materials, large proportion of green space, green roofs, etc.

### C.2 - Extreme Heat – Adaptation Strategies

Describe how the building and its systems will be adapted to efficiently manage future higher average temperatures, higher extreme temperatures, additional annual heatwaves, and longer heatwaves:

The building will include high performance heating, cooling, and ventilation, lighting controls, building system controls, healthy/resilient materials, and energy recovery.

Describe all mechanical and non-mechanical strategies that will support building functionality and use during extended interruptions of utility services and infrastructure including proposed and future adaptations:

The building will be provided with emergency generator sized for life safety systems.

---

## D - Extreme Precipitation Events

From 1958 to 2010, there was a 70 percent increase in the amount of precipitation that fell on the days with the heaviest precipitation. Currently, the 10-Year, 24-Hour Design Storm precipitation level is 5.25”. There is a significant probability that this will increase to at least 6” by the end of the century. Additionally, fewer, larger storms are likely to be accompanied by more frequent droughts.

## D.1 – Extreme Precipitation - Design Conditions

| | |
|---|---|
| 10 Year, 24 Hour Design Storm: | *8.83 In.* |

Describe all building and site measures for reducing storm water run-off:

The proposed stormwater system is anticipated to be design to collect and infiltrate the first 1.25 inches of runoff to meet BWSC requirements.

## D.2 - Extreme Precipitation - Adaptation Strategies

Describe how site and building systems will be adapted to efficiently accommodate future more significant rain events (e.g. rainwater harvesting, on-site storm water retention, bio swales, green roofs):

The Proponent will coordinate closely with BWSC as the design of the stormwater system advances.

---

## E – Sea Level Rise and Storms

Under any plausible greenhouse gas emissions scenario, sea levels in Boston will continue to rise throughout the century. This will increase the number of buildings in Boston susceptible to coastal flooding and the likely frequency of flooding for those already in the floodplain.

| | | | |
|---|---|---|---|
| Is any portion of the site in a FEMA SFHA? | ***Yes*** */ No* | What Zone: | A, **AE,** AH, AO, AR, A99, V, VE |
| | | Current FEMA SFHA Zone Base Flood Elevation: | ***18.5-19.5*** *Ft BCB* |

| | |
|---|---|
| Is any portion of the site in a BPDA Sea Level Rise - Flood Hazard Area? Use the online BPDA SLR-FHA Mapping Tool to assess the susceptibility of the project site. | ***Yes*** */ No* |

---

***If you answered YES to either of the above questions, please complete the following questions.***
***Otherwise you have completed the questionnaire; thank you!***

---

## E.1 – Sea Level Rise and Storms – Design Conditions

Proposed projects should identify immediate and future adaptation strategies for managing the flooding scenario represented on the BPDA Sea Level Rise - Flood Hazard Area (SLR-FHA) map, which depicts a modeled 1% annual chance coastal flood event with 40 inches of sea level rise (SLR). Use the online BPDA SLR-FHA Mapping Tool to identify the highest Sea Level Rise - Base Flood Elevation for the site. The Sea Level Rise - Design Flood Elevation is determined by adding either 24" of freeboard for critical facilities and infrastructure and any ground floor residential units OR 12" of freeboard for other buildings and uses.

| | | | |
|---|---|---|---|
| Sea Level Rise - Base Flood Elevation: | ***19.4*** *Ft BCB* | | |
| Sea Level Rise - Design Flood Elevation: | ***20.4*** *Ft BCB* | First Floor Elevation: | ***21.5*** *Ft BCB* |
| Site Elevations at Building: | ***Varies*** *Ft BCB* | Accessible Route Elevation: | ***Varies*** *Ft BCB* |

Describe site design strategies for adapting to sea level rise including building access during flood events, elevated site areas, hard and soft barriers, wave / velocity breaks, storm water systems, utility services, etc.:

The site is elevated via stepped landscaping from the sea wall up to 21.5 ft BCB.

