Intersection Summary

Area Type: Other
Cycle Length: 120
Actuated Cycle Length: 120
Offset: 0 (0%), Referenced to phase 2:SBT, Start of Green
Natural Cycle: 110
Control Type: Actuated-Coordinated
~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Splits and Phases: 7: Boardman Street & Route 1A Southbound

Intersection Summary

Area Type: CBD
Cycle Length: 159
Actuated Cycle Length: 141
Natural Cycle: 145
Control Type: Actuated-Uncoordinated
Description: WB defacto left recoded

~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.

Splits and Phases: 6: Bennington Street & Saratoga Street

Intersection Summary

Area Type: Other
Cycle Length: 145
Actuated Cycle Length: 145
Offset: 0 (0%), Referenced to phase 2:NBT and 6:SBT, Start of Yellow
Natural Cycle: 100
Control Type: Actuated-Coordinated
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 25: Wonderland MBTA Lot & N Shore Rd/Rt.1A

Intersection Summary

Area Type: Other
Cycle Length: 110
Actuated Cycle Length: 110
Offset: 25 (23%), Referenced to phase 2:WBT and 6:EBT, Start of Yellow
Natural Cycle: 150
Control Type: Actuated-Coordinated
~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 28: Route 60 (Squire Road) & Sigourney Street

Intersection Summary

Area Type: Other
Cycle Length: 110
Actuated Cycle Length: 110
Offset: 25 (23%), Referenced to phase 2:WBT and 6:EBT, Start of Yellow
Natural Cycle: 150
Control Type: Actuated-Coordinated
~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 28: Route 60 (Squire Road) & Sigourney Street

Intersection Summary

Area Type: Other
Cycle Length: 120
Actuated Cycle Length: 120
Offset: 0 (0%), Referenced to phase 2:NBT and 6:SBT, Start of Yellow
Natural Cycle: 110
Control Type: Actuated-Coordinated
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.
! Phase conflict between lane groups.

Intersection Summary

Area Type: Other
Cycle Length: 120
Actuated Cycle Length: 120
Offset: 0 (0%), Referenced to phase 2:WBT and 6:EBT, Start of Yellow
Natural Cycle: 90
Control Type: Actuated-Coordinated
~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 27: Route 60 (Squire Road) & Charger St

Intersection Summary

Area Type: Other
Cycle Length: 110
Actuated Cycle Length: 110
Offset: 25 (23%), Referenced to phase 2:WBT and 6:EBT, Start of Yellow
Natural Cycle: 150
Control Type: Actuated-Coordinated
~ Volume exceeds capacity, queue is theoretically infinite.
Queue shown is maximum after two cycles.
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 28: Route 60 (Squire Road) & Sigourney Street

Intersection Summary

Area Type: Other
Cycle Length: 100
Actuated Cycle Length: 100
Offset: 90 (90%), Referenced to phase 2:NBSB, Start of Green
Natural Cycle: 90
Control Type: Actuated-Coordinated
95th percentile volume exceeds capacity, queue may be longer.
Queue shown is maximum after two cycles.
m Volume for 95th percentile queue is metered by upstream signal.

Splits and Phases: 1: Suffolk Downs & Route 1A

Level of Service (LOS) Method: Delay & v/c (HCM 2010).
Roundabout LOS Method: Same as Sign Control.
Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement
LOS F will result if v/c > 1 irrespective of movement delay value (does not apply for approaches and intersection).
Intersection and Approach LOS values are based on average delay for all movements (v/c not used as specified in HCM 2010).
Roundabout Capacity Model: US HCM 2010.
HCM Delay Model used.

Level of Service (LOS) Method: Delay & v/c (HCM 2010).
Roundabout LOS Method: Same as Sign Control.
Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement
LOS F will result if v/c > 1 irrespective of movement delay value (does not apply for approaches and intersection).
Intersection and Approach LOS values are based on average delay for all movements (v/c not used as specified in HCM 2010).
Roundabout Capacity Model: US HCM 2010.
HCM Delay Model used.

12X	R	848	1.1	0.731	13.6	LOS B	5.6	140.9	0.06	0.32	18.7
Approach		1735	1.1	0.731	14.5	LOS B	6.0	150.9	0.05	0.41	18.3
All Vehicles		2340	1.1	1.016	28.2	LOS D	16.6	419.6	0.29	0.86	15.3

Level of Service (LOS) Method: Delay & v/c (HCM 2010).
Roundabout LOS Method: Same as Sign Control.
Vehicle movement LOS values are based on average delay and v/c ratio (degree of saturation) per movement
LOS F will result if v/c > 1 irrespective of movement delay value (does not apply for approaches and intersection).
Intersection and Approach LOS values are based on average delay for all movements (v/c not used as specified in HCM 2010).
Roundabout Capacity Model: US HCM 2010.
HCM Delay Model used.

HCS+ Capacity Analysis

Weave and Merge Capacity Analysis

Suffolk Downs

FREEWAY WEAVING WORKSHEET

General Information

Analyst	Erica Guidoboni
Agency/Company	VHB, Inc.
Date Performed	7/9/13
Analysis Time Period	Friday Evening

Site Information

Freeway/Dir of Travel	Route 1 SB at Copeland Cir.
Weaving Segment Location	Weave Segment 1 (WB)
Analysis Year	2012 Existing Conditions

Project Description *Suffolk Downs*

Inputs

Weaving configuration	One-Sided	Segment type	Freeway
Weaving number of lanes, N	2	Freeway minimum speed, S_{MIN}	15
Weaving segment length, L_S	300ft	Freeway maximum capacity, C_{IFL}	2250
Freeway free-flow speed, FFS	35 mph	Terrain type	Level

Conversions to pc/h Under Base Conditions

	V (veh/h)	PHF	Truck (%)	RV (%)	E_T	E_R	f_{HV}	f_p	v (pc/h)
V_{FF}	54	0.74	0	0	1.5	1.2	1.000	1.00	73
V_{RF}	950	0.92	2	0	1.5	1.2	0.990	1.00	1043
V_{FR}	810	0.88	2	0	1.5	1.2	0.990	1.00	930
V_{RR}	276	0.91	1	0	1.5	1.2	0.995	1.00	305
V_{NW}	378							V =	2351
V_W	1973								
VR	0.839								

Configuration Characteristics

Minimum maneuver lanes, N_{WL}	2 lc	Minimum weaving lane changes, LC_{MIN}	1973 lc/h
Interchange density, ID	0.0 int/mi	Weaving lane changes, LC_W	1973 lc/h
Minimum RF lane changes, LC_{RF}	1 lc/pc	Non-weaving lane changes, LC_{NW}	0 lc/h
Minimum FR lane changes, LC_{FR}	1 lc/pc	Total lane changes, LC_{ALL}	1973 lc/h
Minimum RR lane changes, LC_{RR}	lc/pc	Non-weaving vehicle index, I_{NW}	0

Weaving Segment Speed, Density, Level of Service, and Capacity

Weaving segment flow rate, v	2351 pc/h	Weaving intensity factor, W	0.999
Weaving segment capacity, c_w	2702 veh/h	Weaving segment speed, S	22.6 mph
Weaving segment v/c ratio	0.870	Average weaving speed, S_W	25.0 mph
Weaving segment density, D	51.9 pc/mi/ln	Average non-weaving speed, S_{NW}	15.2 mph
Level of Service, LOS	E	Maximum weaving length, L_{MAX}	12053 ft

Notes

a. Weaving segments longer than the calculated maximum length should be treated as isolated merge and diverge areas using the procedures of Chapter 13, "Freeway Merge and Diverge Segments".
b. For volumes that exceed the weaving segment capacity, the level of service is "F".

FREEWAY WEAVING WORKSHEET

General Information

Analyst	Erica Guidoboni
Agency/Company	VHB, Inc.
Date Performed	7/9/13
Analysis Time Period	Friday Evening

Site Information

Freeway/Dir of Travel	Route 1 NB at Copeland Cir.
Weaving Segment Location	Weaving Segment 3 (EB)
Analysis Year	2012 Existing Conditions

Project Description *Suffolk Downs*

Inputs

Weaving configuration	One-Sided	Segment type	Freeway
Weaving number of lanes, N	2	Freeway minimum speed, S_{MIN}	15
Weaving segment length, L_S	300ft	Freeway maximum capacity, C_{IFL}	2250
Freeway free-flow speed, FFS	35 mph	Terrain type	Level

Conversions to pc/h Under Base Conditions

	V (veh/h)	PHF	Truck (%)	RV (%)	E_T	E_R	f_{HV}	f_p	v (pc/h)
V_{FF}	178	0.88	2	0	1.5	1.2	0.990	1.00	204
V_{RF}	169	0.97	0	0	1.5	1.2	1.000	1.00	174
V_{FR}	1458	0.95	3	0	1.5	1.2	0.985	1.00	1558
V_{RR}	273	0.91	2	0	1.5	1.2	0.990	1.00	303
V_{NW}	507							V =	2239
V_W	1732								
VR	0.774								

Configuration Characteristics

Minimum maneuver lanes, N_{WL}	2 lc	Minimum weaving lane changes, LC_{MIN}	1732 lc/h
Interchange density, ID	0.0 int/mi	Weaving lane changes, LC_W	1732 lc/h
Minimum RF lane changes, LC_{RF}	1 lc/pc	Non-weaving lane changes, LC_{NW}	0 lc/h
Minimum FR lane changes, LC_{FR}	1 lc/pc	Total lane changes, LC_{ALL}	1732 lc/h
Minimum RR lane changes, LC_{RR}	lc/pc	Non-weaving vehicle index, I_{NW}	0

Weaving Segment Speed, Density, Level of Service, and Capacity

Weaving segment flow rate, v	2239 pc/h	Weaving intensity factor, W	0.901
Weaving segment capacity, c_w	2806 veh/h	Weaving segment speed, S	23.0 mph
Weaving segment v/c ratio	0.790	Average weaving speed, S_W	25.5 mph
Weaving segment density, D	48.7 pc/mi/ln	Average non-weaving speed, S_{NW}	17.2 mph
Level of Service, LOS	E	Maximum weaving length, L_{MAX}	11195 ft

Notes

a. Weaving segments longer than the calculated maximum length should be treated as isolated merge and diverge areas using the procedures of Chapter 13, "Freeway Merge and Diverge Segments".
b. For volumes that exceed the weaving segment capacity, the level of service is "F".

V_{NW}	457							V =	2097
V_W	1640								
VR	0.782								

Configuration Characteristics

Minimum maneuver lanes, N_{WL}	2 lc	Minimum weaving lane changes, LC_{MIN}	1640 lc/h
Interchange density, ID	0.0 int/mi	Weaving lane changes, LC_W	1640 lc/h
Minimum RF lane changes, LC_{RF}	1 lc/pc	Non-weaving lane changes, LC_{NW}	0 lc/h
Minimum FR lane changes, LC_{FR}	1 lc/pc	Total lane changes, LC_{ALL}	1640 lc/h
Minimum RR lane changes, LC_{RR}	lc/pc	Non-weaving vehicle index, I_{NW}	0

Weaving Segment Speed, Density, Level of Service, and Capacity

Weaving segment flow rate, v	2097 pc/h	Weaving intensity factor, W	0.863
Weaving segment capacity, c_w	2816 veh/h	Weaving segment speed, S	23.6 mph
Weaving segment v/c ratio	0.745	Average weaving speed, S_W	25.7 mph
Weaving segment density, D	44.4 pc/mi/ln	Average non-weaving speed, S_{NW}	18.2 mph
Level of Service, LOS	E	Maximum weaving length, L_{MAX}	11305 ft

Notes

a. Weaving segments longer than the calculated maximum length should be treated as isolated merge and diverge areas using the procedures of Chapter 13, "Freeway Merge and Diverge Segments".
b. For volumes that exceed the weaving segment capacity, the level of service is "F".

FREEWAY WEAVING WORKSHEET

General Information

Analyst	Erica Guidoboni
Agency/Company	VHB, Inc.
Date Performed	7/9/13
Analysis Time Period	Saturday Afternoon

Site Information

Freeway/Dir of Travel	Route 1 NB at Copeland Cir.
Weaving Segment Location	Weaving Segment 3 (EB)
Analysis Year	2022 No-Build Conditions

Project Description *Suffolk Downs*

Inputs

Weaving configuration	One-Sided	Segment type	Freeway
Weaving number of lanes, N	2	Freeway minimum speed, S_{MIN}	15
Weaving segment length, L_S	300ft	Freeway maximum capacity, C_{IFL}	2250
Freeway free-flow speed, FFS	35 mph	Terrain type	Level

Conversions to pc/h Under Base Conditions

	V (veh/h)	PHF	Truck (%)	RV (%)	E_T	E_R	f_{HV}	f_p	v (pc/h)
V_{FF}	125	0.76	0	0	1.5	1.2	1.000	1.00	164

Host Community Agreement Boston

HOST COMMUNITY AGREEMENT

This Host Community Agreement (the "Agreement," as more particularly defined below) dated as of the 27th day of August, 2013 (the "Effective Date") is made by and between the City of Boston, Massachusetts, a municipal corporation (the "City," as more particularly defined below), acting by and through its Mayor, with a principal place of business at 1 City Hall Square, Suite 500, Boston, Massachusetts 02201 and Sterling Suffolk Racecourse, LLC, a Massachusetts limited liability company with a principal place of business at 525 William F. McClellan Highway, East Boston, Massachusetts 02128 ("Sterling Suffolk"). Capitalized terms used and not defined elsewhere in this Agreement are defined in Article I.

RECITALS

WHEREAS, the Commonwealth of Massachusetts (the "Commonwealth") on November 22, 2011 enacted "An Act Establishing Expanded Gaming in the Commonwealth," Chapter 194 of the Acts of 2011, principally codified at M.G.L. c. 23K (as may be amended from time to time, and together with any rules, regulations, policies and guidance promulgated thereunder, the "Act");

WHEREAS, the Act reflects the public policies of the Commonwealth with regard to the operation and regulation of expanded gaming as well as the public benefits to the Commonwealth and its citizens expected from a gaming project conducted in accordance with such policies, such as the creation of jobs, the generation of revenues for public purposes, and the increase of tourism and economic development within the Commonwealth;

WHEREAS, the Act established the Massachusetts Gaming Commission (the "Commission") having the authority and responsibility to select, license, oversee and regulate expanded gaming facilities in the Commonwealth;

WHEREAS, the Commission has the authority under the Act to issue not more than three Category 1 licenses to qualified applicants based on the applications submitted to the Commission;

WHEREAS, the Commission has the authority under the Act to award not more than one Category 1 license in Region A, which is defined in the Act as Suffolk, Middlesex, Essex, Norfolk and Worcester counties;

WHEREAS, the Act establishes that the Commonwealth will receive 25% of annual gross gaming revenue from a Category 1 licensee, and such revenue will be dispersed by the Commonwealth into pre-determined funds as follows: 20% to Gaming Local Aid Fund, 14% to the Education Fund, 15% to Transportation Infrastructure and Development Fund, 10% to Commonwealth Stabilization Fund, 10% to debt reduction, 9.5% to Gaming Economic Development Fund, 6.5% to Community Mitigation Fund, 5% to Public Health Trust Fund, 4.5% to Local Capital Projects Fund, 2.5% to Race Horse Development Fund, 2% to Massachusetts Cultural Council, and 1% to Massachusetts Tourism Fund;

WHEREAS, the Act provides that no applicant is eligible to receive a gaming license unless the applicant provides the Commission a signed agreement between the applicant and the municipality or municipalities, designated as a host community, in which the applicant has proposed locating a gaming establishment (a "Host Community Agreement"), which Host Community Agreement sets forth the conditions for a gaming establishment in a host community and provides for the payment by such applicant of a community impact payment to the host community to mitigate the impacts of the gaming establishment upon the host community;

WHEREAS, Sterling Suffolk is the owner of a 161 acre parcel of land (as more particularly described herein, the "Property") located in both the East Boston neighborhood (Ward 1) of the City and in the City of Revere, Massachusetts ("Revere"), as shown on the plan attached hereto as Exhibit A on which Sterling Suffolk operates Suffolk Downs, a thoroughbred horse racing facility licensed by the Commonwealth pursuant to the provisions of M.G.L. c. 128A which is licensed by the Commonwealth to conduct simulcast wagering pursuant to the provisions of M.G.L. c. 128C;

WHEREAS, Sterling Suffolk proposes to construct a resort-style destination gaming establishment on the Property consisting of (i) two distinct gaming areas providing between 150,000 and 250,000 square feet of gaming space with between 4,000 to 6,600 gaming positions (consisting of an evolving combination of slot machines and table games), (ii) a World Series of Poker™ room or rooms, (iii) two luxury hotels providing a total of 450 rooms, (iv) between 24,000 and 46,000 square feet of meeting and entertainment space, (v) bars, nightclubs and between 10 and 17 restaurants, including fine dining concepts, casual dining and a local marketplace, collectively containing between 1,700 and 2,600 seats, (vi) up to 30,000 square feet of retail space, including a spa, (vii) thoroughbred horse racing and simulcast wagering, (viii) a seven-story parking garage with up to 2,600 spaces, (ix) valet parking area for up to 460 additional vehicles, (x) up to approximately 2,100 surface parking spaces, (xi) a central utility plant, and (xii) other amenities and uses customarily accessory or ancillary to the foregoing (as the same may be approved by the City and the BRA, collectively, the "Project");

WHEREAS, Sterling Suffolk has contracted with Caesars Massachusetts Management Company, LLC, to operate the Casino portion of the Project;

WHEREAS, the Project, including the Casino, hotels and other components and amenities, will have all the superior level finishes, amenities and services provided at the highest level of casino developments in the United States and in no event any lesser quality than what is found at the Caesars Palace resort in Las Vegas, Nevada;

WHEREAS, the Project has been designed to be one of the greenest casino development projects in the United States as a result of the sustainability commitments agreed to by the Parties, all as more particularly set forth herein;

WHEREAS, the City, upon analysis, reporting and advice, has determined that the Project as planned keeps the race track at Suffolk Downs open and operational and therefore maintains jobs and a local industry, in addition to supporting related agriculture and the preservation of family farms and related open space in the Commonwealth;

WHEREAS, the portion of the Property within the City, identified as Tax Parcel 0102524000, currently generates $1,194,632.84 in annual real property taxes for the City;

WHEREAS, the Project will result in at least One Billion Dollars ($1,000,000,000) of capital investment by the Developer (as hereinafter defined) as well as at least 2,500 construction jobs and 4,000 permanent jobs, as well as indirect jobs, revenue and expenditures, including, without limitation, increased tourism and visitor-related revenue;

WHEREAS, the City is a host community for this Project as such term is defined in the Act under the Act and this Agreement is intended to be the Host Community Agreement with the City as required by the Act;

WHEREAS, although the Project is located within two host communities, the Community Impacts emanating from the Project will disproportionately burden the City as approximately 116 acres of the 161-acre Property are located in East Boston and approximately 45 acres of which are located in Revere as shown on Exhibit A, and in particular the East Boston community, as a result of the location of the Gaming establishment on the portion of the Property within the City and the related burdens resulting therefrom on the City and in particular the East Boston community, including, without limitation, as a result of construction and demolition proximate to residential neighborhoods in the East Boston community and impacts on the transportation and utility infrastructure in the City as approximately seventy percent (70%) of the traffic to the Project is expected to arrive via roads within the East Boston community in the City;

WHEREAS, the City, following an extensive review process, including extensive outreach and input from the community and analysis and input by subject matter experts engaged by the City, the City's own departmental experts, and the Host Community Advisory Committee, a five-member non-governmental body established by the Mayor, enters into this Agreement to provide for the mitigation of Project impacts as required by the Act;

WHEREAS, this Agreement recognizes and provides for the mitigation of Project impacts to the City and in particular the unique impacts on the East Boston community, which East Boston community will be most affected by the introduction of gaming into their community and subject to a disproportionally greater impact than any other community in the City during the construction period of the Project and thereafter, when the Project is open and operating in the East Boston community, including, without limitation, disproportionately greater impacts as a result of traffic, public transportation infrastructure, public safety services and construction and demolition;