Describe how the proposed Building Design Flood Elevation will be achieved including dry / wet flood proofing, critical systems protection, utility service protection, temporary flood barriers, waste and drain water back flow prevention, etc.:

The DFE will be achieved via site grading.

Describe how occupants might shelter in place during a flooding event including any emergency power, water, and waste water provisions and the expected availability of any such measures:

TBD

Describe any strategies that would support rapid recovery after a weather event:

Waterfront landscaping will be designed to assist in stormwater collection from the upland areas. Where possible, stormwater from Project Site will be directed to this area to slow its entry into storm systems and limit storm-related flooding. Permeable paving along streets in planting zones and where possible at plazas and along Turbine Alley will be included to decrease runoff.

### E.2 – Sea Level Rise and Storms – Adaptation Strategies

Describe future site design and or infrastructure adaptation strategies for responding to sea level rise including future elevating of site areas and access routes, barriers, wave / velocity breaks, storm water systems, utility services, etc.:

The Project is targeting a minimum FFE of 21.5 BCB for all uses, which is above the highest recommended SLR-DFE of 21.4 BCB and over two feet above the SLR-BFE of 19.4 BCB. This strategy is anticipated to protect the Site from flooding due to the 1% annual chance flood through 2070.

Describe future building adaptation strategies for raising the Sea Level Rise Design Flood Elevation and further protecting critical systems, including permanent and temporary measures:

Should flooding at the Site become problematic earlier than projected, steps will be taken to elevate critical systems.

A pdf and word version of the Climate Resiliency Checklist is provided for informational use and off-line preparation of a project submission. NOTE: Project filings should be prepared and submitted using the online Climate Resiliency Checklist.

For questions or comments about this checklist or Climate Change best practices, please contact: John.Dalzell@boston.gov

# Article 80 – Accessibility Checklist

## A requirement of the Boston Planning & Development Agency (BPDA)
## Article 80 Development Review Process

The Mayor's Commission for Persons with Disabilities strives to reduce architectural, procedural, attitudinal, and communication barriers that affect persons with disabilities in the City of Boston. In 2009, a Disability Advisory Board was appointed by the Mayor to work alongside the Commission in creating universal access throughout the city's built environment. The Disability Advisory Board is made up of 13 volunteer Boston residents with disabilities who have been tasked with representing the accessibility needs of their neighborhoods and increasing inclusion of people with disabilities.

In conformance with this directive, the BDPA has instituted this Accessibility Checklist as a tool to encourage developers to begin thinking about access and inclusion at the beginning of development projects, and strive to go beyond meeting only minimum MAAB / ADAAG compliance requirements. Instead, our goal is for developers to create ideal design for accessibility which will ensure that the built environment provides equitable experiences for all people, regardless of their abilities. As such, any project subject to Boston Zoning Article 80 Small or Large Project Review, including Institutional Master Plan modifications and updates, must complete this Accessibility Checklist thoroughly to provide specific detail about accessibility and inclusion, including descriptions, diagrams, and data.

For more information on compliance requirements, advancing best practices, and learning about progressive approaches to expand accessibility throughout Boston's built environment. Proponents are highly encouraged to meet with Commission staff, prior to filing.

### Accessibility Analysis Information Sources:

### Glossary of Terms:

1. ***Accessible Route*** – A continuous and unobstructed path of travel that meets or exceeds the dimensional and inclusionary requirements set forth by MAAB 521 CMR: Section 20
2. ***Accessible Group 2 Units*** – Residential units with additional floor space that meet or exceed the dimensional and inclusionary requirements set forth by MAAB 521 CMR: Section 9.4
3. ***Accessible Guestrooms*** – Guestrooms with additional floor space, that meet or exceed the dimensional and inclusionary requirements set forth by MAAB 521 CMR: Section 8.4
4. ***Inclusionary Development Policy (IDP)*** – Program run by the BPDA that preserves access to affordable housing opportunities, in the City. For more information visit: http://www.bostonplans.org/housing/overview
5. ***Public Improvement Commission (PIC)*** – The regulatory body in charge of managing the public right of way. For more information visit: https://www.boston.gov/pic
6. ***Visitability*** – A place's ability to be accessed and visited by persons with disabilities that cause functional limitations; where architectural barriers do not inhibit access to entrances/doors and bathrooms.

**Article 80 | ACCESSIBILTY CHECKLIST**

## 1. Project Information:

*If this is a multi-phased or multi-building project, fill out a separate Checklist for each phase/building.*

| | |
|---|---|
| Project Name: | **L Street Station Redevelopment** |
| Primary Project Address: | **776 Summer Street, Boston, MA 02127** |
| Total Number of Phases/Buildings: | **3 Phases / 12 Buildings** |
| Primary Contact (Name / Title / Company / Email / Phone): | **Ralph Cox / Principle / Redgate ralph.cox@redgate-re.com / (617) 904-7000** |
| Owner / Developer: | **HRP 776 Summer Street, LLC** |
| Architect: | **Stantec** |
| Civil Engineer: | **VHB** |
| Landscape Architect: | **Stoss** |
| Permitting: | **VHB** |
| Construction Management: | **TBD** |

At what stage is the project at time of this questionnaire? Select below:

| | | | |
|---|---|---|---|
| | PNF / Expanded PNF Submitted | **Draft / Final Project Impact Report Submitted** | BPDA Board Approved |
| | BPDA Design Approved | Under Construction | Construction Completed: |

| | |
|---|---|
| Do you anticipate filing for any variances with the Massachusetts Architectural Access Board (MAAB)? ***If yes,*** identify and explain. | *TBD* |

## 2. Building Classification and Description:

*This section identifies preliminary construction information about the project including size and uses.*

What are the dimensions of the project?

| | | | |
|---|---|---|---|
| Site Area: | **15 acres** | Building Area: | ***1.93 MSF*** |
| Building Height: | ***210 FT.*** | Number of Stories: | **Varies** |
| First Floor Elevation: | **21.5** | Is there below grade space: | ***Yes** / No* |

What is the Construction Type? (Select most appropriate type)

| | | | | |
|---|---|---|---|---|
| | **Wood Frame** | **Masonry** | **Steel Frame** | **Concrete** |

What are the principal building uses? (IBC definitions are below – select all appropriate that apply)

| | | | | |
|---|---|---|---|---|
| | Residential – One - Three Unit | **Residential - Multi-unit, Four +** | Institutional | Educational |
| | **Business** | **Mercantile** | Factory | Hospitality |
| | Laboratory / Medical | **Storage, Utility and Other** | | |
| List street-level uses of the building: | *Civil/Cultural, Retail, Residential, Office, Hotel, Parking,* | | | |