WHEREAS, the Developer will pay an upfront fee to the City in the amount of Thirty-Three Million Four Hundred Thousand Dollars ($33,400,000.00) to be used by the City to support local businesses, construct a community center and improve schools and parks, all as more particularly set forth herein;

WHEREAS, the Developer will pay a minimum annual fee to the City in most years in the amount of Thirty-Two Million Dollars ($32,000,000.00) as well as a percentage of gross gaming revenues, all as more particularly set forth herein, which annual payment will cover both the real property taxes for the portion of the Property in the City and mitigation payments to enable the City to mitigate foreseen and unforeseen community impacts from the Project;

WHEREAS, the Developer's obligations to pay the upfront fee and annual fees set forth above and to comply with the terms of this Agreement are secured by, among other things, letters of credit;

WHEREAS, when the Project is operational, the Developer will use best efforts to spend a minimum of Fifty Million Dollars ($50,000,000.00) annually in goods and services from vendors and companies located in the City of Boston with specific spending requirements for vendors and companies located in East Boston, all as set forth herein;

WHEREAS, the Developer shall implement and fund a minimum of Forty-Five Million Dollars ($45,000,000.00) of traffic and public transportation improvements in the East Boston community and in Revere, all as set forth herein;

WHEREAS, the City will establish, pursuant to this Agreement, a Construction Impact Working Group (as hereinafter defined) to oversee impacts and mitigation to the City and the East Boston community during the construction of the Project;

WHEREAS, the City has or will establish the Gaming Accountability Office which will work with the community, the Construction Impact Working Group and all City impacted agencies, department, offices and commissions to review, monitor, analyze and seek compensation from the Community Impact Trust for the mitigation of impacts from the Project, including without limitation, Boston Police Department, Boston Fire Department, Emergency Medical Services, Boston Public Health Commission, Mayor's Office of Arts, Tourism and Special Events, Department of Neighborhood Development, Office of Small Business, Transportation Department, Environment and Energy Services Cabinet, Boston Public Library, Boston Centers for Youth and Families, the Commission on the Affairs for the Elderly and the Parks and Recreation Department;

WHEREAS, pursuant to the Act, if the gaming establishment is proposed to be located in a city with a population of at least 125,000 residents as enumerated by the most recent enumerated federal census, "host community" shall mean the ward in which the gaming establishment is to be located for the purpose of receiving a certified and binding vote on a ballot question at an election;

WHEREAS, the City has a population of 617,594 residents as enumerated in the 2010 United States Census and the community of East Boston (Ward 1) has a population of 40,508 as enumerated by the most recent enumerated federal census;

WHEREAS, the Project is located within Ward 1 of the City, as more particularly shown on Exhibit B; and

WHEREAS, the Act requires that the governing body of the City set a date for a vote within Ward 1 for the purpose of receiving a certified and binding vote on a ballot question;

NOW, THEREFORE, in accordance with the Act and in consideration of their mutual execution and delivery of this Agreement and other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the Parties hereby agree as follows:

I. DEFINITIONS

The following terms are expressly defined as follows:

(a) "121A Approvals" means any and all agreements and approvals from the City and/or the BRA necessary to allow the Project to qualify for alternative tax payments pursuant to M.G.L. c. 121A and the regulations promulgated thereunder and the Massachusetts Acts and Resolves of 1960, Chapter 652, as amended (collectively, "M.G.L. c. 121A"), including, without limitation, the application by the Developer or its designee for authorization and approval of the Project as a Redevelopment Project pursuant to M.G.L. c. 121A, a Regulatory Agreement by and between the Developer or its designee and the BRA, and the 6A Agreement by and between the Developer or its designee and the City.

(b) "6A Agreement" means the agreement between the City and Sterling Suffolk or its designee under M.G.L. c. 121A, § 6A. The payments due and owing under the 6A Agreement shall include payments to be made by the Developer or its designee to the City, including, but not limited to, the Developer's Upfront Community Impact Fee and Annual Host Community Agreement Fee payments.

(c) "Acquiring Party" shall have the meaning ascribed to it in Exhibit Q of this Agreement.

(d) "Act" shall have the meaning ascribed to it in the recitals of this Agreement.

(e) "Additional Annual Host Community Agreement Fee" shall have the meaning ascribed to it in Section IV.C. of this Agreement.

(f) "Affiliate" means a Person in which a cumulative total of more than fifty percent (50%) of the beneficial interests are owned, directly or indirectly, by the owners of the beneficial interests in the Developer, as of the Effective Date, a trust or trust for the benefit of their immediate family members, or their respective heirs at law. Notwithstanding the foregoing, the term "Affiliate" shall include any publicly-traded company that directly or indirectly owns more than fifty percent (50%) of the Developer, and the direct and indirect subsidiaries of such publicly-traded company, but shall not include any direct or indirect shareholder or director of such publicly-traded company or any Affiliate of such shareholder or director of such publicly-traded company (other than the publicly-traded company and the direct and indirect controlled subsidiaries of such publicly-traded company).

(g) "Agreement" means this Host Community Agreement including all exhibits and schedules attached hereto, as the same may be reopened from time to time in accordance with the terms herein.

(h) "Annual Host Community Agreement Fee" shall have the meaning ascribed to it in Section IV.C. of this Agreement. As noted herein, the Annual Host Community Agreement Fee shall be made payable to the City in accordance with the terms of the 6A Agreement, to the extent the 121A Approvals are granted.

(i) "Approvals" means all or any licenses, permits, approvals, consents, actions and authorizations that the Developer is required to obtain from any Governmental Authority to perform and carry out its obligations under this Agreement, including, but not limited to, the Approvals listed in Exhibit C attached hereto, the 121A Approvals (to the extent the 121A Approvals are granted by the City and the BRA) and such other permits and licenses necessary to complete the Work, and to open, operate and occupy the Property and the Project.

(j) "Authorized Lender" means any bank, insurance company or other entity (i) regularly involved in the business of making, servicing or investing in real estate mortgages or financing of personal property which is not a Finance Affiliate, including, without limitation, Bank of America, N.A., a national banking association, or (ii) that has been qualified for licensure pursuant to Sections 12 and 16 of the Act or been granted a waiver by the Commission pursuant to the Act and 205 CMR 116.03(1)c.

(k) "Authorized Mortgage" shall have the meaning ascribed to it in Exhibit Q of this Agreement.

(l) "Authorized Representatives" means a Party's employees, agents, consultants, contractors, subcontractors and representatives.

(m) "Base Annual Host Community Agreement Fee" shall have the meaning ascribed to it in Section IV.C. of this Agreement.

(n) "BRA" means the Boston Redevelopment Authority, a public body organized and existing under M.G.L. c. 121B, as amended.

(o) "Casino" means any premises on the Property wherein Gaming is conducted by the Developer pursuant to the Act or other applicable law and this Agreement, and includes all buildings, improvements, equipment and facilities developed, constructed, used, or maintained in connection with such Gaming.

(p) "Casino Year" means the one-year period beginning on January 1 of each year and ending on December 31, except that (a) the first Casino Year shall begin on the Early Opening Operations Commencement Date and end on the next succeeding December 31, and (b) the last Casino Year shall begin on the day following expiration of the preceding Casino Year and ends on the date that is the last day of the Term.

(q) "Category 1 License" shall have the same meaning ascribed to it in the Act.

(r) "City" means the City of Boston, Massachusetts, a municipal corporation with a modified Plan A form of government, as more particularly set forth in Chapter 452 of the Massachusetts Acts of 1948, as amended or modified by, among other references, Chapter 376 of the Massachusetts Acts of 1951 and Chapter 605 of the Massachusetts Acts of 1982, and all of the City's agencies, departments, offices and commissions.

(s) "City Council" means the City Council of the City.

(t) "City Representative" means the Director of the Gaming Accountability Office or such other individual that may be designated by the Mayor from time to time who is the City's authorized representative with respect to any matter related to or arising from this Agreement or the Project, and upon whose consent, approval or direction the Developer may rely as the consent, approval or direction from the City for all purposes of this Agreement.

(u) "Commission" shall have the meaning ascribed to it in the recitals of this Agreement.

(v) "Commonwealth" shall have the meaning ascribed to it in the recitals of this Agreement.

(w) "Community Impacts" means both the known and unknown direct and indirect impacts to the community from or related to the development or operation of the Project, including, without limitation, (i) increased use of City services, (ii) increased use of infrastructure, (iii) the need for additional infrastructure, (iv) the need for additional City employees, services and/or equipment, (v) increased traffic and traffic congestion, (vi) increased pollution, including air, noise, water, and light pollution, (vii) issues related to public health, safety, welfare, education and addictive behavior, (viii) loss of existing City revenue, (ix) issues related to education, businesses, and housing, (x) issues related to public safety including police, fire and emergency medical services, (xi) issues related to quality of life, (xii) increased use of City streets for parking, as well as a reduced use of public parking facilities as a result of additional parking being made available at the Project, and (xiii) costs related to mitigating other impacts to the City, its services and its residents.

(x) "Community Impact Trust" shall have the meaning ascribed to it in Section IV.D. of this Agreement.

(y) "Condemnation" means a taking of all or any part of the Project by eminent domain, condemnation or similar proceeding by a competent authority for public or quasi-public purposes.

(z) "Construction Commencement Date" shall mean the date that any material Work on the Project begins pursuant to any full or partial building permit or demolition permit issued to Developer from the City's Inspectional Service Department for any portion or component of the Project, other than any Limited Preparatory Work, provided that the Construction Commencement Date shall be not later than sixty (60) days after the date Developer first conducts any Limited Preparatory Work.

(aa) "Construction Impact Working Group" shall have the meaning ascribed to it in Section III.G. of this Agreement.

(bb) "Construction Letter of Credit" shall have the meaning ascribed to it in Article IX of this Agreement.

(cc) "Control(s)" or "Controlled" means the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of a Person, whether through the ownership of voting securities, by contract or otherwise, as such terms are used by and interpreted under federal securities laws, rules and regulations.

(dd) "CPI" shall mean the United States Department of Labor, Bureau of Labor Statistics, Consumer Price Index for all Urban Consumers, Boston-Brockton-Nashua, MA-NH-ME-CT All Items, 1982-84=100. In the event that the United States Department of Labor shall cease to promulgate the CPI, the Developer and the City shall agree to meet and discuss in good faith the adoption of the commonly accepted alternative to the CPI for the purposes hereof.

(ee) "Damage Period" shall have the meaning ascribed to it in Section VIII.D. of this Agreement.

(ff) "Developer" means Sterling Suffolk, any designee of Sterling Suffolk under the 121A Approvals (to the extent the 121A Approvals are granted), the Operator, and each parties respective successors or assigns as permitted hereunder.

(gg) "Development Process Cost Fees" means, to the extent not otherwise previously paid by the Developer to the City, whether directly or indirectly, a fee to reimburse the City for the aggregate amount of any and all costs and expenses in good faith paid or incurred by the City and its agencies, including, without limitation, the BRA and the City's Public Health Commission, to third parties (including attorneys, accountants, consultants, engineers and others) in connection with the planning, preparation and negotiation of this Agreement, the enforcement of this Agreement, the Election, the planning, development, ownership, management and operation of the Project, and the issuance of a Category 1 License to the Developer and any renewals thereof; provided, however, that notwithstanding anything to the contrary contained herein, Development Process Cost Fees shall not include costs and fees incurred by the City arising from or related to the City's breach of its obligations under this Agreement or the gross negligence or willful misconduct of the City or its Authorized Representatives.

(hh) "Development Dispute Cost Fees" means, to the extent not otherwise previously paid by the Developer to the City, whether directly or indirectly, a fee to reimburse the City for the aggregate amount of any and all reasonable costs and expenses (including, without limitation, attorneys' fees) in good faith paid or incurred by the City and its agencies, including, without limitation, the BRA and the Public Health Commission, in enforcing this Agreement and in defending lawsuits brought by third parties against the City and its employees and agencies as a result of the Project, the

Election and/or any approvals granted by the City or its agencies for any portion of the Project; provided, however, that notwithstanding anything to the contrary contained herein, Development Dispute Cost Fees shall not include costs and fees incurred by the City arising from or related to the City's breach of its obligations under this Agreement or the gross negligence or willful misconduct of the City or its Authorized Representatives.

(ii) "Direct or Indirect Interest" means an interest in an entity held directly or an interest held indirectly through interests in one or more intermediary entities connected through a chain of ownership to the entity in question, taking into account dilutive effect of the interests of others in such intermediary entities.

(jj) "Dispute" means any claim, demand, controversy, action or cause of action between the Developer and the City arising out of or relating to the Project, this Agreement or the transactions contemplated hereby, including as a result of any Event of Default or concerning the construction, validity, performance, and interpretation of any provision of this Agreement.

(kk) "Early Opening Component" means the components of the Project set forth in Exhibit D attached hereto of this Agreement.

(ll) "Early Opening Operations Commencement" means the completion of the Work for the Early Opening Component, as evidenced by the issuance of a certificate of occupancy (final or temporary) for all portions of the Early Opening Component, and that portions of the Project applicable to Early Opening Component, including, without limitation, the Early Opening Transportation Improvements are complete, operational, and open for business to the general public.

(mm) "Early Opening Operations Commencement Date" means the date occurring no later than twelve (12) to fourteen (14) months after the Construction Commencement Date.

(nn) "Early Opening Transportation Improvements" means the transportation improvements identified in Exhibit E attached hereto to be completed prior to the Early Opening Operations Commencement Date.

(oo) "Effective Date" shall have the meaning ascribed to it in the preamble of this Agreement.

(pp) "Election" means the election on the ballot question as required by Section 15(13) of the Act.

(qq) "Event of Default" shall have the meaning ascribed to it in Section VIII.A. of this Agreement.

(rr) "Excise Tax" shall have the meaning ascribed to it in Exhibit K-2 of this Agreement.

(ss) "Financing" means the act, process or an instance of obtaining specifically designated funds for the Project, whether secured or unsecured, including: (i) issuing securities; (ii) drawing upon any existing or new credit facility; or (iii) contributions to capital by any Person. The Parties acknowledge and agree that this definition does not include capital contributions from any members of the Developer which may have originated from the issuance of securities by the Developer to such members, contributions to the capital of the Developer or any draws upon existing or new credit facilities of such members, so long as such capital contributions, contributions to capital and draws on credit facilities are not secured by liens or encumbrances upon any portion of the Property or the Project.

(tt) "Finance Affiliate" means any Affiliate involved in Financing all or any portion of the Project.

(uu) "Finish Work" refers to the finishes which create the internal and external appearance of the Project.

(vv) "First Class Project Standards" means, at a minimum, a Project that complies with the terms and conditions of all Approvals and Governmental Requirements of the City and the BRA, that demonstrates the creative designs and overall concept excellence and compatibility with its surroundings, as set forth in the Project plans approved by the City and the BRA prior to the Construction Commencement Date, and contains Gaming Areas, hotels and other components and amenities that meet the general standards of quality for construction, maintenance, operations and customer service in no event any lesser quality than the Caesars Palace resort in Las Vegas, Nevada as of the Effective Date.

(ww) "Force Majeure" shall have the meaning ascribed to it in Article XV of this Agreement.

(xx) "Full Build-Out Component" means the components of the Project set forth in Exhibit F attached hereto and all other components of the Project not included in Early Opening Component with the exception of the second hotel.

(yy) "Full Build-Out Operations Commencement" means the completion of the Work for the Full Build-Out Component, as evidenced by the issuance of a certificate of occupancy (final or temporary) for all portions of the Full Build-Out Component, and that all portions of the Project applicable to the Full Build-Out Component, including, without limitation, the Full Build-Out Transportation Improvements, are complete, operational, and open for business to the general public.

(zz) "Full Build-Out Operations Commencement Date" or "FBOOCD" means the date occurring no later than twenty-four (24) to twenty-six (26) months after the Construction Commencement Date.

(aaa) "Full Build-Out Transportation Improvements" means the transportation improvements identified in Exhibit E to be completed prior to the Full Build-Out Operations Commencement Date.

(bbb) "GAAP" means generally accepted accounting principles set forth in the opinions and pronouncements of the Accounting Principles Board and the American Institute of Certified Public Accountants and statements and pronouncements of the Financial Accounting Standards Board or in such other statements by such other entities as may be approved by a significant segment of the accounting profession for use in the United States, which are applicable to the circumstances as of the date of determination.

(ccc) "Gaming" shall have the same definition as in the Act, or any after enacted law which allows for other forms of gaming such as internet based gaming or sports betting; provided, however, that Gaming shall not include pari-mutuel wagering such as is currently authorized at the Property under M.G.L. c. 128A and c. 128C notwithstanding the possibility that those chapters may be amended or reenacted in the future.

(ddd) "Gaming Accountability Office" shall have the meaning ascribed to it in Section III.F. of this Agreement.

(eee) "Gaming Area" means the spaces where Gaming occurs.

(fff) "Gaming Authority" means all agencies, authorities, and instrumentalities of the City, Commonwealth, or the United States, or any subdivision thereof, having jurisdiction over the Gaming or related activities at the Casino, including, without limitation, the Commission or its successor and the Gaming Accountability Office or its successor.

(ggg) "Governmental Authority" means any federal, state, county or municipal governmental authority, including, without limitation, all executive, legislative, judicial and administrative departments and bodies thereof (including any Gaming Authority) and their successors or assigns having jurisdiction over the Developer and/or the Project.

(hhh) "Governmental Requirements" means the Act and all laws, ordinances, statutes, regulations, executive orders, rules, policies, zoning requirements, Approvals and agreements of any Governmental Authority that are applicable to the Project.

(iii) "Gross Revenue" or "Gross Gaming Revenue" shall have the same meaning as given to such term in the Act, but shall also specifically include, to the extent permitted by the Commonwealth at any time in the future, gross revenues attributable to the Developer's Category 1 License or the Project and received by the Developer or its Affiliates from internet-based gaming, sports betting or any other forms of gaming authorized by laws enacted after the Effective Date; provided, however, that Gaming shall not include pari-mutuel wagering such as is currently authorized at the Property under M.G.L. c. 128A and c. 128C notwithstanding the possibility that those chapters may be amended or reenacted in the future.

(jjj) "Host Community Agreement" shall have the meaning ascribed to it in the recitals of this Agreement.

(kkk) "Host Community Agreement Letter of Credit" shall have the meaning ascribed to it in Article IX of this Agreement.

(lll) "Letter of Credit Standards" shall have the meaning ascribed to it in Article IX of this Agreement.

(mmm) "Letters of Credit" shall have the meaning ascribed to it in Article IX of this Agreement.

(nnn) "Limited Preparatory Work" shall mean Work undertaken for the purpose of facilitating the Developer's efforts to complete construction of the Project at the earliest possible date and thereby limit the Project's construction impacts on the community that is (a) Work in the nature of construction staging and mobilization, (b) Work undertaken to maintain or improve the existing racing facility (but not grandstand renovations), (c) Work that is solely interior demolition, abatement or other such interior preparatory Work, (d) Work that is demolition of the minor satellite administrative building in the parking lot of the Property, (e) to the extent approved by the City in its sole discretion, Work that is site preparatory work, or (f) any other early Work that precedes groundbreaking, demolition or foundation work at the Property that is otherwise approved by the City in its sole discretion.

(ooo) "Major Condemnation" means a Condemnation either of (i) the entire Project or (ii) a portion of the Project if, as a result of the Condemnation, the Parties mutually agree that it would be impossible or unfeasible to continue to operate the Project consistent with the First Class Project Standards even after making all reasonable repairs and restorations.

(ppp) "Material Adverse Effect" means any change, effect, occurrence or circumstances (each, an "Event" and collectively, "Events") that is outside of the Developer's reasonable control and, individually or in the aggregate with other Events, is or would reasonably be expected to be materially adverse to the condition (financial or otherwise), business, operations, prospects, properties, assets, cash flows or results of operations of the Project or the Developer, taken as a whole; provided, however, that none of the following should be taken into account in determining whether a Material Adverse Effect has occurred or would reasonably be expected to occur: (i) any Event in the United States or global economy generally, including Events related to world financial or lending markets, or change affecting generally the industry in which the Developer operates; (ii) any changes or proposed changes in GAAP or any applicable law; and (iii) the Developer's lack of funds, except in the case of clauses (i), (ii) or (iii) to the extent such Event(s) affect the Developer, taken as a whole, in a disproportionate manner as compared to similarly situated companies.

(qqq) "Material Project Change" means any changes to the Project that would, in the aggregate, substantially adversely increase the overall Community Impacts generated by the Project.

(rrr) "Mayor" means the Mayor of the City.

(sss) "Measurement Month" shall have the meaning ascribed to it in Exhibit K-2 of this Agreement.

(ttt) "Minor Condemnation" means any Condemnation that is not a Major Condemnation.

(uuu) "Monetary Defaults" shall have the meaning ascribed to it in Exhibit Q of this Agreement.

(vvv) "Mortgage" means a mortgage or other security instrument on all or any part of the Developer's interest in the Project.

(www) "Mortgage Default" shall have the meaning ascribed to it in Exhibit Q of this Agreement.

(xxx) "Mortgagee" means the holder or holders (including an Authorized Lender) from time to time of a Mortgage.

(yyy) "Nominee" is defined in Section III.T. of this Agreement.

(zzz) "Non-Monetary Defaults" shall have the meaning ascribed to it in Exhibit Q of this Agreement.

(aaaa) "Operational Limitations" means (a) the requirements and limitations on the Developer as set forth in this Agreement, (b) any State Direction, and (c) events of Force Majeure.

(bbbb) "Operator" shall mean any Person engaged, hired or retained by Sterling Suffolk or its permitted successors and assigns to manage and/or operate the Gaming at the Property, including, without limitation, the Casino, and such permitted successors and assigns of the Operator. As of the execution of this Agreement, the Operator is Caesars Massachusetts Management Company, LLC.

(cccc) "Parties" means the City and the Developer.

(dddd) "Person" means an individual, corporation, partnership, limited liability company, association or other entity, a trust, an unincorporated organization, or a governmental unit, subdivision, agency or instrumentality.

(eeee) "Project" shall have the meaning ascribed to it in the recitals of this Agreement.

(ffff) "Property" means the land, together with the improvements thereon, located in both the City and in Revere, as more particularly described in Exhibit G attached hereto.

(gggg) "Restricted Area" means a geographic area encompassed by a circle having a radius of fifty (50) miles with 525 William F. McClellan Highway, East Boston, Massachusetts as its center.

(hhhh) "Restricted Party" means any Person who owns a Direct or Indirect Interest in the Developer other than any Person (a) whose ownership of Developer arises from ownership of a Direct or Indirect Interest in a publicly-traded company or Caesars Entertainment Corporation, (b) who owns five percent (5%) or less of a Direct or Indirect Interest in the Developer, or (c) who owns five percent (5%) or less of a Direct or Indirect Interest in a casino facility within the Restricted Area.

(iiii) "Restore" or "Restoration" shall have the meanings ascribed to it in Section XIII.A. of this Agreement.

(jjjj) "Revere" shall have the meaning ascribed to it in the recitals of this Agreement.

(kkkk) "RFA-2" shall have the meaning ascribed to it in 205 CMR 110.00.

(llll) "RFA-2 Response" shall have the meaning ascribed to them in Section X.B.1. of this Agreement.

(mmmm) "Second Hotel Operations Commencement Date" means the date which is no more than sixty (60) months from the Construction Commencement Date, at which date the second hotel will have been completed and open for operation to the general public.

(nnnn) "State Direction" means all applicable Governmental Requirements given to the Developer by the Commonwealth, or any agency, authority or commission of the Commonwealth, including, without limitation, any written requirement or direction of such Governmental Requirements given to the Developer.

(oooo) "Sterling Suffolk" shall have the meaning ascribed to it in the preamble of this Agreement.

(pppp) "Surrounding Communities" shall have the same meaning as defined in the Act.

(qqqq) "Term" shall have the meaning ascribed to it in Section II.B. of this Agreement.

(rrrr) "Transfer" means (i) any direct or indirect sale (including agreements to sell on an installment basis), assignment, transfer, pledge, alienation, hypothecation, merger, consolidation, reorganization, liquidation, receivership, or any other disposition by operation of law or otherwise of a real or intangible property interest or ownership interest in an entity, or (ii) the creation or issuance of new or additional Direct or Indirect Interests in the ownership of any entity. Notwithstanding the foregoing, Transfer shall not include any Transfer of a Direct or Indirect Interest in a publicly-traded company.

(ssss) "Upfront Community Impact Fee" shall have the meaning ascribed to it in Section IV.B. As noted herein, the Upfront Community Impact Fee shall be made payable to the City in accordance with the terms of the 6A Agreement, to the extent the 121A Approvals are granted.

(tttt) "Work" means demolition and site preparation work at the Project Site, and construction of the improvements constituting the Project in accordance with the construction documents for the Project, including Finish Work, and includes labor, materials and equipment to be furnished by a contractor or subcontractor.

II. GENERAL PROVISIONS

A. Commission Requirements. This Agreement includes and meets the requirements for a Host Community Agreement under the Act and affirmatively and comprehensively addresses such requirements, including, without limitation, as follows:

This Agreement includes a community impact fee (as more particularly set forth in Article IV of this Agreement) and stipulations and responsibilities between the City, as a host community, and the Developer, including stipulations and mitigation of known impacts from the development and operation of the Project, including, without limitation, the gaming establishment (as defined in the Act) as more particularly set forth in Article III and Article IV of this Agreement, among other locations), all as required by Section 15(8), Section 15(14) and Section 18(14) of the Act.

The Developer will comply with state and local building codes and local ordinances and bylaws, including M.G.L. c. 30, §§ 61-62H as required by Section 15(12) of the Act, all as more particularly set forth in Section III.A., Section III.J., Section III.K., Section III.L., Section III.M., Section III.V., Section III.W., Exhibit C, Exhibit E, Exhibit H, Exhibit I-1, Exhibit I-2, Exhibit I-3 and Exhibit J of this Agreement, among other locations.

The Developer is required to promote local businesses in the City and develop cross-marketing strategies with local restaurants, small businesses, hotels, retail outlets and impacted live entertainment venues as required by Section 18(2) of the Act, as more particularly set forth in Section III.N. of this Agreement.

The Developer is required to construct a Project of high caliber with a variety of quality amenities that operates in partnership with local hotels and dining, retail and entertainment facilities as required by Section 18(5) of the Act, all as more particularly set forth in Section III.A., Section III.C., and Section III.N. and Exhibit H of this Agreement, among other locations.

The Developer and the City will take measures, in addition to those required under the Act, to address problem gaming as required by Section 18(6) of the Act, all as more particularly set forth in Section IV.F.8. and Section IV.J. of this Agreement.

The Project will meet or exceed the sustainable development principles set forth in Section 18(8) of the Act, as more particularly set forth in Section III.C. and Exhibit H of this Agreement.

The Developer will establish, fund and maintain human resource hiring and training practices that promote the development of a skilled and diverse workforce and access to promotion opportunity as set forth in Section 18(9) of the Act, as more particularly set forth in Section III.M. and Exhibit I-1, Exhibit I-2 and Exhibit I-3 of this Agreement.

The Developer will use best efforts to contract with local businesses for the provision of goods and services to the Project as required by Section 18(10) of the Act, as more particularly set forth in Section III.M. of this Agreement.

The Developer will provide a high number of quality jobs at the Project as required by Section 18(12) of the Act, as more particularly set forth in Section III.M. and Exhibit I-1, Exhibit I-2 and Exhibit I-3 of this Agreement.

The Developer will implement a marketing program for the utilization of: (i) minority business enterprises, women business enterprises and veteran business enterprises to participate as contractors in the design of the Project; (ii) minority business enterprises, women business enterprises and veteran business enterprises to participate as contractors in the construction of the Project; and (iii) minority business enterprises, women business enterprises and veteran business enterprises to participate as vendors in the provision of goods and services procured by the gaming establishment and any businesses operated as part of the gaming establishment as required by Section 18(16) of the Act, all as more particularly set forth in Section III.M., Section III.N. and Exhibit I-1 of this Agreement.

The Developer will implement a workforce development plan as required by Section 18(17) of the Act, as more particularly set forth in Section III.M and Exhibit I-1, Exhibit I-2 and Exhibit I-3 of this Agreement.

The Developer will ensure that any Operator shall comply with the Developer's obligations under this Agreement.

B. Term. The term of this Agreement shall commence on the Effective Date and shall continue until the expiration of the initial Category 1 License issued to the Developer by the Commission unless sooner terminated pursuant to the terms herein (the "Term"). The Parties acknowledge and agree that in the event that the Commission elects to renew or extend the Category 1 License beyond the initial fifteen (15) year term, the terms of this Agreement shall not automatically extend through such renewal or extended Category 1 License term. The Parties acknowledge and agree to meet at least twenty-four (24) months prior to the expiration of the Term to negotiate in good faith on a renewal or an extension of the terms of this Agreement. If the Parties are unable to reach agreement on the terms of such renewal or extension prior to the expiration of the Term, then the terms of this Agreement shall continue until such renewal or extension has been entered into by the Parties; provided, however, that during such interim period following the expiration of the Term, the Annual Host Community Agreement Fee due shall be adjusted to reflect any increase in the cost of living based upon the CPI, calculated as the average annual increase over the twelve (12) months prior to the expiration of the Term. CPI adjustments to the monthly payments of the Annual Host Community Agreement Fee shall not

be credited as prior month payments in the calculation of monthly payments in Exhibit K-1 or Exhibit K-2. To the extent the City is found to have acted in bad faith in the negotiation of a renewal or extension of the terms of this Agreement by a final, unappealable decision of a court of competent jurisdiction, the Developer shall be entitled to receive a credit on future payments due to the City equal to the actual amount paid by the Developer to the City as a result of the CPI increase.

III. THE PROJECT

A. Description of Project. The Developer shall promptly apply for, diligently pursue and obtain all Approvals necessary to design, develop, construct and operate the Project, including, without limitation, Approvals under Articles 37, 53 and 80 of the Boston Zoning Code. Until all such Approvals are obtained, the Developer shall provide the City, on the first business day of each calendar month following the execution of this Agreement, a written update on the status of all such Approvals. If any Approvals are denied or unreasonably delayed, the Developer shall provide prompt written notice thereof to the City, together with the Developer's written explanation of the circumstances causing such delay or resulting in such denial and the Developer's plans to cause such delayed or denied Approval to promptly be issued. Upon obtaining such Approvals, the Developer shall promptly commence to develop and construct the Project in material compliance with the Approvals, including, without limitation, approvals from the BRA and diligently prosecute such development and construction to completion before the Early Opening Operations Commencement Date and Full Build-Out Operations Commencement Date, as applicable. So long as Gaming is permitted by law to be conducted at the Project, the primary business to be operated at the Project shall be Gaming. The Developer shall comply with all applicable Governmental Requirements of the City and the BRA. This obligation shall include all Governmental Requirements adopted after the Effective Date which are of general application to all Persons.

As a precondition to the issuance of a building permit for any portion or component of the Project, the Developer shall deliver to the City (i) a copy of the executed construction contract between the Developer and its general contractor for the construction of such portion or component of the Project and (ii) copies of the payment and performance bonds obtained pursuant to the construction contract. The Developer shall ensure that such payment and performance bonds are maintained until, at a minimum, a final certificate of occupancy is issued by the City for such portion or component of the Project. In addition, the Developer shall provide the City with copies of any notices of default sent or received by the Developer under such construction contracts.

The Developer acknowledges and agrees that the primary Gaming Area on the Property shall be within the City at all times. Beginning at the Early Opening Operations Commencement Date, the Developer agrees to maintain and operate a Gaming Area with between 2,500 and 3,500 gaming positions (consisting of an evolving combination of slot machines and table games) on the portion of the Property located within the City. After the Full Build-Out Operations Commencement Date and throughout the remainder of the Term of this Agreement, the Developer agrees to maintain and operate between 150,000 and 250,000 square feet of Gaming Area with between 4,000 and 6,600 gaming positions (consisting of an evolving combination of slot machines and table games) and a World Series of Poker™ room or rooms on

the portion of the Property located within the City at all times. In addition, the Developer agrees that at all times the main entryway to the Project and the so-called "front door" of the Project and the Gaming Areas shall be within the City.

To the extent that future development occurs on the Property that is not included within the Project because such development will cause additional Community Impacts and/or use City infrastructure, including, without limitation, roadways, water, sewer and other utilities, the Parties acknowledge and agree that such development is not permitted to occur until the Parties amend this Agreement to address the impacts of such additional development, wherever located, on the City and its residents, pursuant to the reopener provisions set forth in Section XVI of this Agreement.

B. Performance of Work. The Developer shall ensure that all Work is performed in a good and workmanlike manner and in accordance with all Governmental Requirements and First Class Project Standards. Without limiting the generality of the foregoing sentence, the Developer shall ensure that all materials used in the construction of the Project shall be of first class quality, and the quality of the Finish Work shall meet or exceed First Class Project Standards.

C. Sustainability. The Developer shall construct, operate and maintain the Project utilizing sustainable development principles in accordance with Section 18(8) of the Act, Governmental Requirements, including Governmental Requirements generally applicable to all Persons that are adopted subsequent to the Effective Date, and all requirements imposed by the City permitting agencies in any Approvals.

In addition, the Developer agrees to implement all of the sustainability initiatives for the Project set forth in Exhibit H attached hereto.

D. Duty to Complete. The Developer shall complete the Early Opening Component and achieve Early Opening Operations Commencement not later than the Early Opening Operations Commencement Date and complete the Full Build-Out Component and achieve Full Build-Out Operations Commencement not later than the Full Build-Out Operations Commencement Date. In addition, the Developer shall complete and operate the second hotel on or before the Second Hotel Operations Commencement Date. Upon the occurrence of an event of Force Majeure, the Early Opening Operations Commencement Date, Full Build-Out Operations Commencement Date and/or the Second Hotel Operations Commencement Date shall each be extended on a day-for-day basis but only for so long as the event of Force Majeure is in effect, plus such period of time not to exceed sixty (60) days or such additional time as may be granted by the City in its reasonable discretion, in each case, as the Developer may require under the circumstances to remobilize its design and construction team, including its architect, general contractor, subcontractors and vendors of goods and services.

E. Operations.

1. The Developer agrees to diligently operate and maintain the Project and all other support facilities for the Project owned or Controlled by the Developer in accordance with all Governmental Requirements and First Class Project Standards and in compliance with this Agreement.

2. The Developer covenants that, at all times following the Early Opening Operations Commencement Date, it will, directly or indirectly: (i) continuously operate and keep open the Gaming Areas for the maximum hours permitted under Governmental Requirements and in accordance with City ordinances; (ii) continuously operate and keep open for business to the general public twenty-four (24) hours each day, every day of the calendar year, the parking component and upon their opening (at the Full Build-Out Operations Commencement Date for the first hotel and within sixty (60) months after the Construction Commencement Date for the second hotel) the hotel rooms and related hotel components; and (iii) operate and keep open for business to the general public all components (other than hotel components, parking components and Gaming Areas) in accordance with commercially reasonable hours of operation. Notwithstanding the foregoing, the Developer shall have the right from time to time in the ordinary course of business and without advance notice to City, to close portions of any component of the Project for (x) such reasonable periods of time as may be required for repairs, alterations, maintenance, remodeling, or for any reconstruction, or (y) such periods of time as may be directed by a Governmental Authority; provided, however, no such direction shall relieve the Developer of any liability as a result of such closure to the extent caused by an act or omission of the Developer in contravention of this Agreement.

3. Throughout the Term of this Agreement, the Developer shall employ one or more full-time employees to promote awareness of employment and business opportunities at the Project for City residents and businesses, including, without limitation, the job opportunities and local business, purchasing and economic development initiatives set forth below, as well as to undertake outreach to neighborhood groups in East Boston.

F. Gaming Accountability Office. The City will create the City of Boston Office of Gaming Accountability (the "Gaming Accountability Office"), a City department created by the Mayor to administer this Agreement and work closely with the Commission. The Gaming Accountability Office shall monitor the Developer's compliance with the terms of this Agreement, monitor all Gaming activities at the Property on behalf of the City, and if necessary, shall, with the assistance of the City's Corporation Counsel, notify the Developer of its failure to comply with the terms of this Agreement and pursue enforcement actions against the Developer, if necessary. The Gaming Accountability Office shall monitor, review and respond to input and participation from the community. Moreover, the Gaming Accountability Office shall also assist the City and the Community Impact Trust in the administration and disbursement of funds received by the Community Impact Trust under this Agreement, including, without limitation, the presentation of funding requests on an annual basis to the Community Impact Trust.

G. Construction Impact Working Group. There shall be a special working group (the "Construction Impact Working Group") to oversee and monitor the direct and indirect impacts of the Project on the City and the unique, particular and disproportionate impacts on the East Boston community during construction to reasonably minimize such impacts and to ensure compliance with all obligations under this Agreement by the Developer. This special working group shall be comprised of (i) representatives, designated by the Mayor, of the Gaming Accountability Office, the BRA, the City's Department of Transportation, the City's Assessing Department, the Boston Police Department, the City's Office of Neighborhood Services, the City's Department of Environmental and Energy Services, the City's Department of Neighborhood Development, the Boston Fire Department and the City's Inspectional Services Department, (ii) the duly-elected City Councilor for District One or his or her designee, (iii) the duly-elected State Representative for First Suffolk District or his or her designee, and (iv) the duly-elected State Senator from the First Suffolk District or his or her designee. The representative from the Gaming Accountability Office shall serve as chairperson of such special working group, call meetings as necessary and establish all procedures to carry-out the duties and responsibilities of this special working group.

H. Property Taxes. The Developer shall pay all real and personal property taxes assessed by the City and due and payable for the portion of the Property within the City on or before the date when due; provided, however, in the event that any taxes are assessed in addition to any obligations under the 121A Approvals, the Developer shall have the right to contest in good faith the assessment of any such taxes. The Developer shall make payments to the City as set forth in the 121A Approvals in the event that the Developer submits and the City and the BRA approves the 121A Approvals, including the 6A Agreement. To the extent that any real or personal property taxes related to the portion of the Property within the City or the Project are assessed by the City in addition to any amounts due under the 121A Approvals, the amount of any Annual Host Community Agreement Fees due from the Developer shall be reduced by the amount of such real and personal property taxes paid.

I. Motor Vehicle Excise Taxes. The Developer shall principally garage all vehicles associated with the Project on the portion of the Property within the City and pay excise taxes to the City consistent with applicable law on all vehicles owned by the Developer and used in connection with the Project on or before the date when due.

J. Approvals Related to Alcoholic Beverages and Entertainment. Approvals related to both alcoholic beverages and entertainment are to be obtained by the Developer from the appropriate governmental bodies, as provided by applicable law. The Developer shall notify the City and provide copies of any written complaints received by the Developer regarding the sale or consumption of alcohol at the Project.

K. Permit Fees. The Developer agrees to pay all the City and the BRA's permit, license and approval fees (including, without limitation, the Development Impact Project Exaction discussed in Section IV.G. below) for all aspects of the Project, as well as the reasonable, actual costs of all outside consultants retained by the City and the BRA to review the Developer's applications and assist in the preparation of such permits, licenses and approvals, such costs to be considered Development Process Cost Fees.

L. Transportation Improvements. The Developer shall implement and fund all traffic and public transportation improvements set forth in Exhibit E attached hereto, which include, without limitation, the Early Opening Transportation Improvements and Full Build-Out Transportation Improvements. The Parties acknowledge and agree that the Developer shall spend a minimum of Forty-Five Million Dollars ($45,000,000.00) on the transportation improvements set forth in Section II of Exhibit E, such costs to be exclusive of land acquisition or right of way costs. As more particularly set forth herein and in Exhibit E, the Early Opening Transportation Improvements must be completed and operational prior to the Early Opening Operations Commencement Date, and the Full Build-Out Transportation Improvements must be completed prior to the Full Build-Out Operations Commencement Date. In addition, the Developer shall comply with all requirements and obligations set forth in the Transportation Access Plan Agreement to be entered into by and between the Developer and the City's Transportation Department pursuant to Article 80 of the Boston Zoning Code.