3. Assessment of Existing Infrastructure for Accessibility:

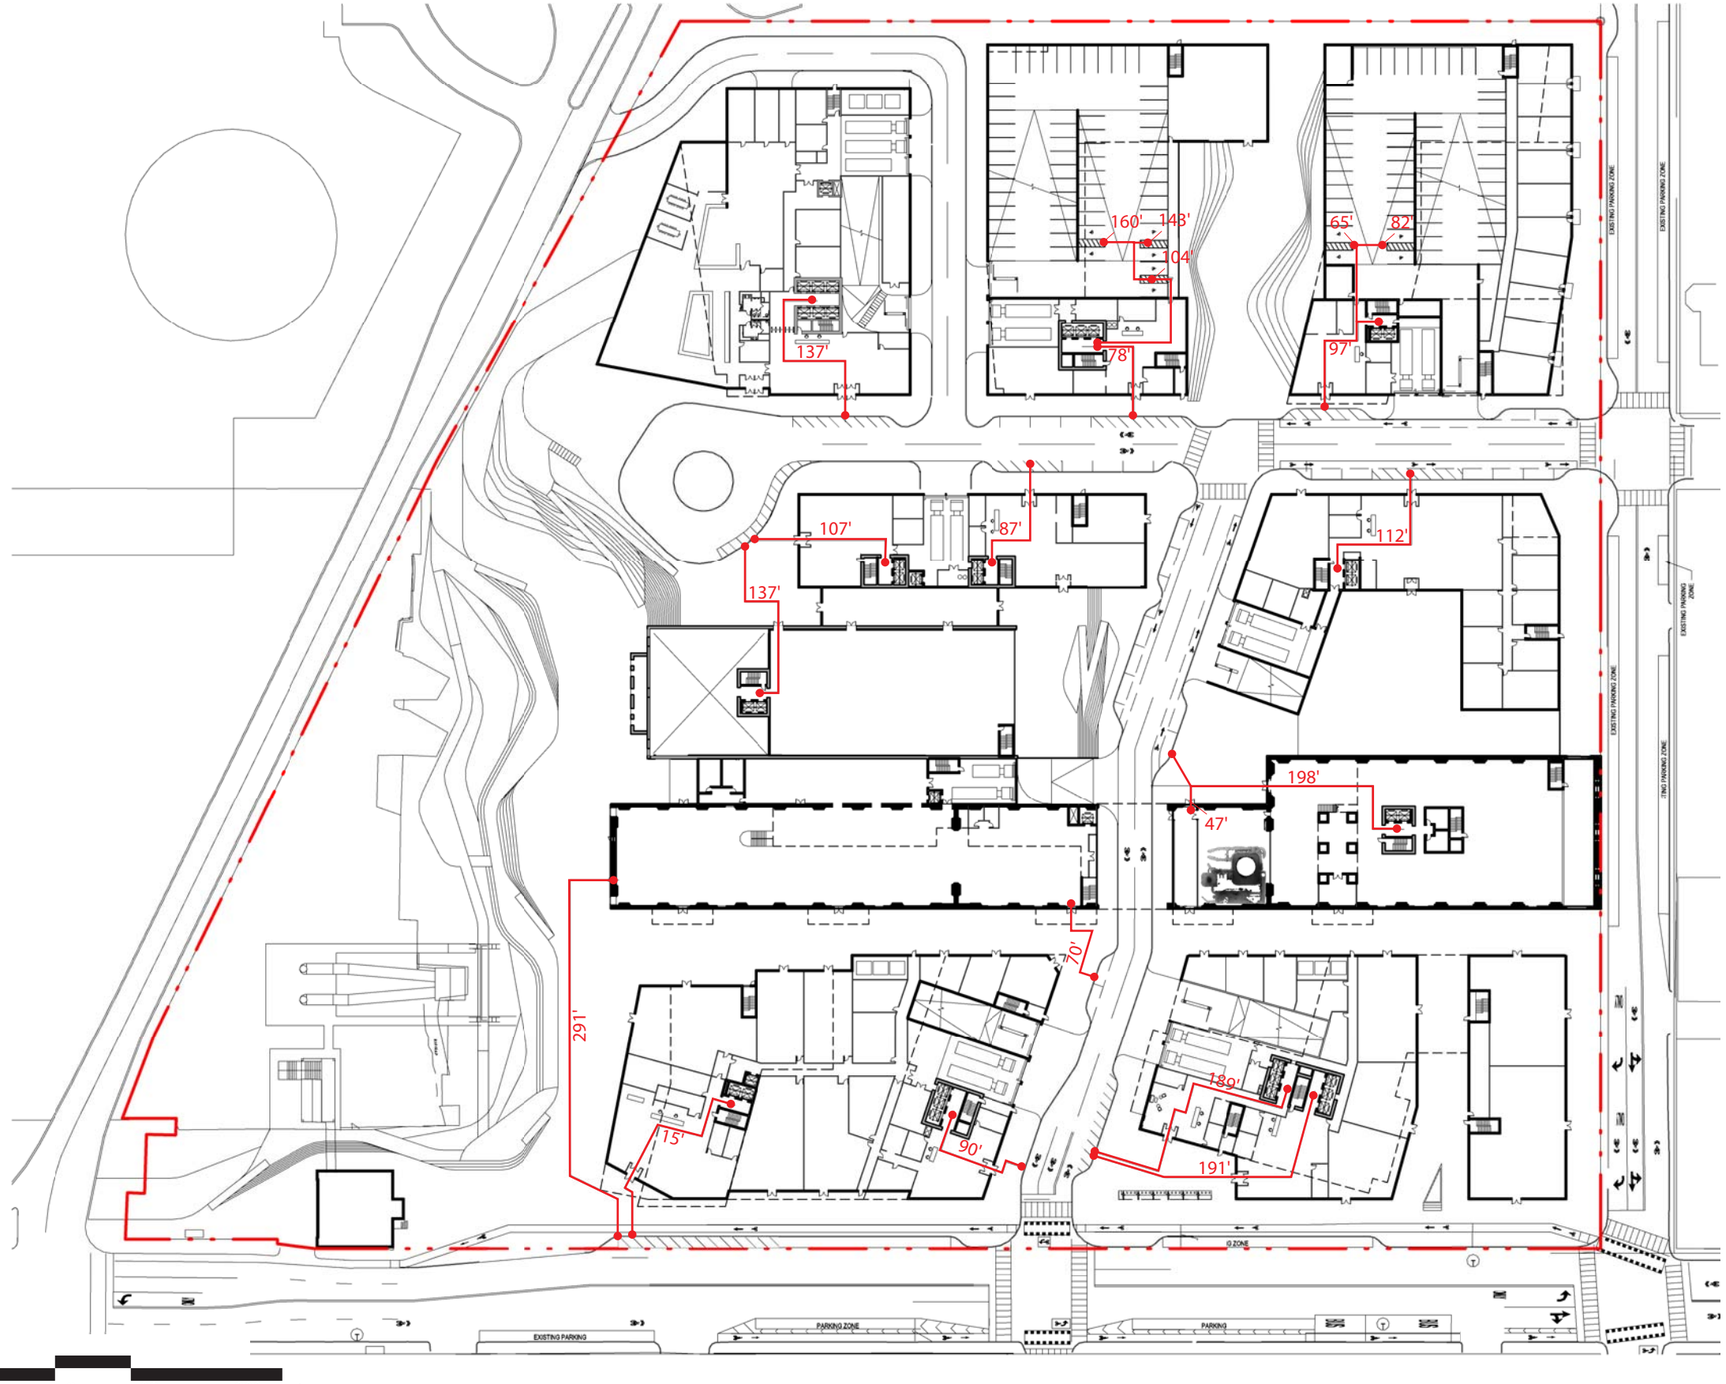
*This section explores the proximity to accessible transit lines and institutions, such as (but not limited to) hospitals, elderly & disabled housing, and general neighborhood resources. Identify how the area surrounding the development is accessible for people with mobility impairments and analyze the existing condition of the accessible routes through sidewalk and pedestrian ramp reports.*