M. Quality Job Creation/Employment. The Project will result in at least two thousand five hundred (2,500) construction jobs during construction, and at least eight hundred (800) permanent jobs during the year prior to the Early Opening Operations Commencement Date, at least two thousand two hundred twenty-five (2,225) permanent jobs as of Early Opening Operations Commencement Date, and at least four thousand (4,000) permanent jobs as of the Full Build-Out Operations Commencement Date and in every Casino Year thereafter.

The Developer agrees to comply with the job creation and employment commitments listed in Exhibit I-1, as well as with all applicable laws and regulations of Government Authorities regarding construction and permanent employment hiring and job preference requirements, including, without limitation, the Boston Residents Jobs Policy (Chapter 30 of the City Ordinances of 1983, as extended by the Mayor by Executive Order on July 12, 1985, entitled "Extending The Boston Residents Jobs Policy" and adopted as policy by the BRA by vote on July 25, 1985), the requirements of the Boston Employment Commission, established by Chapter 12 of the City's Ordinances of 1986, as amended by Chapter 17 of the City's Ordinances of 1986), as the same may be amended or modified, the Boston Residents Construction Employment Plan attached as Exhibit I-2 and the Boston Residents Employment Agreement attached hereto as Exhibit I-3.

In addition to the above, as more particularly discussed in Section IV.G. below, as part of the BRA Approvals, the Developer will be paying a Development Impact Project Exaction that will be used, in part, to fund job creation in the City.

N. Local Businesses, Purchasing and Economic Development. Following the first anniversary of the Full Build-Out Operations Commencement Date, the Developer agrees to use best efforts to purchase a minimum of Fifty Million Dollars ($50,000,000.00) in goods and services from vendors and companies located in the City, provided further than in any event the Developer shall purchase no less than Five Million Dollars ($5,000,000.00) in goods and services from vendors and companies with a principal place of business in East Boston, exclusive of Logan Airport. The Developer shall provide vendor fairs that provide City businesses with information concerning providing goods and services to the Project. The Developer shall ensure that local businesses will have the reasonable opportunity to open satellite businesses within the Project, including, without limitation, using best efforts to contract

with businesses or restaurants based within East Boston to operate within the Project, with a goal of at least five (5) such businesses or restaurants. Moreover, the Developer shall ensure that City businesses will be able to benefit from partnership programs that incentivize employees and patrons of the Project to utilize City businesses, including through the Operator's rewards program. The Developer shall also use best efforts to purchase and display art created by City residents. The Developer's obligations under this section shall be subject to the availability of goods and services reaching the First Class Project Standard and the availability of local and regional vendors satisfying the licensing and suitability requirements of the Gaming Authorities.

In addition, the Developer will create and implement a marketing program for the utilization of minority business enterprises, women business enterprises and veteran business enterprises to participate as vendors in the provision of goods and services procured by the Developer and any businesses operated as part of the Project.

The Developer will provide the City with (i) its economic development plan, which outlines how the Developer will collaborate, promote and cross-market with the Mayor's Office of Arts, Tourism and Special Events as well as the Massachusetts Cultural Council, Massachusetts Office of Travel and Tourism, Massachusetts Tourism Fund and related industries as well as collaborate, promote and cross-market with restaurants, small businesses, hotels, retail outlets and impacted live entertainment venues in the City (as required by Section 18(2) of the Act), and (ii) its marketing plans (both domestically and internationally) to draw new and existing out-of-state and international customers of the Operator to the Project, the City and the region.

O. Police. Pursuant to the requirements of Section 6(f) of the Act, the City's Police Department, as the law enforcement agency of the host community, shall enter into a memorandum of agreement with the department of state police which shall include, but not be limited to, procedures involving: (i) assignment of police officers of the host community to the gaming enforcement unit of the state police; (ii) first responder calls from the gaming establishment; (iii) emergencies occurring within the gaming establishment, including the gaming area; and (iv) criminal investigations involving employees or patrons of a gaming establishment. It is the intent of the Parties that, with the exception of criminal activity relating to the operation of a gaming establishment or relating to games or gaming that occur inside a gaming establishment (as discussed in Section 6(f) of the Act), the Boston Police Department shall continue to have the same primary jurisdiction it currently has over the portion of the Property within the City, including being the first responder to all calls from the portion of the Property within the City, handling all emergencies occurring within the portion of the Property in the City, including the Gaming Area, and handling all criminal investigations involving employees or patrons at any portion of the Property within the City. In addition, the Developer shall provide the City's Police Department with any video and technical assistance (including, without limitation, any video enhancement capability the Developer may have) and shall work with the City's Police Department during construction of the Project to place cameras in locations at the Property that the City's Police Department deems necessary to preserve and protect public safety.

P. Public Safety. The Developer acknowledges and agrees that so long as the Project is operational, in an effort to reduce the impact of the Project on the public safety services of the City and the City's Public Health Commission, (i) the Developer shall develop and implement a plan to provide on-site security, fire and life safety, and on-site emergency medical technicians as well as develop and implement an emergency management plan and an emergency response plan (as required by Section 25(j) of the Act), all as acceptable to the City's Police Commissioner, Fire Commissioner, Chief of the Emergency Medical Services Department, Director of the Office of Emergency Management, and the Executive Director of the Public Health Commission, or their designees, and (ii) all on-site security, fire and life safety, emergency medical technicians, ambulance services and emergency management services shall work closely with the corresponding City department, agency or office.

Q. Horse Racing. As required by Section 24 of the Act, the Developer, as the holder of a live racing license under M.G.L. c. 128A, shall maintain the existing racing facility on the Property, subject to the permitted increases in the number of live racing days. The Developer acknowledges and agrees that the Developer will seek the approval of the City, prior to seeking any reduction in the number of live racing days from the Commission.

R. Purchase of Slot Machines. Subject to the Developer's obligation to maintain the First Class Project Standard and to the extent required by Section 18(15) of the Act or the Commission, the Developer agrees to purchase, whenever possible, domestically manufactured slot machines for installation in the Casino.

S. State Lottery. The Developer agrees to comply with all provisions of Section 15(1) of the Act and any rules and regulations of the Commission pertaining thereto.

T. Financing. The Developer shall only be permitted to obtain Financing from an Authorized Lender. If any Direct or Indirect Interest of the Developer shall be transferred by reason of any foreclosure, deed in lieu of foreclosure or any other proceeding for enforcement of the Mortgage or any other financing document, the provisions of this Agreement shall be binding on the Mortgagee, any Nominee of the Mortgagee or any third party who acquires the Property at a foreclosure sale, and the Mortgagee, any Nominee of the Mortgagee or any subsequent third party who acquires the Property at a foreclosure sale or by a transfer in lieu thereof shall automatically agree to assume the obligations of Developer hereunder except as provided for in this Section and in Exhibit Q. As used in this Agreement, "Nominee" shall mean a Person who is designated by a Mortgagee to act in place of the Mortgagee solely for the purpose of holding title to the Project and performing the obligations of the Developer hereunder. Notwithstanding the foregoing, the City shall not have the right to terminate this Agreement as a result of a Mortgagee failing to assume the obligations of the Developer hereunder unless Mortgagee or its Nominee fails to do so within three (3) months following the Mortgagee's acquisition of the Project, it being acknowledged that Mortgagee may intend to transfer its interest in the Project to a Nominee and such Nominee shall assume the obligations of the Developer hereunder.

In no event may the Developer or any Finance Affiliate represent that the City is or in any way may be liable for the obligations of the Developer or any Finance Affiliate in connection with (i) any financing agreement or (ii) any private offering of securities. The Developer agrees to indemnify, defend and hold the City and its respective officers, directors,

agents and employees free and harmless from any and all liabilities, costs, damages, claims or expenses arising out of or related to the breach of its obligations under this Section III.T.

After the Developer has notified the City of the existence of any Financing (together with Mortgagee's address and a contact party) pursuant to Exhibit Q, then the City, upon serving the Developer with any notice of default or any other notice under the provisions of or with respect to the Agreement, at the same time shall send to the Mortgagee a duplicate copy of such notice at the address designated by such Mortgagee or the Developer pursuant to Exhibit Q by certified or registered mail, postage and registration charges prepaid, by overnight delivery service with receipt, by hand delivery, or by email with an original to follow by any of the other permitted delivery methods set forth herein. No such notice of default to the Developer shall be effective unless such duplicate copy has been sent to the Mortgagee. Any Mortgagee shall have the right to cure any default by the Developer under this Agreement within the time period prescribed by Exhibit Q to effectuate any such cure, and the City agrees to accept any performance by the Mortgagee of any obligation of the Developer under this Agreement as if the same had been performed by the Developer.

Notwithstanding anything contained herein to the contrary, in connection with any Financing, the provisions of Exhibit Q attached hereto and incorporated herein by reference shall apply.

U. Radius Restriction. Neither Developer nor any Restricted Party shall directly or indirectly: (i) manage, operate or own any equity or debt interest in any casino facility within the Restricted Area other than the Project, or (ii) make application for any franchise, permit or license to manage or operate any casino facility within the Restricted Area other than the Project. This restriction shall expire on the fifteenth (15^{th}) anniversary of the issuance of the Category 1 License to the Developer by the Commission (unless extended by the Parties pursuant to a renewal or extension of this Agreement as more particularly set forth in Section II.B. of this Agreement). The provisions of this Section shall survive any early termination of this Agreement, subject to Section XVII.S. of this Agreement.

V. Smoke Free Environment. The Developer shall ensure compliance by itself, its Authorized Representatives and its customers and invitees with the provisions of the Act, the Boston Public Health Commission policies and City Board of Health's Clean Air Works Workplace Smoking and E-Cigarette Use Regulations and M.G.L. c. 270, § 22, as the same may be supplemented and amended, which require the Project, including the Gaming Areas, to be smoke-free environments. In no event shall smoking be allowed in the Casino during the Term of this Agreement.

W. Construction Management Plan. The Developer shall develop and implement a construction management plan which details the construction schedule for the Early Opening Component and Full Build-Out Component of the Project, provides for continuous pedestrian and vehicular access to and through the Property throughout construction, establishes traffic management and parking policies during construction, prohibits construction vehicles from using local residential roads, and provides a hotline for residents to call with construction complaints. The Developer shall promptly notify the Gaming Accountability Office of all complaints received. This hotline shall be staffed appropriately to ensure that a caller is able to speak to a

person in addition to leaving a message. A draft Construction Management Plan is attached hereto as Exhibit J. A final plan must be approved by the City before construction commences. The Developer shall post a copy of the Construction Management Plan on its Project website and send a copy of the Construction Management Plan to the East Boston Branch of the Boston Public Library.

X. Increases in Car Insurance Rates. The Developer, in coordination with the Gaming Accountability Office, shall use best efforts to work with the Commonwealth's Division of Insurance to monitor, reduce or eliminate increases to car insurance rates within East Boston that are proposed as a result of this Project, including, without limitation, a safe driver educational program for all employees and the promotion of safe, unimpaired driving for all guests and patrons.

Y. Vehicles for Hire. Due to increase in use of and demand for taxi cabs and other vehicles for hire to serve the Project, the Developer shall work with the City to facilitate and mitigate the use and impact of such vehicles on the East Boston community. The City will monitor and enforce rules, regulations and operation of such vehicles.

Z. Guaranteed Ride Home Program. The Developer shall establish a guaranteed ride home program funded and implemented by the Developer to provide safe rides home for patrons whose driving may be impaired. The Guaranteed Ride Home Program shall include advertising and informing patrons of the existence of the program and training of employees at the Project with respect to the program In addition, the Developer shall implement a guaranteed ride home program for all employees as part of the Developer's Transportation Demand Management program to promote travel by alternative modes.

AA. Operational Limitations. Notwithstanding anything to the contrary in this Agreement, the Developer's obligations under this Article III shall be subject to and consistent with the Operational Limitations.

IV. MITIGATION COMMITMENTS

A. Acknowledgment of Community Impacts. The Developer recognizes and acknowledges that the construction and operation of the Project will cause Community Impacts on the City, and in particular, the East Boston community which will face a disproportionately greater impact by the Project than any other part of the City. Further, the Developer recognizes and acknowledges that the Project will require that the City, the City's Public Health Commission and other governmental units of the City provide initial and continuing mitigation of such Community Impacts so that City residents, including the additional temporary and permanent workforce and the increased number of expected visitors and increased tourism to the City related to the Project, will receive substantially the same health, safety, welfare and educational services as currently are provided to City residents and visitors. In order to mitigate the Community Impacts, the Developer agrees to provide an Upfront Community Impact Fee (described below in Section IV.B.) and an Annual Host Community Agreement Fee (described below in Section IV.C.). If the 121A Approvals are granted, in addition to the payment of the Upfront Community Impact Fee and Annual Host Community Agreement Fee, the 6A Agreement shall also include provisions for the payment of the Excise Tax.

B. Upfront Community Impact Fee. After the Commission's awarding of a Category 1 License to the Developer, the Developer agrees to pay the City Thirty Three Million Four Hundred Thousand Dollars ($33,400,000.00) (the "Upfront Community Impact Fee") payable in accordance with the provisions of the 6A Agreement if the 121A Approvals are granted. The Upfront Community Impact Fee shall be paid to the City in four equal installments of Eight Million Three Hundred Fifty Thousand Dollars ($8,350,000.00). The first installment shall be paid within thirty-five (35) days after the issuance to the Developer by the Commission of a Category 1 License. The second installment shall be paid on or before the Construction Commencement Date. The third installment shall be paid on or before the one (1) year anniversary of the payment of the second installment, and the fourth and final installment shall be paid on or before the two (2) year anniversary of the payment of the second installment. The Parties acknowledge and agree that notwithstanding anything to the contrary, the entire Upfront Community Impact Fee shall be paid prior to the Full Build-Out Operations Commencement Date and the Developer shall not be entitled to receive a certificate of occupancy from the City's Inspectional Service Department for any portion of the Full Build-Out Component of the Project unless and until the Upfront Community Impact Fee has been paid in full.

C. Annual Host Community Agreement Fee. During each year of the Term, the Developer shall pay an annual fee to the City (the "Annual Host Community Agreement Fee"). If the 121A Approvals are granted, the Annual Host Community Agreement Fee shall be payable in accordance with the 6A Agreement. The Annual Host Community Agreement Fee shall be in an amount as more particularly set forth in Exhibit K-1 attached hereto. As more particularly set forth in Exhibit K-1 and, if applicable, the 6A Agreement, the Annual Host Community Agreement Fee includes a base fee (the "Base Annual Host Community Agreement Fee") and, in certain instances, a percentage of Gross Gaming Revenues (the "Additional Annual Host Community Agreement Fee"). Such payments shall be made monthly. The method of making such payments of the Annual Host Community Agreement Fee by the Developer to the City is set forth in Exhibit K-2 attached hereto.

D. Payment of Upfront Community Impact Fee and Annual Host Community Agreement Fee. The payments by the Developer to the City of the Upfront Community Impact Fee and Annual Host Community Agreement Fee shall be paid by certified check or secure electronic funds transfer to the City.

Upon receipt of each payment of the Upfront Community Impact Fee, the entire payment shall be transferred by the City to either (a) a City-controlled bank account to be administered by the City of Boston Community Impact Trust, or (b) a special fund or such other appropriate vehicle to be established by the City in its sole discretion (collectively, the "Community Impact Trust"). The Community Impact Trust shall be administered by three Trustees. The Trustees shall be the Collector/Treasurer for the City, the Supervisor of Budgets for the City and the City Auditor for the City. The Director of the Gaming Accountability Office or his or her designee shall be an ex officio non-voting Trustee of the Trust. The Trustees shall administer the Community Impact Trust, including, but not limited to, the disbursement of funds placed in the Community Impact Trust to mitigate the Community Impacts from the Project, as further discussed below.

In the event the 121A Approvals are granted, upon receipt of an Annual Host Community Agreement Fee payment, the funds received by the City shall be transferred by the City in accordance with the 6A Agreement as follows:

1. The City shall transfer to the Community Impact Trust an amount equal to the amount set forth in Exhibit K-1 attached hereto in the column labeled "Amount to Be Transferred therefrom to Community Impact Trust Each Year."

2. The balance of the Annual Host Community Agreement Fee received by the City shall be transferred to the general fund of the City to be used by the City in accordance with the City's appropriation process.

E. Use of Upfront Community Impact Fee by the Community Impact Trust. In order to mitigate the unique, particular and unduly burdensome Community Impacts to the East Boston community during the construction period of the Project and thereafter, the Community Impact Trust will use the Upfront Community Impact Fee for the following purposes:

1. Improvements to the Mario Umana Middle School Academy located at 312 Border Street, East Boston, Massachusetts to modernize facilities and to account for potential increases in school age population.

2. East Boston Neighborhood Business Program (NBP) for support and enhancement of businesses in the East Boston community, including, without limitation, economic support for local neighborhood businesses, neighborhood beautification of East Boston, increased marketing and promotion of local businesses, and to provide other assistance to such businesses.

3. Construction of a new combined youth and senior citizens center in the East Boston community, with input from the Boston Centers for Youth and Families, the City's Commission on Affairs of the Elderly, the City's Parks and Recreation Department and the community.

4. Improvements to Noyes Park located on Boardman Street in East Boston through a public process with the City's Parks and Recreation Department.

5. Improvements to LoPresti Park located at 33 Summer Street in East Boston designed through a public process by the City's Parks and Recreation Department.

These funds will be used exclusively to mitigate Community Impacts to the East Boston community during the construction period of the Project.

F. Use of Portion of Annual Host Community Agreement Fee by the Community Impact Trust. The Parties intend that over the Term of this Agreement, funds will be disbursed by the Trustees for some or all of the following purposes to account for expected and unexpected impacts from the Project:

1. Public Safety, which funds may be used by the various public safety agencies in the following manner:

a) Boston Police Department: Funding of increased costs of routing 911 calls, costs in coordinating any efforts with the Massachusetts State Police under the memorandum of agreement referenced in Section III.O., and increased resources, costs, equipment and programs, including, without limitation, police personnel necessary due to the nature of the Project (patrol, detectives, K9 unit, narcotics, explosive ordnance unit, hazardous materials response unit, traffic), vehicles, additional cells, mobile computing devices, radios, other communications equipment and specialized officer training, which will, among other things, improve the health and safety of City residents and protect businesses and residences within the City.

b) Emergency Medical Services: Funding for the City's Public Health Commission to provide for emergency medical services and equipment, including, without limitation, full and part-time paramedics, life support equipment, radios and communications equipment, and, within East Boston, (i) the construction of a new advanced life support ambulance bay, (ii) the purchase of a new advanced life support ambulance to serve East Boston and the replacement of such ambulance as needed, and (iii) the staffing and maintenance of the ambulance bay and ambulance, all of which will, among other things, improve the health and safety of City residents and protect businesses and residences within the City.

c) Boston Fire Department: Funding of additional fire personnel and additional fire vehicles and equipment to increase both fire protection and fire inspections in the City, which will, among other things, improve the health and safety of City residents and protect businesses and residences within the City.

2. Vehicles for Hire: Due to an anticipated increase in the use of taxi cabs and vehicles for hire for the Project and the Project's 24-hour a day operation, increases in staffing may be necessary to both the uniformed and administrative personnel in the regulation of vehicles for hire by the City.

3. Small and Local Business Assistance: Funding of (a) the ongoing costs of the East Boston Neighborhood Business Program for support and enhancement of businesses in the East Boston community, including, without limitation, economic support for local neighborhood businesses, neighborhood beautification of East Boston, increased marketing and promotion of local businesses, and to provide other assistance to such businesses, and (b) the City's Department of Neighborhood Development, Office of Business Development to support existing funding programs for small and local businesses and to provide entrepreneurs and existing businesses in the City with access

to financial and technical resources, both of which will, among other things, protect and grow businesses within the City.

4. Education: In addition to those funded by the Developer, funding of (a) hospitality, entertainment and other job training programs in the public and vocational schools, particularly in partnerships with community colleges, (b) monitoring the Developer's obligations for education and job-training at vocational schools, (c) after-school programs, (d) compulsive gaming awareness programs in the public schools, and (e) capital improvements and operating costs of public schools in the district due to the potential increase in school-age population as a result of the Project.

5. Community Programs: Funding for programming, services, personnel, facilities, maintenance and equipment for the new combined youth and senior citizens center being constructed in the East Boston community and the Boston Centers for Youth and Family Paris Street Community Center and Pool, as well as funding for reduced or tuition-free programs for low-income residents at these facilities and funding for English as a second language programs, which will, among other things, respond to the needs of children and elderly in the community due to increases in population expected from the Project.

6. Transportation Department: Funding of a wayfinding signage program, targeted parking enforcement and towing with increased parking enforcement officers, vehicles and equipment, installation and maintenance of pavement markings, additional staff people in the traffic management center, interconnections of signals and cameras to the traffic management center, retiming of certain traffic signals on a rotating basis, annual traffic signal and control box upgrades, increased traffic maintenance staff, expansion of the bike share program, expansion of the bike network through dedicated or shared bike lanes, rideshare program and electric vehicle charging stations in the City, and expansion of water transportation service programs connecting key transportation hubs along the City's waterways, all to address increased costs to the City's Transportation Department as a result of the Project.

7. Parks, Neighborhood Beautification, Improvements and Maintenance: Funding for (a) the ongoing maintenance of improvements at City parks in East Boston, including Noyes and LoPresti Park, (b) the following within the East Boston community: year-round street sweeping, hand sweeping, planters and plantings, new trash and recycling receptacles, increased Department of Public Works and Inspection Services Department inspections of buildings, snow removal, anti-littering programs and the City's green ticketing program, (c) operational needs of the East Boston Neighborhood Business Program, (d) trees in City parks, streets and open spaces, (e) the interconnection of public green spaces throughout the City, all to address increased tourism and vehicular, bicycle and pedestrian use in Boston and in particular, East Boston.

8. Public Health Commission: Funding to supplement, as necessary, existing Commonwealth and City Board of Health and City Public Health Commission programs for (a) preventive programs for children, adolescents and young adults, including, without limitation, curriculum for health education, gaming addiction and prevention, and an

outreach program to parents to inform them of the risks of youth gambling, (b) problem gaming prevention strategies for college students that parallel other programs used to address substance abuse, (c) compulsive and problem gaming awareness, prevention and treatment efforts, (d) community awareness of problem gaming through signs, brochures, posters, websites and other advertising, (e) anti-smoking education, awareness and enforcement, and (f) programs addressing other addictive behavior, drug treatment, alcohol treatment and mental health services.

9. Environmental Impacts: Funding for the City's Environment Department, City's Environment and Energy Services Cabinet, Inspectional Services Department or any successor department (a) to monitor the Developer's compliance with Governmental Requirements and the sustainability and green environmental practices set forth in this Agreement, including the addition of personnel, if necessary, and (b) for personnel and equipment to enforce building, health, sanitation, code enforcement, trash and recycling storage and pick up and rodent control.

10. Boston Housing Authority: Funding of up to Twenty Million Dollars ($20,000,000.00) over the Term of this Agreement for the revitalization of Boston Housing Authority's Orient Heights housing development that abuts the Property.

11. Mayor's Office of Arts, Tourism and Special Events: Funding to foster the growth of the cultural community, promote public participation in the arts and public celebrations, especially in East Boston, and advance cultural tourism in the City, due to increased tourism and special events expected as a result of the Project.

Notwithstanding the foregoing, not less than fifty percent (50%) of the amount contributed to the Community Impact Trust over the Term of this Agreement shall be dedicated and used to fund the mitigation of Community Impacts in the East Boston community.

G. Development Impact Project Exaction. In addition to the Upfront Community Impact Fee and the Annual Host Community Agreement Fee, the Project will also require that the Developer pay a Development Impact Project Exaction, as such term is defined in Article 80B-7 of the City's Zoning Code, as part of the Developer's Approvals from the BRA under Article 80B of the City's Zoning Code, which exaction will provide funds to the Neighborhood Housing Trust to fund affordable housing and the Neighborhood Jobs Trust to fund job creation within the City. Based upon information provided by the Developer, the Developer anticipates that the aggregate Development Impact Project Exaction to be paid by the Developer will be in excess of Eight Million Dollars ($8,000,000.00).

H. Horse Racing Related Revenues. Nothing in this Agreement shall limit, impact or waive the City's right to receive the local share of racing taxes currently collected by the Commonwealth pursuant to M.G.L. c. 58, § 18D, as the same may be amended.

I. Utilities. The Developer recognizes that the Project may require upgrades to certain portions of the City or third party utility companies' infrastructure and, accordingly, the Developer agrees as follows:

1. Electricity. The Developer shall, at no expense to the City, cause to be provided any upgrades or cause to be constructed any new electrical facilities required to provide the necessary electric power service to the Project.

2. Natural Gas. The Developer shall, at no expense to the City, cause to be provided any upgrades or cause to be constructed any new gas transmission facilities required to provide the necessary natural gas service to the Project.

3. Water and Wastewater. The Developer shall pay all customary connection fees, inflow and infiltration charges, monthly service charges, monthly usage fees and permit fees to the Boston Water and Sewer Commission and shall construct, improve or modify, or pay all actual costs incurred by the City and/or the Boston Water and Sewer Commission to construct, improve or modify, water and wastewater infrastructure necessary to service the Project. The Developer shall be responsible for the actual costs to maintain and repair any water or wastewater infrastructure that solely serves the Project. In addition, the Developer shall be required to abide by the terms and conditions of any Approvals from the Boston Water and Sewer Commission or other agreements entered into between the Developer and the Boston Water and Sewer Commission, including the payment of any additional customary fees required under such Approvals or other agreements.

J. Compulsive Gambling Resources. The Developer will implement a responsible gaming plan at the Property to make sure that those people who cannot game responsibly get the help they need and to make sure that people who can game responsibly understand the importance of gaming responsibly. The Developer shall mitigate the potential negative public health consequences associated with the Project and the operation of the Casino.

The Developer will accomplish the responsible gaming goals for the Project by, among other things: (i) complying in every respect with all responsible gaming provisions in the Act and all responsible gaming provisions subsequently adopted by the Commission or adopted by the City or its departments or agencies, including the City's Board of Health, City's Public Health Commission and the Gaming Accountability Office; (ii) ensuring that all patrons in the Gaming Areas are twenty-one (21) years of age or over, as required by Section 25(h) of the Act; (iii) educating its employees through formal training programs about the importance of responsible gaming and underage gambling and the policies and procedures of Developer's responsible gaming programs; (iv) providing information to patrons about the odds of games, signs and symptoms of compulsive gaming and how to make responsible gaming decisions; (v) promoting responsible gaming in daily operations; and (vi) supporting public awareness of responsible gaming, including, at a minimum, working with the National Council on Problem Gambling, Inc., its local councils and other service agencies in and around the City and region on a continuing basis to promote a better understanding of responsible gaming and underage gambling and supporting research on responsible gaming and underage gambling issues through on-going financial contributions.

The Developer shall implement a "self-restriction" program that allows anyone to request not to receive direct marketing by the Developer's owned, managed, or operated properties, as well as to be denied credit and check cashing privileges at the Casino. Forms to request self-restriction or self-exclusion shall be readily available to all customers and individuals who visit the Property.

The Developer will join and actively participate in the Massachusetts Partnership for Responsible Gaming and actively work with the City's Public Health Commission and the City's Board of Health for the express purpose of assisting the City to address issues of treatment for compulsive behavior, especially problem gaming in the City. Developer's obligations under this Section IV.J shall not be inconsistent with any State Direction.

K. Payment of the Development Process Cost Fees and Development Dispute Cost Fees. The Developer shall reimburse the City for all due and unpaid Development Process Cost Fees and Development Dispute Cost Fees upon receipt of an invoice from the City. The invoice for the initial Development Process Cost Fees or Development Dispute Cost Fees shall be issued by the City approximately thirty (30) to sixty (60) days after the Effective Date. For subsequent Development Process Cost Fees and Development Dispute Cost Fees, the City shall invoice the Developer from time to time, but not more frequently than monthly, for such fees incurred since the prior invoice. The Developer shall pay such invoiced fees within thirty (30) days from the date of the invoice in accordance with the instructions provided in the invoice. The invoice provided by the City shall include a summary of the charges and such reasonable detail as the City believes is necessary and as may reasonably be requested by the Developer to inform the Developer of the nature of the costs and expenses, subject to any applicable privilege and confidentiality restrictions. As more particularly set forth in Section XVII.S., the Developer's obligation to pay the Development Process Cost Fees and Development Dispute Cost Fees incurred by the City prior to the termination of this Agreement shall survive termination of the Agreement.

V. OBLIGATIONS OF THE CITY

In consideration of the mitigation measures to be undertaken by or paid for by the Developer for the impacts to the City and, in particular on the East Boston community, and in further recognition of the benefits the Project will bring to East Boston and the City as a whole, the City and the BRA, as applicable, shall do the following:

A. The BRA and/or the Developer will prepare and submit to the City's Zoning Commission changes to the Boston Zoning Code to permit the Developer's proposed Gaming use at the Property.

B. The City and the BRA will accept and process applications for Approvals submitted by the Developer for the Project, including, without limitation, zoning and land use approvals and the 121A Approvals.

C. The City will establish the Community Impact Trust or another appropriate vehicle at its discretion to hold and administer the Upfront Community Impact Fee and a portion of the Annual Host Community Agreement Fee.

D. Upon execution of this Agreement, the City will make the signed Agreement public with a concise summary, approved by the City's Corporation Counsel, in a periodical of general circulation and on the official website of the City not later than seven (7) days after execution until the Election has been certified, all as required by Section 15(13) of the Act.

E. The City will certify the results of the Election as required by Section 15(13) of the Act.

VI. RIGHT OF ACCESS

Subject to any restrictions imposed upon the Developer by State Direction, the Developer hereby grants the City and the City's Authorized Representatives, including, without limitation, the Gaming Accountability Office, the right to enter upon the Property at all reasonable times for the purpose of enforcing the provisions of this Agreement, for inspecting the Project, and for reconstructing, maintaining, repairing, or servicing any facility or element located on the Property which may be owned by the City or its Authorized Representatives. In each instance of entry, the City or its Authorized Representatives shall use diligent efforts to minimize the disruption to the Developer's operations.

VII. TRANSFERS AND ASSIGNMENT

Except with respect to Financings undertaken pursuant to the terms of this Agreement, the Developer hereby covenants and agrees with the City that it will not voluntarily Transfer its Direct or Indirect Interest in the Project without the express consent and approval of the City and the BRA, if the 121A Approvals are granted. However, in no event shall the foregoing covenant and agreement be applicable to Transfers of a Direct or Indirect Interest in the Project to an Affiliate. All Transfers to Affiliates shall be effective upon the filing of written notice of such transfer or assignment with the City (such notice to include a disclosure of those having beneficial interests in the Affiliate). The written consent of the City and the BRA to the extent the 121A Approvals are granted, whenever required by the terms of this Section, shall be granted, withheld or conditioned in the City and the BRA's sole discretion. To assist the City and the BRA in its review of a proposed Transfer that requires the City and the BRA's consent, the Developer shall provide the City and the BRA with written evidence of the proposed transferee or assignee's qualifications to own and/or operate the Project, evidence of the transferee or assignee's financial status, and such other information as may be requested by the City or the BRA. Any transferee, assignee or any Person succeeding to the rights, obligations and interest of the Developer in the Project by operation of law, or insolvency or otherwise shall, at the option of the City, be deemed to have agreed to be bound by the terms, covenants and conditions of this Agreement.

VIII. DEFAULT

A. Events of Default. Subject to the Operational Limitations and all Governmental Requirements, the occurrence of any of the following shall constitute an "Event of Default" under this Agreement:

1. If the Developer fails to make any payments of the Upfront Community Impact Fee or Annual Host Community Agreement Fee required to be made by the Developer hereunder as and when due;

2. If the Developer fails to make any payments other than the Upfront Community Impact Fee or Annual Host Community Agreement Fee required to be made by the Developer hereunder and such failure continues for five (5) business days after the Developer's receipt of a written notice of default with respect thereto from the City;

3. If the Developer shall make a general assignment for the benefit of creditors or shall admit in writing its inability to pay its debts as they become due;

4. If the Developer shall file a voluntary petition under any title of the United States Bankruptcy Code, as amended from time to time, or if such petition is filed against the Developer and an order for relief is entered, or if the Developer shall file any petition or answer seeking, consenting to or acquiescing in any reorganization, arrangement, composition, readjustment, liquidation, dissolution or similar relief under any present or any future federal bankruptcy code or any other present or future applicable federal, state or similar statute or law, or shall seek or consent to or acquiesce to or suffer the appointment of any trustee, receiver, custodian, assignee, liquidator or similar official of the Developer, or of all or any substantial part of its properties or of the Project or any interest therein of the Developer;

5. If within ninety (90) days after the commencement of any proceeding against the Developer seeking any reorganization, arrangement, composition, readjustment, liquidation, dissolution or similar relief under the present or any future federal bankruptcy code or any other present or future applicable federal, state or similar statute or law, such proceeding shall not have been dismissed; or if within ninety (90) days after the appointment, without the consent or acquiescence of the Developer of any trustee, receiver, custodian, assignee, liquidator or other similar official of the Developer or of all or any substantial part of its properties or of the Project or any interest therein of the Developer, such appointment shall have not been vacated or stayed on appeal or otherwise, or if within ninety (90) days after the expiration of any such stay, such appointment shall not have been vacated;

6. If the Developer fails to maintain in full force and effect the Letters of Credit;

7. If the Developer fails to Restore the Property pursuant to the terms of Article XIII;

8. If any representation or warranty made by the Developer hereunder shall prove to have been false or misleading in any material respect as of the time made or furnished; provided, however, that if the condition causing the representation or warranty to be false is susceptible of being cured, the same shall be an Event of Default hereunder only if such condition is not cured within thirty (30) days after written notice to the Developer from the City, and, provided further, that if the condition causing the

representation or warranty to be false is susceptible of cure but cannot reasonably be cured within such thirty (30) day period and the Developer shall have commenced to cure such condition within such thirty (30) day period and thereafter diligently and expeditiously proceeds to cure the same, such thirty (30) day period shall be extended for such time as is reasonably necessary (not to exceed sixty (60) days after the Developer's receipt of the above-described notice from the City) for the Developer in the exercise of due diligence to cure such condition;

9. If the Developer breaches a Covenant set forth in Article X below, and such breach is not cured within thirty (30) days after written notice to the Developer from the City, or, if such breach cannot reasonably be cured within such thirty (30) day period and the Developer shall have commenced to cure such breach within such thirty (30) day period and thereafter diligently and expeditiously proceeds to cure the same, such thirty (30) day period shall be extended for such time as is reasonably necessary (not to exceed sixty (60) days after the Developer's receipt of the above-described notice from the City) for the Developer in the exercise of due diligence to cure such breach;

10. If the Developer transfers or assigns this Agreement, except in accordance with the provisions of Article VII above;

11. If a default shall occur, which has not been cured within any applicable cure period otherwise expressly provided elsewhere in this Agreement;

12. If the Developer fails to maintain in full force and effect policies of insurance meeting the requirements of Article XII below and in such event the Developer fails to remedy such default within five (5) business days after the Developer's receipt of written notice of default with respect thereto from City;

13. If the Developer fails to complete the Early Opening Component and the Early Opening Transportation Improvements by the date that is thirty (30) days after the Early Opening Operations Commencement Date and/or fails to achieve Early Opening Operations Commencement by the date that is thirty (30) days after the Early Opening Operations Commencement Date;

14. If the Developer fails to complete the Full Build-Out Component and the Full Build-Out Transportation Improvements by the date that is thirty (30) days after the Full Build-Out Opening Operations Commencement Date and/or fails to achieve Full Build-Out Operations Commencement by the date that is thirty (30) days after the Full Build-Out Operations Commencement Date;

15. If the Developer fails to complete and operate or have completed or operated on its behalf, a second hotel on the portion of the Property on or before the Second Hotel Operations Commencement Date;

16. If the construction of the Project (inclusive of offsite activities) at any time is discontinued or suspended for a period of thirty (30) consecutive calendar days, subject to Force Majeure, and is not restarted prior to the Developer's receipt of written notice of default hereunder; and

17. If the Developer shall default in the performance of any (a) Governmental Requirement; or (b) commitment, agreement, term or condition of this Agreement, and in such event if the Developer shall fail to remedy any such default within sixty (60) days after receipt of written notice of default with respect thereto; provided, however, that if any such default is reasonably susceptible of being cured within ninety (90) days, but cannot with due diligence be cured by the Developer within thirty (60) days, and if the Developer commences to cure the default within sixty (60) days and diligently prosecutes the cure to completion, then the Developer shall not during such period of diligently curing be in default hereunder as long as such default is completely cured within ninety (90) days of the first notice of such default to the Developer.

B. Remedies. Upon an Event of Default, subject to the limitations if Section VIII.C., the City shall have the right if it so elects (subject to the Dispute resolution provisions in Section XVII.K. hereof, if applicable) to (i) exercise any and all remedies available at law or in equity, provided that any monetary damages resulting therefrom shall solely be the responsibility of Sterling Suffolk and its successors and assigns, (ii) receive liquidated damages as set forth in Section VIII.D. hereof, (iii) draw on the Letters of Credit, and/or (iv) institute and prosecute proceedings to enforce in whole or in part specific performance of this Agreement by the Developer, to enjoin or restrain the Developer from commencing or continuing said breach, and/or to cause by injunction the Developer to correct and cure said breach or threatened breach, provided that any monetary damages resulting therefrom shall solely be the responsibility of Sterling Suffolk and its successors and assigns. None of the remedies enumerated herein are exclusive, except for the City's rights to receive liquidated damages under the provisions of Section VIII.D. hereof which liquidated damages may be satisfied by drawing on the Letters of Credit as set forth in Section VII.D., and except as limited by Section VIII.C., nothing in this Agreement shall be construed as prohibiting the City from pursuing any other remedies at law, in equity or otherwise available to the City.

C. Termination. Except for the provisions that by their terms survive and subject to the provisions of Section XVII.S. of this Agreement, this Agreement shall terminate upon the occurrence of any of the following events and with immediate effect:

1. The Developer in its entirety is found not qualified by the Commission to proceed to the RFA-2 phase of the selection process;

2. The Developer fails to receive the affirmative vote in the Election required under the Act;

3. The Category 1 License for Region A (as such term is defined in the Act) is awarded to a party other than the Developer, and (i) such other party has both paid the Category 1 License fee pursuant to Section 10(d) of the Act and submitted the construction deposit or bond required pursuant to Section 10(a) of the Act, and (ii) such award is not subject to any pending appeal, further review, or revocation proceedings;

4. The Developer's Category 1 License is revoked by a final, non-appealable order of the Commission; or

5. The expiration of the Term of this Agreement or the nonrenewal of the Category 1 License awarded to the Developer.

These termination events are in addition to any other rights of the City or the Developer to terminate this Agreement otherwise available under law.

D. Liquidated Damages. The City and the Developer agree that because of the difficulty and/or impossibility of determining the City's damages upon the occurrence of an Event of Default pursuant to Section VIII.A. above by way of detriment to the public benefit and welfare of the City through lost employment opportunities, lost tourism and loss of revenue, both directly and indirectly, the Developer shall pay the City, during the Damage Period, as hereinafter defined, and the City shall accept as an exclusive remedy, as liquidated damages and as a reasonable forecast of such potential damages, and not as penalties, the following sums:

1. For an Event of Default under Section VIII.A.1 of this Agreement, the amount outstanding plus interest at a rate of eighteen percent (18%) per annum for the first thirty (30) days then the sum of Eighty-Eight Thousand Dollars ($88,000.00) per calendar day for each day in the Damage Period after the thirtieth (30^{th}) day.

2. For an Event of Default under Section VIII.A.13, Section VIII.A.14 or Section VIII.A.15 of this Agreement; the sum of Fifty-Five Thousand Dollars ($55,000.00) per calendar day.

3. For all other Events of Default set forth in Section VIII.A. of this Agreement, the sum of up to Twenty-Five Thousand Dollars ($25,000.00) per calendar day, such amount to be set at the City's sole discretion.