| | |
|---|---|
| Provide a description of the neighborhood where this development is located and its identifying topographical characteristics: | **The Project is located at the gateway to the South Boston neighborhood between the marine industrial uses of the South Boston Designated Port Area and Raymond L. Flynn Marine Industrial Park to the north and east, and residential areas to the south. The Project is bounded by East 1st Street to the south and Summer Street to the west. The Project Site features considerable grade changes throughout the site, ranging from 14.5 to 36.5 feet BCB.** |
| List the surrounding accessible MBTA transit lines and their proximity to development site: commuter rail / subway stations, bus stops: | **The Project is located 0.5 miles from the Silver Line at Design Center Place, and 1.5 miles to South Station, which provides access to the Red Line, Silver Line, commuter and passenger rails, Amtrak, and local and regional bus service. The Project Site is also located along the following local bus routes:**<br>**-Bus #7: Adjacent to Project Site – Summer St @ E 1st St; East 1st @ M St; Summer St @ Powerhouse St**<br>**-Bus #9: Adjacent to Project Site – East 1st @ M St**<br>**-Bus #5, 10, 11: 0.2 miles from Project Site – East 1st St opposite O St.** |
| List the surrounding institutions: hospitals, public housing, elderly and disabled housing developments, educational facilities, others: | **The Project is located in proximity to the following institutions:**<br>**-Edward W. Brooke Charter School**<br>**-South Boston Catholic Academy**<br>**-Joseph P. Tynan School**<br>**-South Boston Elderly Apartments**<br>**-Boston Housing Authority** |
| List the surrounding government buildings: libraries, community centers, recreational facilities, and other related facilities: | **The following public use facilities are within proximity of the Project Site:**<br>**-Boston Public Library – South Boston Branch**<br>**-Tynan Community Center**<br>**-Christopher Lee Playground**<br>**-Medal of Honor Park** |