The Developer agrees to waive any and all affirmative defenses that the amount of liquidated damages provided herein constitutes a penalty. For purposes of this Section, the "Damage Period" shall commence on the date the City delivers written notice to the Developer of its election to receive liquidated damages pursuant to this Section and shall continue until the date the Event of Default is cured. No liquidated damages under this Section shall be payable following the expiration of the Developer's Category 1 License at the end of the original fifteen (15) year term. To the extent the Developer fails to pay the liquidated damages due under this Section within five (5) days after a request by the City, notwithstanding anything to the contrary in this Agreement, the City shall be permitted to draw down on the applicable Letters of Credit to satisfy this payment obligation.

IX. LETTERS OF CREDIT

Pursuant to Section 10(a) of the Act and 205 CMR 122.05, if the Developer is issued a Category 1 License by the Commission, the Developer is required to either deposit ten percent (10%) of the Developer's proposed capital investment in the Project in an interest-bearing escrow account or, at the Commission's discretion, obtain a deposit bond insuring ten percent (10%) of the proposed capital investment. In the event the Developer is unable to complete the gaming establishment, the deposit or deposit bond would be forfeited to the Commonwealth in accordance with the Act.

In addition, to secure the Developer's obligations under this Agreement during the construction phase of the Project, including, without limitation, all payments to the City due before the Full Build-Out Operations Commencement Date and all liquidated damages that may be due hereunder, within thirty (30) days after the issuance of the Category 1 License to the Developer, the Developer shall deliver to the City an original irrevocable standby letter of credit issued by a major money center bank located within the United States reasonably acceptable to the City in the initial sum of Twenty Million Dollars ($20,000,000.00)(the "Construction Letter of Credit"). The Construction Letter of Credit shall be issued in accordance with, and subject to, the International Standby Practices (ISP98) International Chamber of Commerce Publication No. 590 and the rules of the Uniform Customs and Practice for Documentary Credits (1993 Revision), International Chamber of Commerce Publication No. 500, as most recently published and/or updated by the International Chamber of Commerce, or any successor code of standby letter of credit practices generally adopted by the issuing bank as may be in effect at the time of issuance (the "Letter of Credit Standards").

In addition, to secure the Developer's obligations under this Agreement, including, without limitation, payments of the Annual Host Community Agreement Fee, any liquidated damages due hereunder, and to pay for any losses incurred by the City as a result of an Event of Default by the Developer, prior to the issuance of and as a condition to the issuance of the final Certificate of Occupancy by the City's Inspectional Services Department for the Full Build-Out Component of the Project, (i) the Developer shall deliver to the City an original irrevocable standby letter of credit issued by a major money center bank located within the United States reasonably acceptable to the City in the initial sum of Twenty Million Dollars ($20,000,000.00) (the "Host Community Agreement Letter of Credit," and together with the Construction Letter of Credit, the "Letters of Credit"), and (ii) the Construction Letter of Credit shall promptly be returned by the City to the Developer or the Authorized Lender. For the purpose of clarity, the City shall not be permitted to draw on the Construction Letter of Credit once the City has received the Host Community Agreement Letter of Credit from the Developer. The Host Community Agreement Letter of Credit shall be issued in accordance with the Letter of Credit Standards.

The Letters of Credit shall be in form and substance acceptable to the City in accordance with the Letter of Credit Standards set forth above. The Letters of Credit shall automatically renew. The Developer shall be obligated to maintain the Host Community Agreement Letter of Credit for the Term of the Agreement.

During the Term, the Letters of Credit shall be renewed or replaced prior to expiry with either a renewal of the then current Letter(s) of Credit or with a replacement Letter(s) of Credit satisfying the other requirements of this Section, in either case extending the expiry Letter(s) of Credit for at least twelve (12) months. At least forty-five (45) days prior to the expiration of the then-current Letter(s) of Credit, the Developer shall notify the City in writing of its intention to deliver original renewal or replacement Letters of Credit. The Developer shall deliver original renewal or replacement Letter(s) of Credit to the City at least thirty (30) days prior to expiration of the then current Letter(s) of Credit. If a satisfactory renewal or replacement Letter(s) of Credit has not been delivered to the City at least thirty (30) days prior to the expiration of the then current Letter(s) of Credit, the City shall be entitled to draw on the then existing Letter(s) of Credit and shall hold the funds in escrow until such time as a replacement Letter(s) of Credit has

been provided to the City. The provisions of this Section shall survive the termination or expiration of this Agreement.

X. COVENANTS OF THE DEVELOPER

A. Affirmative Covenants of the Developer. The Developer covenants that throughout the Term, the Developer shall:

1. Do or cause to be done all things necessary to preserve, renew and keep in full force and effect its legal existence.

2. Do or cause to be done all things necessary to preserve, renew and keep in full force and effect the Approvals and the Category 1 License, and comply with all Governmental Requirements applicable to the operation of its business and other activities, in all material respects, whether now in effect or hereafter enacted.

3. Furnish to the City:

a) Within one hundred five (105) days after the end of each Casino Year of the Developer commencing with the Casino Year in which the Early Opening Operations Commencement Date occurs, annual financial statements, balance sheets and statements of operations, owners' equity and cash flows of the Developer and the Project showing the financial condition and operation of the Developer and the Project as of the close of such year and the results of operations during such year, all of the consolidated financial statements to be audited by a firm of independent certified public accountants of recognized national standing acceptable to the City and accompanied by an opinion of such accountants without material exceptions or qualifications.

b) Within forty-five (45) days after the end of each fiscal quarter of the Developer commencing with the fiscal quarter in which the Early Opening Operations Commencement Date occurs, financial statements (including balance sheets and statements of cash flow and operations) showing the financial condition and results of operations of the Developer and the Project as of the end of each such fiscal quarter and for the then elapsed portion of the current fiscal year, accompanied by a certificate of an officer of the Developer that such financial statements have been prepared in accordance with GAAP, consistently applied, to the extent applicable.

c) Promptly upon the receipt thereof, copies of all reports, if any, submitted to the Developer by independent certified public accountants in connection with each annual, interim or special audit or review of the financial statements of the Developer and the Project made by such accountants, including any comment letter submitted by such accountants to management in connection with such review.

d) Simultaneous with its submission to the Commission, accurate, complete and certified copies of reports submitted pursuant to Sections 21(a)(10), 21(a)(12), 21(a)(15), 21(a)(23), 21(a)(24), 23(a) and 28(b) of the Act.

e) Simultaneous with its submission, full and complete copies of any and all applications by the Developer for LEED certifications, as more particularly described in Exhibit H of this Agreement.

f) Simultaneous with its submission or receipt, full and complete copies of all applications, permits, approvals, licenses and correspondence regarding the sale or consumption of alcohol at the Project.

g) Within one hundred five (105) days of the end of each Casino Year, a statement as to whether the Developer is aware of any noncompliance with the radius restriction set forth in Section III.U.

h) Beginning at the Full Build-Out Operations Commencement Date and every two (2) years thereafter, the Developer shall deliver a report to the City and the Gaming Accountability Office that (i) evaluates the effectiveness of mitigation measures implemented by the Developer in any Approvals including, without limitation, a comparison of actual vehicle trips to and from the Project compared to projected vehicle trips and the effectiveness of the transportation improvements listed in Exhibit E, (ii) provides information regarding and evaluates the effectiveness of environmental and sustainability measures and commitments made in this Agreement, including, without limitation, greenhouse gas emissions, energy use of the Project broken down by source, on-site energy generation, use of alternative transportation by employees, visitors and customers broken down by type of transportation used, water use and stormwater compliance initiatives, waste and recycling initiatives, local food provisions and all other provisions in Exhibit H, (iii) provides an assessment of the impacts of the Project on housing and school population, and (iv) details the Developer's compliance with all of its other obligations under this Agreement, including, without limitation, the required square footage of Gaming Areas set forth in Section III.A., the First Class Project Standards in Section III.B., the operations requirements in Section III.E., the minimum number of permanent and construction jobs and the average annual salary of employees identified in Section III.M. as well as the plans and commitments in Exhibit I-1, Exhibit I-2 and Exhibit I-3, the local business, purchasing and economic development requirements in Section III.N., the slot machine purchasing obligations in Section III.R., the smoke-free provisions in Section III.V. and the construction management plan in Section III.W.

i) From time to time, such other information regarding the compliance by the Developer with the terms of this Agreement or the affairs, operations or condition (financial or otherwise) of the Developer and the Project or as the City may reasonably request.

j) Prompt written notice of the following (but in no event later than five (5) business days following the actual knowledge thereof by the Developer):

(1) The issuance by any Governmental Authority of any injunction, order, decision, notice of violation or deficiency, asserting a violation of Governmental Requirements applicable to the Developer or the Project, together with copies of all relevant documentation;

(2) The issuance by any Mortgagee or other Person providing Financing to the Developer of a letter, notice or other document alleging a default, event of default or failure to comply with the terms of a Financing, together with copies of all relevant documentation;

(3) The notice, filing or commencement of or any threatened notice, filing or commencement of, any action, suit or proceeding by or against the Developer whether at law or in equity or by or before any court or any Governmental Authority that pertains in any way to the Project;

(4) Any default or Event of Default by the Developer under this Agreement, specifying the nature and extent of the default or Event of Default and the action (if any) that is proposed to be taken by the Developer;

(5) Any Transfer or proposed Transfer under Article VII; and

(6) Any development in the business or affairs of the Developer that could reasonably be expected to have a Material Adverse Effect.

4. Maintain financial records in accordance with GAAP, or the equivalent thereof, and permit an authorized representative designated by the City during normal business hours to visit, inspect and audit the properties and financial records and to make extracts from such financial records, all at the Developer's reasonable expense, and permit any authorized representative designated by the City to discuss the affairs, finances and conditions of the Developer with any executive officer or other manager or officer of the Developer or the Casino and the Developer's independent public accountants, all as such representative of the City shall reasonably deem appropriate.

5. Make or cause to be made, annual capital expenditures to the Project consistent with Section 21(a)(4) of the Act.

B. RFA-2 Response. The Developer shall:

1. Promptly, completely and accurately submit to the Commission its completed response to the Commission's RFA-2 (the "RFA-2 Response"), all other information as the Commission may from time to time require from the Developer in connection with its application for a Category 1 License, make all payments required under the Act to be made by an applicant for a Category 1 License and use its best efforts to satisfy all criteria necessary to be issued a Category 1 License by the Commission;

2. Furnish to the City a copy of the RFA-2 Response simultaneous with or immediately following its submission to the Commission and reasonably consult with the City in advance of such submission, as to its content;

3. Consult with the City prior to making any formal presentation to the Commission concerning its RFA-2 Response; and

4. Prior to the Commission issuing a Category 1 License to the Developer, keep the City informed as to all material contacts and communications between the Commission and its staff and the Developer so as to enable the City to evaluate the likelihood and timing of the Commission issuing a Category 1 License to the Developer.

C. Negative Covenant of the Developer. The Developer covenants that throughout the Term, the Developer shall not declare or pay and dividends, payments or distributions to any members or shareholders of the Developer upon the occurrence of an Event of Default under Sections VIII.A.1 through Section VIII.A.7, Section VIII.A.10, Section VIII.A.12 or Sections VIII.A.13 through Section VIII.A.16 until such Event of Default is cured.

D. Confidentiality of Deliveries. To the extent that the Act, other laws of the Commonwealth or any other Governmental Requirements, in the reasonable opinion of the City's Corporation Counsel, allow confidential treatment of items Developer is obligated to furnish to the City under Sections X.A.3(a), (b), (c), (d), (j)(1), (j)(2), (j)(3), (j)(5) and (j)(6) and Section X.B.2., the City agrees to keep such items confidential (for so long as they are entitled to confidential treatment) and shall not disclose them except (i) to such City officials and consultants on a need-to-know basis; and/or (ii) pursuant to a court order. Further, to the extent that the Developer requests confidential treatment of any documentation or information required to be provided to the City under this Agreement, and such documentation and information may be protected from disclosure by the City under applicable law, the City shall maintain such documentation and information confidential to the extent permitted by applicable law. The City may agree to undertake an in person review and inspection of any such confidential information as a means of reviewing the information provided by Developer in accordance with its obligations under this Article X.

XI. REPRESENTATIONS AND WARRANTIES

A. Representations and Warranties of the Developer. The Developer represents and warrants that:

1. The Developer is a duly formed limited liability company organized under the laws of the Commonwealth of Massachusetts and is in good standing and qualified to do business under the laws of the Commonwealth of Massachusetts;

2. The Developer has taken all actions required by law to approve the execution of this Agreement;

3. The Developer's entry into this Agreement and/or the performance of the Developer's obligations under this Agreement do not violate any contract, agreement or other legal obligation of the Developer;

4. The Developer's entry into this Agreement and/or the performance of the Developer's obligations under this Agreement do not constitute a violation of any state or federal statute or judicial decision to which the Developer is subject;

5. There are no pending lawsuits or other actions or proceedings which would prevent or impair the timely performance of the Developer's obligations under this Agreement;

6. The Developer has the legal right, power, and authority to enter into this Agreement and to consummate the obligations contemplated hereby, and the execution, delivery and performance of this Agreement have been duly authorized and no other action by the Developer is requisite to the valid and binding execution, delivery, and performance of this Agreement, except as otherwise expressly set forth herein, and this Agreement is enforceable against the Developer;

7. The individual executing this Agreement on behalf of the Developer is authorized to execute this Agreement on behalf of the Developer; and

8. This Agreement is binding on the Developer and is enforceable against the Developer in accordance with its terms, subject to applicable principles of contract, equity and insolvency laws.

B. Representations and Warranties of the City. The City represents and warrants that:

1. The City is a validly existing municipal corporation and has all requisite power and authority to enter into and perform its obligations under this Agreement, and all other agreements and undertakings to be entered into by the City in connection herewith;

2. This Agreement is binding on the City and is enforceable against the City in accordance with its terms, subject to applicable principles of equity and insolvency laws;

3. The City's entry into this Agreement and/or the performance of the City's obligations under this Agreement do not violate any contract, agreement or other legal obligation of the City;

4. The City's entry into this Agreement and/or the performance of the City's obligations under this Agreement do not constitute a violation of any state or federal statute or judicial decision to which the City is subject;

5. There are no pending lawsuits or other actions or proceedings which would prevent or impair the timely performance of the City's obligations under this Agreement; and

6. The individual executing this Agreement on behalf of the City is authorized to execute this Agreement on behalf of the City.

XII. INSURANCE AND INDEMNITIES

A. Insurance.

1. The Developer shall maintain in full force and effect the types and amounts of insurance as set forth below, and to the extent permissible under Governmental Requirements, the City shall be named as an additional insured under each policy. The Developer shall be responsible for all deductibles related to such insurance. In addition, the City may require commercially reasonable increases in all insurance coverage amounts from time to time as may be appropriate for projects of similar size and complexity.

Type of Coverage	**Requirements**
Commercial General Liability (occurrence form)	Coverage shall include products liability, completed operations, liquor liability, garagekeepers legal liability, damage to rented premises, personal and advertising injury and blanket contractual injury. The policy shall have limits of at least $1,000,000 per occurrence and $2,000,000 per location aggregate for property damage and bodily injury.
Automobile Liability Insurance	$1,000,000 combined single limit coverage each accident. This policy shall include coverage for loss due to bodily injury or death of any person, or property damage arising out of the ownership, maintenance, operation or use of any motor vehicle whether owned, non-owned, hired or leased.

Workers' Compensation Insurance	Limits as required by statue in the Commonwealth covering all of the Developer's personnel performing work or services in connection with the Project.
Employers' Liability Insurance	$1,000,000 each accident and each employee for disease.
Umbrella and/or Excess Liability Insurance	$300,000,000 each occurrence/aggregate.
Pollution Legal Liability Insurance	$5,000,000 each occurrence/aggregate. This policy shall provide coverage for third-party bodily injury, property damage, cleanup costs and defense costs that arise in connection with the Project.

2. Prior to undertaking any activities on the Property, the Developer and any of its Authorized Representatives shall first provide the City certificates of insurance evidencing all insurance policies that the Developer and its Authorized Representatives (including, without limitation, any architects, engineers, general contractors, subcontractors, and consultants) are required to carry hereunder. All such certificates of insurance shall confirm the specific coverage requirements stated above and shall unequivocally state that should any of the above-described policies lapse, be materially changed, or by cancelled before the expiration date thereof, the issuing insurer shall provide thirty (30) days written notice to the City.

3. All policies of insurance referred to herein shall be written in a form that is reasonably acceptable to the City (acting through the Mayor) and by companies that are authorized to do business in the Commonwealth and having a financial strength rating by A.M. Best Company, Inc. of not less than "A-" or its equivalent from another recognized rating agency. The City (acting through the Mayor), in its sole discretion, may waive or modify one or more of the foregoing insurance requirements if the same are not available on commercially reasonably terms. All policies of insurance shall provide that any act or negligence of the Developer shall not prejudice the rights of the City as a party insured under said policies. If requested by the City in writing, the Developer shall furnish the City with certified copies of the insurance policies required hereunder.

B. Policies Non-Cancelable. The Developer agrees that all policies of insurance referred to herein shall not be canceled or allowed to lapse nor shall any material change be made in any such policy which changes, restricts or reduces the insurance provided, nor shall there be a change in the name of the insured, without first giving thirty (30) days notice in writing to the City.

C. Keep in Good Standing. The Developer shall observe and comply with the requirements of all policies of public liability, fire and other policies of insurance at any time in force with respect to the Project and the Developer shall so perform and satisfy the requirements of the companies writing such policies.

D. Waiver of Subrogation. The Developer hereby waives all rights of recovery against the City and its Authorized Representatives on account of loss or damage to the Property, and to the extent that the Developer obtains an insurance policy for such loss or damage, the Developer shall cause such policy to be endorsed to waive the insurer's rights of subrogation against the City and its Authorized Representatives.

E. Indemnity. The Developer, at its sole cost and expense, shall defend and shall indemnify and hold harmless the City and its Authorized Representatives from and against all loss, cost, damage, and expense, including claims for bodily injury and property damage, which are incurred or suffered by any one or more of them (a) based upon or arising out of the gross negligence or willful misconduct of the Developer, or any of the Developer's Authorized Representatives in the performance of any activity, undertaking or obligation arising out of this Agreement, or (b) based upon or arising out of any breach of or default under this Agreement by the Developer; provided, however, that the Developer shall not be liable for any losses to the extent caused by the gross negligence or willful misconduct of any one or more of the City or its Authorized Representatives. The foregoing express obligation of indemnification shall not be construed to negate or abridge any other obligation of indemnification running to the City which would exist at common law or under other provisions of this Agreement, and the extent of the obligation of indemnification shall not be limited by any provision of insurance undertaken in accordance with this Agreement. This indemnification shall survive the termination of this Agreement.

XIII. DAMAGE OR DESTRUCTION; CONDEMNATION

A. Damage or Destruction. In the event of damage to or destruction of improvements at the Project or any part thereof by fire, casualty or otherwise, the Developer, at its sole expense and whether or not the insurance proceeds, if any, shall be sufficient therefor, shall promptly repair, restore, replace and rebuild (collectively, "Restore") the improvements, as nearly as possible to the same condition that existed prior to such damage or destruction using materials of an equal or superior quality to those existing in the improvements prior to such casualty. All work required to be performed in connection with such restoration and repair is hereinafter called the "Restoration." The Developer shall obtain a permanent certificate of occupancy as soon as practicable after the completion of such Restoration. If neither the Developer nor any Mortgagee shall commence the Restoration of the improvements or the portion thereof damaged or destroyed promptly following such damage or destruction and adjustment of its insurance proceeds, or, having so commenced such Restoration, shall fail to proceed to complete the same with reasonable diligence in accordance with the terms of this Agreement, the City may, but shall have no obligation to, complete such Restoration at the Developer's expense. Upon the City's election to so complete the Restoration, the Developer immediately shall permit the City to utilize all insurance proceeds which shall have been received by the Developer, minus those amounts, if any, which the Developer shall have applied to the Restoration, and if such sums are insufficient to complete the Restoration, the Developer,

on demand, shall pay the deficiency to the City. Each Restoration shall be done subject to the provisions of this Agreement.