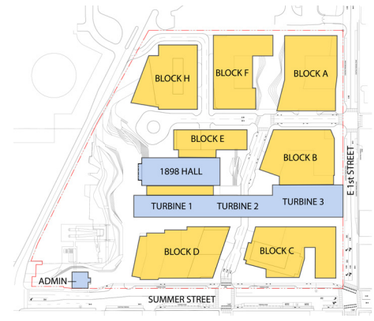
| | |
|---|---|
| **4. Surrounding Site Conditions – Existing:**<br>*This section identifies current condition of the sidewalks and pedestrian ramps at the development site.* | |
| Is the development site within a historic district? ***If yes,*** identify which district: | **No** |
| Are there sidewalks and pedestrian ramps existing at the development site? ***If yes***, list the existing sidewalk and pedestrian ramp dimensions, slopes, materials, and physical condition at the development site: | **Sidewalks are currently along Summer St and E 1st St, not within the Project Site. The existing sidewalks include concrete pavers along Summer Street and asphalt along East 1st Street.** |
| Are the sidewalks and pedestrian ramps existing-to-remain? ***If yes,*** have they been verified as ADA / MAAB compliant (with yellow composite detectable warning surfaces, cast in concrete)? ***If yes,*** provide description and photos: | **No. All existing sidewalks and pedestrian ways are to be removed and replaced. Portions of the existing sidewalks are extremely narrow and do not meet ADA requirements. Any non-compliant conditions will be improved and brought into compliance** |
| **5. Surrounding Site Conditions – Proposed**<br>*This section identifies the proposed condition of the walkways and pedestrian ramps around the development site. Sidewalk width contributes to the degree of comfort walking along a street. Narrow sidewalks do not support lively pedestrian activity, and may create dangerous conditions that force people to walk in the street. Wider sidewalks allow people to walk side by side and pass each other comfortably walking alone, walking in pairs, or using a wheelchair.* | |
| Are the proposed sidewalks consistent with the Boston Complete Street Guidelines? ***If yes***, choose which Street Type was applied: Downtown Commercial, Downtown Mixed-use, Neighborhood Main, Connector, Residential, Industrial, Shared Street, Parkway, or Boulevard. | **Yes. Proposed sidewalks along Summer Street and East 1st Street will be consistent with Boston Complete Streets Guidelines. Street Type: varies.** |
| What are the total dimensions and slopes of the proposed sidewalks? List the widths of the proposed zones: Frontage, Pedestrian and Furnishing Zone: | **Varies** |
| List the proposed materials for each Zone. Will the proposed materials be on private property or will the proposed materials be on the City of Boston pedestrian right-of-way? | **Material selection is to be determined.** |
| Will sidewalk cafes or other furnishings be programmed for the pedestrian right-of-way? ***If yes,*** what are the proposed dimensions of the sidewalk café or furnishings and what will the remaining right-of-way clearance be? | **Undetermined at this time.** |
| If the pedestrian right-of-way is on private property, will the proponent seek a pedestrian easement with the Public Improvement Commission (PIC)? | **Undetermined at this time.** |
| Will any portion of the Project be going through the PIC? ***If yes,*** identify PIC actions and provide details. | **Undetermined at this time.** |