B. Use of Insurance Proceeds.

1. Subject to the conditions set forth below, all proceeds of casualty insurance on the improvements shall be made available to pay for the cost of Restoration if any part of the improvements are damaged or destroyed in whole or in part by fire or other casualty.

2. Promptly following any damage or destruction to the improvements by fire, casualty or otherwise, the Developer shall:

a) give written notice of such damage or destruction to the City and each Mortgagee; and

b) deliver a written notice of the Developer's intent to complete the Restoration in a reasonable amount of time plus periods of time as performance by the Developer is prevented by Force Majeure events (other than financial inability) after occurrence of the fire or casualty.

3. The Developer agrees to provide monthly written updates to the City summarizing the progress of any Restoration, including but not limited, anticipated dates for the opening of the damaged areas to the public, to the extent applicable.

4. The Developer shall have no notification requirements to the City for any Restoration having a value less than Fifty Million Dollars ($50,000,000) in the aggregate.

C. No Termination. Except as expressly provided herein, no destruction of or damage to the Project, or any portion thereof or property therein by fire, flood or other casualty, whether such damage or destruction be partial or total, shall permit the Developer to terminate this Agreement or relieve the Developer from its obligations hereunder.

D. Condemnation. If a Major Condemnation occurs, this Agreement shall terminate, and no Party shall have any claims, rights, obligations, or liabilities towards any other Party arising after termination, other than as provided for herein. If a Minor Condemnation occurs or the use or occupancy of the Project or any part thereof is temporarily requisitioned by a civil or military governmental authority, then (a) this Agreement shall continue in full force and effect, and (b) the Developer shall promptly perform all Restoration required in order to repair any physical damage to the Project caused by the Condemnation, and to restore the Project, to the extent reasonably practicable, to its condition immediately before the Condemnation.

E. Subject to Financing. In connection with a Financing, the Parties agree that the terms and conditions of this Section XIII shall be complied with in accordance with the terms and conditions set forth in Exhibit Q.

XIV. ESTOPPELS

The City (acting through the Mayor) shall, with reasonable promptness, but in no event later than thirty (30) days after receipt of a written request therefor by the Developer, any mortgagee, lessee or purchaser of all or a portion of the Project, which request has been made in connection with the closing, sale, lease or financing of the Project or any portion thereof, provide a certificate in writing in the form attached hereto as Exhibit L stating that, to the City's actual knowledge, this Agreement is in full force and effect and unmodified, or stating in what respects the Agreement is no longer in force and effect or has been modified, and whether or not the City has actual knowledge of any default under this Agreement by the Developer and, if so, in what respects.

XV. FORCE MAJEURE

A. Definition of Force Majeure. An event of "Force Majeure" shall mean the following events or circumstances, to the extent they result in a delay beyond the reasonable control of the Developer or its Authorized Representatives or otherwise result in a Material Adverse Effect on the Developer's ability to satisfy its duties and obligations under this Agreement:

1. Strikes, lockouts, boycotts, labor disputes, inability to procure labor, equipment, facilities, materials, services or supplies attributable to market-wide shortages, failure or delay of utilities or utility providers, or explosions;

2. Acts of God, tornadoes, hurricanes, floods, sinkholes, fires and other casualties, landslides, earthquakes, epidemics, quarantine and/or pestilence;

3. Acts of a public enemy, acts of war, terrorism, effects of nuclear radiation, blockades, insurrections, public disturbances, riots, civil disturbances, or local, national or international calamities;

4. Any law, act or order of a Governmental Authority, including, without limitation, any stay, temporary restraining order, preliminary injunction or permanent injunction, or mandamus or similar order, and any litigation or administrative delay, in each case which impedes the ability of the Developer to complete the Project in accordance with this Agreement, unless based materially in whole or in part on the actions or failure to act of the Developer; and

5. The failure by, or unreasonable delay of, the City or Commonwealth or other Governmental Authority to issue any permits or Approvals necessary for Developer to develop, construct, open or operate the Project by the Early Opening Operations Commencement Date or Full Build-Out Operations Commencement Date unless such failure or delay is based materially in whole or in part on the actions or failure to act of Developer, its Affiliates or its Authorized Representatives.

The Developer's lack of funds shall not be considered an event of Force Majeure.

B. Notice. The Developer shall promptly notify the City in writing of the occurrence of an event of Force Majeure, of which it has knowledge, describe in reasonable detail the nature of the event and provide a good faith estimate of the duration of any delay expected in the Developer's performance obligations.

C. Excuse of Performance. Notwithstanding any other provision of this Agreement to the contrary, the Developer shall be entitled to an adjustment in the time for or excuse of the performance of any duty or obligation of the Developer under this Agreement for Force Majeure events, but only for the number of days due to and/or resulting as a consequence of such causes and only to the extent that such occurrences actually prevent or delay the performance of such duty or obligation or cause such performance to be commercially unreasonable.

XVI. REOPENERS

The Parties acknowledge and agree that in addition to the "triggering events" for reopening an agreement set forth in 205 CMR 127.02, the Parties have voluntarily agreed to reopen and negotiate an amendment to this Agreement, as permitted under 205 CMR 127.06, for the following reasons:

A. Class A Reopener: To effectuate any Material Project Changes or any changes to this Agreement that would reduce the amount of the Upfront Community Impact Fee or Annual Host Community Agreement Fee.

B. Class B Reopener: To effectuate any Material Project Changes or any changes to this Agreement, which, in the opinion of the City in consultation with the BRA, are not or have not been effectively mitigated by the Developer.

C. Class C Reopener: To effectuate any Material Project Changes or any changes to this Agreement, which, in the opinion of the City in consultation with the BRA and following a public process, are or have been effectively mitigated by the Developer; provided, however, that in no event is such change classified as a Class A Reopener.

D. Class D Reopener: To effectuate any Material Project Changes or any changes to this Agreement to reflect changes in law, regulations or interpretations by Governmental Authorities that are or have been effectively mitigated by the Developer; provided, however, that in no event is such change classified as a Class A Reopener.

E. Class E Reopener: To incorporate changes necessitated by the terms and conditions of Approvals, including, without limitation, BRA Approvals under Article 80B and Article 53 of the Boston Zoning Code that are or have been effectively mitigated by the Developer; provided, however, that in no event is such change classified as a Class A Reopener.

F. Class F Reopener: To correct non-material terms or typographical errors; provided, however, that in no event is such change classified as a Class A Reopener or Class B Reopener.

Notwithstanding the foregoing, in order to effectuate an amendment to this Agreement that includes either a Class A Reopener or Class B Reopener (i) the Parties and any parties who must execute limited joinders shall mutually negotiate an amendment to this Agreement, (ii) the amendment shall be executed by the Parties and all other parties who must execute limited joinders, (iii) the governing body of the City shall schedule a date certain to hold an election, all in the same manner as is required by Section 15(13) of the Act, (iv) the City will make the signed agreement public with a concise summary, approved by the City's Corporation Counsel, in a periodical of general circulation and on the official website of the City not later than seven (7) days after execution until the results of the election on the amendment have been certified, all in the same manner as is required by Section 15(13) of the Act, and (v) such amendment containing a Class A Reopener or Class B Reopener shall receive a certified and binding vote in favor of the amendment on a ballot question at the election.

Notwithstanding the foregoing, in order to effectuate an amendment to this Agreement that includes only a Class C Reopener, Class D Reopener, Class E Reopener or Class F Reopener, (i) the Parties and any parties who must execute limited joinders shall mutually negotiate an amendment to this Agreement and (ii) the amendment shall be executed by the Parties and all other parties who must execute limited joinders.

No proposed changes to the Project or the Agreement shall be effective unless and until the Parties have complied with the provisions of this Article XVI. The Parties shall continue to adhere to the terms and conditions of this Agreement pending the mutual execution and delivery of any amendment to this Agreement.

XVII. MISCELLANEOUS

A. Notices. Any notice hereunder shall be in writing and shall be deemed duly given if mailed by certified or registered mail, postage and registration charges prepaid, by overnight delivery service with receipt, or by hand delivery during normal business hours, to the Parties at the addresses set forth below (or such other addresses as a party may hereafter designate for itself by notice to the other party as required hereby):

If to the City:
Mayor
City of Boston
1 City Hall Square, Suite 500
Boston, MA 02201-2013

With copies to:
City of Boston
Office of Gaming Accountability
1 City Hall Square
Boston, MA 02201-2013

If to the Developer:
Sterling Suffolk Racecourse, LLC
525 William F. McClellan Highway
East Boston, MA 02128
Attention: Chair of the Board and COO

with copies to: DLA Piper LLP
33 Arch Street, 26th Floor
Boston, MA 02110-1447
Attention: Charles A. Baker III, Esq.

Any such notice shall be effective three (3) days after mailing if sent by certified or registered mail, one (1) day after mailing if sent by overnight delivery service, or on the day of delivery if sent by hand delivery or by email.

B. Conflict of Interests; Representatives and Agents Not Individually Liable. No member, official, employee, agent, or other authorized representative of the City shall have any personal interest, direct or indirect, in this Agreement, nor shall any such member, official, employee, agent, or representative participate in any decision relating to this Agreement which affects his or her personal interests or the interests of any corporation, partnership, or association in which he or she is, directly or indirectly, interested. No member, official, employee, agent, or other authorized representative of the City shall be personally liable to the Developer, or any successor in interest, in the event of any default or breach by the City or for any amount which may become due to the Developer or its successor or on any obligations under the terms of this Agreement. No stockholder, member, indirect or direct owner, director, manager, officer, employee, agent, or other authorized representative of the Developer shall be personally liable to the City, or any successor in interest, in the event of any default or breach by the Developer or for any amount which may become due to the City or its successor or on any obligations under the terms of this Agreement.

C. No Liability for Approvals and Inspections. No approval to be made by the City under this Agreement or any inspection of the Work by the City shall render the City liable for failure to discover any defects or non-conformance with this Agreement, or a violation of or noncompliance with any federal, Commonwealth or local statute, regulation, ordinance or code.

D. Time of the Essence. All times, wherever specified herein for the performance by the Developer of its obligations hereunder, are of the essence of this Agreement.

E. Cost of Investigation. If as a result of this Agreement, the City or any of its directors or officers, the Mayor, or any City Council members, or any employee, agent, or representative of the City is required to be licensed or approved by the Commission, the reasonable, actual costs of such licensing, approval or investigation shall be paid by the Developer within thirty (30) days following receipt of a written request by the City. Any such costs shall be considered Development Process Cost Fees.

F. Disclosure and Revenue Enforcement Statements. In compliance with the provisions of M.G.L. c. 7C, § 38 relative to the filing of disclosure statements, signed under the pains and penalties of perjury, by persons who have or will have a Direct or Indirect Interest in the Property, the Developer shall furnish to the City, prior to the City or the BRA taking any action with respect to any Approvals, evidence of the filing of a signed statement in the form attached hereto as Exhibit M with the Commissioner of the Commonwealth of Massachusetts Division of Capital Asset Management and Maintenance, and shall update the same annually on January 1 of each year and promptly following any permitted Transfer as provided in Article VII

hereof. Pursuant to M.G.L. c. 62C, § 49A, the Developer shall furnish to the City, simultaneously with the execution and delivery of this Agreement, a signed statement in the form attached hereto as Exhibit N as required by applicable law and shall update the same annually on January 1 of each year and promptly following any permitted Transfers as provided in Article VII hereof. In addition, the Developer shall file with the City copies of all disclosures required to be made under Approvals granted by the BRA, including Approvals under Article 80B of the Boston Zoning Code.

G. Actions by the Parties; Good Faith Cooperation. When the approval of either party is required to be obtained pursuant to this Agreement, such party shall be obligated to act reasonably and in good faith, and any such approval may not be unreasonably withheld, conditioned or delayed, except as specifically provided otherwise in this Agreement. In this Agreement, when City review and/or approval is required, it will be deemed to mean the applicable City department as directed by the Mayor, unless otherwise specifically set forth herein.

H. No Partnership. No relationship between the City and the Developer of partnership or joint venture is intended to be created hereby, and any such relationship is hereby disclaimed.

I. Applicable Law. This Agreement shall be governed by and construed in accordance with the laws of the Commonwealth of Massachusetts.

J. Jurisdiction; Venue.

1. For purposes of any suit, action or proceeding involving a dispute arising under or related to this Agreement, the Parties hereby expressly submit to the jurisdiction of the United States District Court for the District of Massachusetts or the Superior Court Department of Suffolk County and the Parties agree that such courts shall have exclusive jurisdiction over any suit, action or proceeding commenced by either or both of said Parties. In furtherance of such agreement, the Parties agree upon the request of the other to discontinue (or agree to the discontinuance of) any suit, action or proceeding pending in any other jurisdiction.

2. Each party hereby irrevocably waives any objection that it may now or hereafter have to the laying of venue of any suit, action or proceeding involving a dispute arising out of or relating to this Agreement brought in any federal or state court sitting in Suffolk County in the Commonwealth of Massachusetts and hereby further irrevocably waives any claim that any such suit, action or proceeding brought in any such court has been brought in an inconvenient forum.

K. Arbitration; Dispute Resolution.

1. Alternative Process. While the Commission's regulations at 205 CMR provide for arbitration in certain circumstances, pursuant to the terms of 205 CMR 127.02, the Parties hereby acknowledge and agree that all Disputes under this Agreement, including a

Dispute regarding the reopening of this Agreement, whether specified in 205 CMR 127.02 or voluntarily agreed to in this Agreement as provided for in 205 CMR 127.06, shall be settled as set forth herein and shall not be settled expressly as set forth in 205 CMR 127.00.

2. Dispute Resolution. With respect to any Dispute, the following procedures will be implemented before any Party pursues other available remedies, except that any Party may seek injunctive relief, from a court identified in Section XVII.J. hereof, where appropriate, in order to maintain the status quo while this procedure is being followed:

a) Negotiation Amongst Representatives. The Parties will hold a meeting promptly, attended by the Developer's Authorized Representative, the City Representative and such other Persons with decision making authority regarding the Dispute, to attempt in good faith to negotiate a resolution of the Dispute; provided, however, that no such meeting will be deemed to vitiate or reduce the obligations and liabilities of the Parties or be deemed a waiver by a Party of any remedies to which such Party would otherwise be entitled hereunder. Any such meeting will be held at the principal offices of the City unless otherwise agreed to by the Parties.

b) Litigation. If, within twenty-one (21) days after such meeting (or such later date mutually acceptable to the Parties), the Parties have not succeeded in negotiating a resolution of the Dispute, then such Dispute shall be settled by a suit or proceeding in federal or state court pursuant to the provisions of this Agreement, unless the Parties mutually agree in writing to arbitration consistent with the procedures set forth in 205 CMR 127.05.

L. Severability. If any term or provision of this Agreement, or the application thereof to any person or circumstance shall, to any extent, be invalid, inoperative, or unenforceable, the remainder of this Agreement, or the application of such term or provision to persons or circumstances other than those as to which it is held invalid, inoperative or unenforceable, shall not be affected thereby; it shall not be deemed that any such invalid, inoperative or unenforceable provision affects the consideration for this Agreement; and each term and provision of this Agreement shall be valid and enforceable to the fullest extent permitted by law.

M. Entire Agreement. This Agreement integrates all of the terms and conditions mentioned herein or incidental hereto, and supersedes all negotiations or previous agreements between the Parties with respect to all or any part of the subject matter hereof. All waivers of the provisions of this Agreement must be in writing and signed by the Mayor and the Developer.

N. Exhibits; Counting of Days; Rules of Construction. The obligations of the Parties as set forth in this Agreement are subject to compliance with the terms and conditions of the Exhibits attached hereto which are incorporated herein and shall be considered a part of this Agreement. The titles or headings to the various sections of this Agreement are for convenience

of reference only, do not define or limit the contents thereof, and should be ignored in any construction thereof. When used herein, the words "he" or "she" shall have the same meaning. Unless specifically noted to the contrary, the term "day" as used in this Agreement shall mean calendar day.

Each party has cooperated in the drafting and preparation of this Agreement. Accordingly, in any action to construe this Agreement, a party's participation in such drafting shall not cause any language to be construed against it.

O. Counterparts. This Agreement may be executed in multiple counterpart originals, each of which shall constitute one and the same instrument.

P. Successors and Assigns. The provisions of this Agreement shall be binding upon, and shall inure to the benefit of, the successors and assigns of the Developer and the public body or bodies succeeding to the interests of the City, and to any subsequent grantees of any portion of the Property.

Q. Non-Discrimination. The Developer shall comply with all federal, state and municipal laws, rules, regulations and policies promoting fair employment practices or prohibiting employment discrimination and unfair labor practices and shall not discriminate in the hiring of any applicant for employment nor shall any qualified employee be demoted, discharged or otherwise subject to discrimination in the tenure, position, promotional opportunities, wages, benefits or terms and conditions of their employment because of race, color, national origin, ancestry, age, sex, religion, disability, handicap, sexual orientation or for exercising any rights afforded by law.

R. Recording. The Parties shall cooperate in recording and filing a copy of a Notice of Agreement with the Suffolk County Registry of Deeds and Suffolk County Registry District of the Land Court in the form attached hereto as Exhibit O. Upon the termination of this Agreement pursuant to Section VIII.C., the Parties shall cooperate in recording and filing a customary form of a Notice of Termination Notice of Agreement with the Suffolk County Registry of Deeds and Suffolk County Registry District of the Land Court. The costs of recording the Notice of Agreement and Notice of Termination of Notice of Agreement shall be paid by the Developer.

S. Non-Survival Upon Termination Under Certain Provisions. If this Agreement is terminated pursuant to Section VIII.C.1, Section VIII.C.2 or Section VIII.C.3 of this Agreement, then both Parties are relieved from all obligations under this Agreement, excepting the Developer's obligations regarding payment of Development Process Cost Fees and Development Dispute Cost Fees set forth in Section IV.K. of this Agreement. This provision of this Section supersedes any other provisions of this Agreement contrary thereto.

T. Mortgagee Subordination. Sterling Suffolk agrees to obtain and record with the Suffolk County Registry of Deeds and file with the Suffolk County Registry District of the Land Court a subordination agreement from all Mortgagee(s) similar in form and substance to the form attached hereto as Exhibit P. The subordination shall be recorded and filed by Sterling Suffolk immediately following the recording and filing of the Notice of Agreement set forth in Section

XVII.R but in any event within thirty-five (35) days after the issuance of a Category 1 License to the Developer by the Commission, for any existing Mortgagee as of the date of the recording of the Notice of Agreement and for all subsequent Financings.

EXHIBIT D

Description of Early Opening Component

Caesars Resort at Suffolk Downs is a redevelopment proposed on approximately 161 acres of land in East Boston and Revere with all major proposed construction occurring in Boston. The main access points to the site are from Route 1A to the west and Tomasello Drive as well as from Winthrop Avenue at the north end of the property. Two mass transit stops on the MBTA Blue Line (Suffolk Downs and Beachmont stations) currently serve the Project site. The property is currently home to Suffolk Downs, which opened in 1935 and remains New England's only operating thoroughbred racetrack.

Caesars Resort at Suffolk Downs provides a unique opportunity to create a world class entertainment complex located minutes from the heart of downtown Boston and Logan International Airport. The Project will be constructed in one continuous phase, although certain portions of the Resort—described as Early Opening below—will open to the public before the Full Build is complete. As described below, the Project program includes two distinct casino gaming areas (referred to herein as Casino Area I and Casino Area II), two hotels, multi-purpose meeting/entertainment space, dedicated structured parking as well as surface parking, fine dining, retail space, and bars.

Early Opening Project Narrative

The Early Opening portion of the project, consisting of Casino Area I, will be housed on the first floor of the existing, re-purposed grandstand, link, and clubhouse buildings on the Project site. In its current design, the first floor will be a gaming floor (i.e., slot machines and table games) that will include a restaurant, sports bar, and dedicated poker room.