| | |
|---|---|
| **6. Accessible Parking:**<br>*See Massachusetts Architectural Access Board Rules and Regulations 521 CMR Section 23.00 regarding accessible parking requirement counts and the Massachusetts Office of Disability – Disabled Parking Regulations.* | |
| What is the total number of parking spaces provided at the development site? Will these be in a parking lot or garage? | **1,397 parking spaces including approximately 34 surface spaces located on interior streets. The remainder are in structured parking.** |
| What is the total number of accessible spaces provided at the development site? How many of these are "Van Accessible" spaces with an 8 foot access aisle? | **The Project will comply with City requirements.** |
| Will any on-street accessible parking spaces be required? ***If yes,*** has the proponent contacted the Commission for Persons with Disabilities regarding this need? | **Accessible parking spaces will be provided. The Proponents have not yet contacted the CPD regarding this need, but will do so when details of on street parking are prepared.** |
| Where is the accessible visitor parking located? | **Accessible visitor parking locations have not yet been determined.** |
| Has a drop-off area been identified? ***If yes,*** will it be accessible? | **Undetermined at this time.** |
| **7. Circulation and Accessible Routes:**<br>*The primary objective in designing smooth and continuous paths of travel is to create universal access to entryways and common spaces, which accommodates persons of all abilities and allows for visitability with neighbors.* | |
| Describe accessibility at each entryway: Example: Flush Condition, Stairs, Ramp, Lift or Elevator: | **Entries will have a combination of flush conditions, stairs, and accessible ramps.** |
| Are the accessible entrances and standard entrance integrated? ***If yes,*** *describe.* ***If no,*** what is the reason? | **Undetermined at this time.** |
| ***If project is subject to Large Project Review/Institutional Master Plan,*** describe the accessible routes way-finding / signage package. | **Such signage will be developed further into the design process.** |
| **8. Accessible Units (Group 2) and Guestrooms: (If applicable)**<br>*In order to facilitate access to housing and hospitality, this section addresses the number of accessible units that are proposed for the development site that remove barriers to housing and hotel rooms.* | |
| What is the total number of proposed housing units or hotel rooms for the development? | **1,344 residential units & 344 hotel keys** |

| | |
|---|---|
| ***If a residential development,*** how many units are for sale? How many are for rent? What is the breakdown of market value units vs. IDP (Inclusionary Development Policy) units? | 777 Rental / 567 Condominium. IDP units to be determined. |
| ***If a residential development,*** how many accessible Group 2 units are being proposed? | The number of accessible units at the Project will be determined as the Project advances into individual building design and will comply with 521 CMR |
| ***If a residential development,*** how many accessible Group 2 units will also be IDP units? ***If none***, describe reason. | TBD |
| ***If a hospitality development,*** how many accessible units will feature a wheel-in shower? Will accessible equipment be provided as well? ***If yes,*** provide amount and location of equipment. | TBD |
| Do standard units have architectural barriers that would prevent entry or use of common space for persons with mobility impairments? Example: stairs / thresholds at entry, step to balcony, others. ***If yes*****,** provide reason. | TBD |
| Are there interior elevators, ramps or lifts located in the development for access around architectural barriers and/or to separate floors? ***If yes*****,** describe: | TBD |
| 9. Community Impact:<br>*Accessibility and inclusion extend past required compliance with building codes. Providing an overall scheme that allows full and equal participation of persons with disabilities makes the development an asset to the surrounding community*. | |
| Is this project providing any funding or improvements to the surrounding neighborhood? Examples: adding extra street trees, building or refurbishing a local park, or supporting other community-based initiatives? | Sidewalk improvements will be part of the Project including new street trees and widened sidewalks. The Proponent will continue to work with the IAG to identify final mitigation commitments for the Project. |
| What inclusion elements does this development provide for persons with disabilities in common social and open spaces? Example: Indoor seating and TVs in common rooms; outdoor seating and barbeque grills in yard. Will all of these spaces and features provide accessibility? | Amenity spaces will be accessible (521 CMR compliant) including preparatory kitchen (if included in the Project) with accessible appliances and seating areas. |
| Are any restrooms planned in common public spaces? ***If yes,*** will any be single-stall, ADA compliant and designated as “Family”/ “Companion” restrooms? ***If no***, explain why not. | Yes |



| | |
|---|---|
| Has the proponent reviewed the proposed plan with the City of Boston Disability Commissioner or with their Architectural Access staff? ***If yes,*** did they approve? ***If no,*** what were their comments? | **The Project has not yet been presented to the City of Boston Mayors Commission for Persons with Disabilities Advisory Board. The Project Team will meet with the Board as the design of individual buildings advances and is fully committed to delivering a Project that is ADA compliant.** |
| Has the proponent presented the proposed plan to the Disability Advisory Board at one of their monthly meetings? Did the Advisory Board vote to support this project? ***If no,*** what recommendations did the Advisory Board give to make this project more accessible? | **The Project has not yet been reviewed by the Advisory Board.** |
| *10.* Attachments<br>*Include a list of all documents you are submitting with this Checklist. This may include drawings, diagrams, photos, or any other material that describes the accessible and inclusive elements of this project.* | |
| Provide a diagram of the accessible routes to and from the accessible parking lot/garage and drop-off areas to the development entry locations, including route distances.<br>**Refer to Exhibit B.1 – B.3** | |
| Provide a diagram of the accessible route connections through the site, including distances.<br>**Refer to Exhibit B.1 – B.3** | |
| Provide a diagram the accessible route to any roof decks or outdoor courtyard space? (if applicable)<br>**Refer to Exhibit B.1 – B.3** | |
| Provide a plan and diagram of the accessible Group 2 units, including locations and route from accessible entry.<br>**Refer to Exhibit B.1 – B.3** | |
| Provide any additional drawings, diagrams, photos, or any other material that describes the inclusive and accessible elements of this project.<br>**Refer to Exhibit B.1 – B.3** | |



This completes the Article 80 Accessibility Checklist required for your project. Prior to and during the review process, Commission staff are able to provide technical assistance and design review, in order to help achieve ideal accessibility and to ensure that all buildings, sidewalks, parks, and open spaces are usable and welcoming to Boston's diverse residents and visitors, including those with physical, sensory, and other disabilities.

For questions or comments about this checklist, or for more information on best practices for improving accessibility and inclusion, visit www.boston.gov/disability, or our office:

The Mayor's Commission for Persons with Disabilities
1 City Hall Square, Room 967,
Boston MA 02201.

Queue Length Notes:

- bike lane on east side of Summer St
- Max queueing of trucks making left turns aprox. 4
- Many (at least 6 between 8:15 - 8:30) FedEx trucks came out of garage door south of south driveway
- a little before 8:30, most of the FedEx trucks were dispatched
- Visibility was blocked to south Driveway when a truck was at red light
- queueing on Summer St NB to ~~street~~ block right turns out of freight cor (around 8:35)
  → ~~one~~ times blocked entire intersection
- the person made a R turn in the freight corridor (I did not count that person)

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

Description: L Street is very wide and during peak hours vehicles form two lanes.

# 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

Description: L Street is very wide and during peak hours vehicles form two lanes.

# 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

Description: L Street is very wide and during peak hours vehicles form two lanes.

# 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

Description: L Street is very wide and during peak hours vehicles form two lanes.

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Intersection Summary

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.

# 95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