The second floor of the grandstand building will be re-purposed to house a Streets of Boston restaurant pavilion and back-of-house support spaces with connections to the grandstand area for racing patrons. The second floor of the adjacent link building will be re-purposed to house gaming offices and additional back-of-house support spaces. A double-bay loading dock and employee service entrance will be located on the north side of the building. Just to the north, a central utility plant will provide utility services for the entire Resort.

The existing clubhouse, attached to the grandstand building via the link building, will undergo renovations and will continue to house the horse racing program on the second and third levels. Gaming and racing components will be operated jointly and will be fully accessible to patrons.

The Early Opening Component shall include, without limitation all of the following items:

The Early Opening Component shall include, without limitation, all of the following items as shown on the Site Plan attached hereto at Exhibit A:

1. Reconstruction of the existing grandstands and clubhouse at the Property into a Gaming Area between 75,000 and 125,000 square feet with between 2,500 and 3,500 gaming positions (consisting of an evolving combination of slot machines and table games including a World Series of Poker room.

2. Between 4,000 and 6,000 square feet of meeting and entertainment space;

3. Thoroughbred racing track and simulcast betting area;

4. Between 2,000 and 2,250 parking spaces for patrons;

5. Food and beverage outlets with between 700 and 1,200 seats, including at least 6 restaurants;

6. A central utility plant; and

7. Construction of a security gate along the MBTA trolley turn around at Waldemar Avenue as well security cameras and surveillance along the Waldemar Avenue boundary of the Property and the boundaries of the Property near the Suffolk Downs MBTA station, all with a connection feed to the City. The security gate cannot be a chainlink fence and must be capable of being electronically opened by the City and its emergency personnel.

EXHIBIT E

Transportation Improvements

I. General Provisions

Terms used in this Exhibit E and not otherwise defined shall have the meaning ascribed to them in the main body of this Agreement. For purposes of this Exhibit E, "Post Opening" shall mean a date that is not later than one (1) year from the Full Build-Out Operations Commencement Date and the "Revere HCA" shall mean the Host Community Agreement entered into between Revere and the Developer.

The improvements itemized in this Exhibit E are proposed to address specific issues that have been raised by the community, the City and Revere, or by the Developer as either responding to current needs in the community or mitigating particular impacts expected on account of the Project. At this preliminary stage in the development of the Project, they are conceptual and remain subject to review by the various Governmental Authorities with jurisdiction over the improvement. Notwithstanding the preliminary nature of these improvements, the Parties have used their best judgment in articulating the specific improvements that are proposed at each location. The City and the Developer acknowledge that changes to the concepts are inevitable as design advances into the construction phase. However, the City shall approve design changes only if the modified design, in the sole discretion of the City, addresses the concern relating to the underlying community need or the Project mitigation objective.

II. Off-Site Transportation Improvements

As set forth in Section III.L of the Agreement, Developer shall spend a minimum of Forty Five Million Dollars ($45,000,000) on transportation improvements related to the Project, exclusive of land acquisition or right of way costs, including, without limitation, the following improvements. In no event shall less than Nine Million Three Hundred Twenty Thousand Dollars ($9,320,000.00) be allocated and expended in connection with transportation improvements within the City owned and maintained street and sidewalks. To the extent that the total cost of the construction and implementation of Items 3, 4, 5, 6, 7, and 8 as described below is less than said $9,320,000.00, the remaining funds shall be dedicated and expended on other transportation improvements within the City as the City, in its sole discretion, determines appropriate.

Item	Location or Type	Action(s)[1]	Completion Date	Cost
TRAFFIC CONGESTION AND SAFETY-BOSTON				
1	Route 1A Boardman to Jughandle	Construct flyover; add lanes and signals	Full Build-Out Transportation Improvement	$25,000,000
3	Bennington Street/Saratoga Street	Modify channelization, phasing and timing	Early Opening Transportation Improvement	$500,000

[1] As necessary, these actions are more fully described in the narrative that follows this chart.

4	Boardman Street/Saratoga Street	Reconfigure roundabout approaches	Early Opening Transportation Improvement	$500,000
5	Neptune Rd/Chelsea St to NB Ramp	Signal coordination, turn restrictions, islands	Early Opening Transportation Improvement	$2,500,000
6	Curtis Avenue/Route 1A	Channelization, signage	Early Opening Transportation Improvement	$1,100,000
7	Boardman Street/Ashley Street	Reconstruction of intersection	Early Opening Transportation Improvement	$720,000
8	Contingency Fund	Create Contingency Fund	Early Opening Transportation Improvement	See narrative below
TRAFFIC CONGESTION AND SAFETY-REVERE*				
9	Route 1/Route 16	Ramp connection improvements	As per Revere HCA	$2,100,000
10	Route 1/Route 16	Develop long-range plan for intersection improvements (feasibility study)	As per Revere HCA	$400,000
11	Route 16/Route 145/Harris Street	Add turn lanes, pedestrian accommodations, islands	As per Revere HCA	$1,600,000
12	Donnelly Square	Channelization, pedestrian access., timing	As per Revere HCA	$860,000
13	North Shore Rd/RBP/Tomasello Drive	Island, pedestrian accommodations, timing	As per Revere HCA	$1,000,000
14	Mahoney (Bell) Circle	Fund channelization, pedestrian access., timing, signs	As per Revere HCA	$400,000
15	Brown Circle	Fund signs, markings and channelization	As per Revere HCA	$200,000
16	Route 60/Revere Street	Fund detection, curbing and pedestrian accommodations	As per Revere HCA	$680,000
17	Copeland Circle/Route 1	Coordination w/MassDOT re: long-range plans	Post Opening	
ALTERNATIVE MODES				

23	Blue Line Access	Provide walkway to SD Station	Early Opening Transportation Improvement	$430,000 for Items 23 and 27]
24	Blue Line Access	Upgrade sidewalks to Beachmont along Winthrop Street	Early Opening Transportation Improvement	
25	Blue Line Access	Construct Suffolk Downs station upgrades	Full Build-Out Transportation Improvement	$3,000,000
27	Bus Access	Provide bus stops and shelters on site	Early Opening Transportation Improvement	See Item 23 above.
29	Bicycle Access	Provide bike lanes on Bennington Street	Early Opening Transportation Improvement	$140,000
31	Bicycle Access	Provide bike share parking	Early Opening Transportation Improvement	$114,000

* To the extent that items 9 through 16 above are not completed prior to the Full Build-Out Operations Commencement Date, the Developer will work with the City to design and implement interim solutions to mitigate the adverse traffic impacts in the City between the Full Build-Out Operations Commencement Date and the date of completion of such improvements per the Revere HCA.

Narrative Description of Off-Site Transportation Improvements

Item 1 - Route 1A/Boardman to Jughandle

Four intersections are treated as one in the proposed Resort construction program. The proposed improvements include construction of a northbound Route 1A overpass bridging the Boardman Street intersection, meeting grade to the south of Waldemar Avenue. At Waldemar Avenue, a traffic signal would be installed allowing controlled movement between the Route 1A northbound through movement from the overpass and vehicles on an adjacent northbound frontage road serving vehicles proceeding northbound from the Boardman Street corridor. The Route 1A corridor width approaching this traffic signal would be five lanes, one of which would be set for movement to Waldemar Avenue. Continuing northbound, the intersection of Tomasello Drive (a private way) and Route 1A would be signalized with four northbound lanes provided, one of which will be for right turns into Tomasello Drive. The three remaining lanes will continue northerly several hundred feet through an upgraded traffic signal referred to as the "Jughandle" (at or near the Boston/Revere City Line) where the existing traffic signal would be upgraded and then the third lane would be dropped, tapering the existing two northbound lanes north of the Jughandle in Revere. Southbound, two through lanes would be maintained approaching the Jughandle, and extend through the Tomasello Drive intersection. Two additional left turn only lanes would be added approaching Tomasello Drive for access to the

Resort at Suffolk Downs. The Route 1A SB corridor would then be widened to three through lanes from Tomasello Drive southerly to and through the Boardman Street intersection, extending for a distance several hundred feet beyond the Boardman Street intersection and then taper to two lanes. A fourth lane will be provided approaching Boardman Street for left turns under the flyover to access Orient Heights and U-turns on the southbound approach to the new northbound frontage road.

All of the associated widening required for this work will be completed on the easterly side of the Route 1A corridor. Boardman Street westbound will be widened to allow for three lanes to approach Route 1A, consistent with the proposal advanced as part of the proposed hotel development at the intersection of Route 1A and Boardman Street. Waldemar Avenue will be maintained as one lane in each direction. Tomasello Drive will be widened to provide two lanes departing from Route 1A (entering the Resort), and four lanes approaching Route 1A (exiting the Resort - three for left turns and one for right turns). This plan is subject to the approval of MassDOT, City of Boston Transportation Department (BTD) and the City of Boston Public Improvement Commission (PIC).

Item 3 - Bennington Street/Saratoga Street

The base design used for improvements at this location is to improve pedestrian conditions and to upgrade signal operations. At the intersection, the installation of a traffic island in the southwest quadrant and redirection of crosswalks for both the Bennington and Saratoga crossings is proposed, providing a compliant curb ramp for the Bennington Street cross in the southeast quadrant, lane use changes on the northbound Bennington Street approach (one right only and one through left), and median removal and median removal/relocation on the northerly leg of Bennington Street to allow a three lane SB approach (two through and one left), with one through lane NB. Signal phasing modifications are also proposed with minor support relocations. As part of this intersection work, improvements will be made to the Saratoga Street pedestrian crossing in the Barnes Avenue/Bayswater Street triangle area to provide a pedestrian warning beacon system and compliant crossing ramps. The base design concept assumes the City of Boston has all of the right of way necessary to make these improvements. This work is subject to the approval of BTD and PIC.

Item 4 - Boardman Street/Saratoga Street

The basic concept of a traffic circle has been maintained within this intersection with the 11 year old geometry upgraded to a more standard roundabout design. The circle diameter would be increased and splitter islands added where roadway widths permit. The curb line along the easterly side of Saratoga Street would be modified to significantly reduce the pavement area and the reclaimed roadway would be used for parking adjacent to the Saratoga Street residences. Pedestrian crossings would be relocated and generally pass through the splitter islands where available. The base design cost assumes that the City of Boston has all of the right of way necessary to make these improvements. This work is subject to the approval of BTD and PIC.

Item 5 - Neptune Rd/Chelsea St to NB Route 1A Ramp off-ramp

This corridor has been split in two areas for the proposed improvement plan. The westerly section extends from Chelsea Street to Bremen Street, and the easterly section extends from Bremen Street to Frankfort Street.

Within the westerly section, the plan creates a one-way couplet with Saratoga Street providing a one-way SB corridor from Bremen Street to Neptune Road and Bremen Street one way NB from Neptune Road to Saratoga Street. The curb line on the southeast corner of Chelsea Street and Saratoga Street would be modified (pavement area reduced) and a median would be added on Neptune Road from Chelsea Street to Bremen Street where two lanes would be provided – one left turn and one lane continuing to Bennington Street. Based on traffic count evaluation, provide stop control on Neptune Road only or multi-way stop control on all approaches. Given geometric concerns and heavy truck activity, traffic signal control is not a viable option. The base design concept assumes that the City of Boston has all of the right of way necessary to make these improvements. Approvals are required from BTD and PIC. A neighborhood review process is also anticipated.

Within the easterly section the plan developed looks to increase capacity at the intersection by splitting the function of the overall intersection with the elimination of the westbound Neptune movement between the Route 1A NB ramps and Bennington Street. All traffic from the ramp (except the U-turn to Route 1A SB) and from Frankfort Street would be directed to Vienna Road and then allowed to access Bennington Street northbound and southbound via a new traffic signal and median break. Removal of the westbound movement from the Bennington Street intersection will allow increased time for the Bennington Street southbound phase, accommodating both the existing demand and the redirected movement from the closed link. The base design concept assumes that the City of Boston has all of the right of way necessary to make these improvements. Approvals are required from BTD, PIC, MassDOT and MassPort. A neighborhood review process is also anticipated.

Item 6 - Route 1A SB at Curtis Street

A proposal to realign Route 1A SB has been developed in response to the request for improvements to this intersection. The realignment is intended to create an "exit" from Route 1A SB to the Curtis Street area rather than the wide pavement area that currently exists. The relocation would be into a grass and tree area within the Route 1A median and provide for two continuous lanes for the southbound through movement. An island would be created within the current paved area of the exiting movement and through movement. Movement from the newly created ramp would intersect with the Curtis Street movement under single or multi-way stop control (to be evaluated) and the movement from the Curtis Street corridor onto Route 1A southbound would be in a free-flow condition to the third lane available south of the interchange area. The base design concept assumes that all work will be completed within the State Highway layout and that no right of way acquisition is necessary to make these improvements. This work is subject to the approval of MassDOT, BTD and PIC.

Item 7 - Improvements at Boardman Street and Ashley Street

The objective of this intersection improvement is to improve safety for pedestrian travel along the north side of Boardman Street. Ashley Street presently meets Boardman Street from the north at a very flat angle such that the Ashley Street opening is approximately 250 feet wide.

"Squaring up" of the intersection is proposed to significantly narrow the width of this opening. The conceptual plan would realign the northern curb line along Ashley Street to meet Boardman Street at a 90-degree angle closing the Ashley Street opening and shortening the pedestrian crossing to approximately 30 feet. To the west of the new intersection location the curb line would be moved to the south to parallel the Boardman Street travelway. Existing driveways on this segment would be extended to meet Boardman Street. Drainage systems would be redesigned to be compatible with the new street layout and new landscaping would be added. The design concept assumes the City of Boston has all of the right of way necessary to make these improvements. The design will be developed with community input and final design is subject to the approval of the City of Boston.

Item 8 – Contingency Fund

The Developer shall post a bond payable to the City of Boston in the amount of Four Million Five Hundred Thousand Dollars ($4,500,000.00) which is equal to ten percent (10%) of the costs for all transportation improvements listed in Section II of this Exhibit E, which the City may use to address unforeseen roadway capacity and safety issues. The funds could be used to modify to the above roadway improvements and/or address new locations to the extent that the issues identified may be attributable all or in part to the casino resort project. Funds that have not been expended within six (6) years of the Full Build-Out Operations Commencement Date will be returned to the applicant.

Item 9 - Route 1/Route 16:

The Developer represents and warrants that the Revere HCA provides that the Developer will fund and cause the permitting, design and construction of, in coordination with state and municipal agencies, and in consultation with the City of Revere, intermediate geometric improvements and new signalizations at this interchange.

The improvements are intended to provide missing movements to an important regional highway access point. Under existing conditions, access from Route 1 SB to Route 16 EB and from Route 16 WB to Route 1 NB are not provided, and there is redundant ramp access from Route 16 WB to Route 1 SB provided less than 1,500 feet from the existing interchange, or approximately 600 feet west of Webster Avenue. The proposed build condition would include closure of the Route 16 WB access to Route 1 SB within the existing interchange and a diversion of that movement farther to the west beyond Webster Avenue. The current on/off ramp configuration to and from Route 1 SB would become a four lane off ramp to Route 16 East and west with a median break on Route 16 and installation of a traffic signal. This ramp will provide the opportunity to significantly reduce left lane and left/U-turn congestion at the Route 16/Webster Street intersection. The on-ramp to Route 1 NB from Route 16 WB would be developed with a second Route 16 median break on the easterly side of Route 1 together with construction of a left turn lane, The left turn movement to Route 1 NB would be signal controlled and would tie into the existing EB to NB loop ramp through an open in-field area. Both signals would operate in two phases (Route 16 east and west and the Route 1 SB off at the off-ramp location and the eastbound through and westbound left to Route 1 NB at the second site). Note that there would be no stopping of the westbound through movement at the proposed signal to the northbound on-ramp movement. The interchange work would also include an update the Route 16, Webster Avenue, Garfield Avenue intersection, and pavement area reduction where

acceleration lanes are no longer required. The improvements are subject to the approval of DCR, MassDOT, and cities of Revere and Chelsea.

Item 10 – Route 1/Route 16 Feasibility Study

The Developer represents and warrants that the Revere HCA requires that the Developer will fund a study of Route 1/Route 16 interchange. The study will be in the nature of a long-range plan for the interchange based on a conceptual plan consistent with long range plans for interchange developed in the North Shore Transportation Study by CTPS. The plan is limited to a study of the merits of the design and does not include a full review of the environmental planning process nor final design plans.

Item 11 - Route 16/Revere Beach Parkway/Harris Street Intersection

The Developer represents and warrants that the Revere HCA requires the following work to be completed at this intersection, as follows:

The design and implementation of an optimal traffic signal timing and phasing plan, including split phasing;
Construction of two exclusive right turn lanes eastbound onto Revere Beach Parkway;
Construction of pedestrian safety improvements to allow for safe pedestrian routes from Winthrop Avenue to Revere Beach Parkway in both eastbound and westbound directions, including associated sidewalk reconstruction, curb ramps, crosswalks and median improvements; and
Installation of an emergency vehicle preemption system.

A series of improvement alternatives have been developed for this location. The common elements of each are the control of the right turn movement from Route 16 East to Winthrop Avenue (Route 145), a widening of this right turn movement from one lane to two lanes, and an associated widening of Route 16 EB to maintain the two-lane through movement toward Mahoney (Bell) Circle. Pedestrian connections will be provided in the intersection area and the traffic signal installation will be upgraded. The alternatives include maintaining Harris Street as a two-way corridor, changing to a one-way away from Winthrop Avenue, one-way to Winthrop Avenue and full closure of Winthrop Avenue at the intersection coupled with construction of a left turn lane on the Mahoney Circle to Route 16 Connector south-westbound. The improvements require City of Revere, DCR and, potentially MassDOT, approval.

Item 12 - Donnelly Square

The Developer represents and warrants that the Revere HCA requires the following work to be completed at this location, as follows:

Design and implementation of an optimal traffic signal timing and phasing plan, including split phasing, for the weekday morning, weekday evening and Saturday midday peak periods;
Redesign of the intersection to channelize traffic flow on the intersection approaches;

Construction of permanent pedestrian crosswalks with new ADA accessible ramps at all crosswalks within the Donnelly Square area;
Widening of Winthrop Avenue west of Washburn Avenue to provide for the relocation of the MBTA bus stops in the eastbound and westbound lanes, to accommodate bus turn-in lanes and to provide for two lanes on Winthrop Avenue eastbound;
Construction of aesthetic improvements within the Donnelly Square area, including new pavement markings;
Construction of landscaping improvements within the Donnelly Square area and along Winthrop Avenue leading to the Project entrance at Revere Beach Parkway and Tomasello Drive; and
Installation of an emergency vehicle preemption system.

This signal controlled intersection is adjacent to the MBTA Beachmont Station. The base improvement assumed for this site includes a signal upgrade using concurrent pedestrian crossings, extension of the Bennington Street median to the south to better control the prohibited left turn movement to a retail parking lot, and realignment of the Crescent Street approach to better manage the Bennington Street approach to Winthrop Avenue. City of Revere and MassDOT approval of the intersection work will be required. Approval of the MBTA may also be required.

Item 13 - North Shore Road/Revere Beach Parkway/Tomasello Drive Intersection

The Developer represents and warrants that the Revere HCA requires the following work to be completed at this location, as follows:

Design and implementation of an optimal traffic signal timing and phasing plan at the intersection of North Shore Road and Revere Beach Parkway, including split phasing, to accommodate increased traffic movements associated with the Project;
A study of alternatives for the provision of an exclusive right hand turning lane into the Tomasello Drive entrance to the Project;
Construction of pedestrian safety improvements at the intersection and along Revere Beach Parkway, including traffic median improvements and potential realignment; and
Installation of an emergency vehicle preemption system.

This intersection will be the secondary access to the Resort. The intersection improvement is limited by a series of environmental concerns west of the intersection and constrained geometry to the north. Improvements under consideration include updating signal operation including concurrent pedestrian crossings, turn lane extensions, minor realignments within the right-of-way, and construction of an island in the southwest quadrant allowing for pedestrian protection. The improvements will require the approval of DCR, MassDOT and the City of Revere.

Item 14 – Mahoney (Bell) Circle

The Developer represents and warrants that the Revere HCA requires the Developer to pay the City of Revere to make improvements to this location as a part of a $1,270,000 payment (including items 14, 15, and 16). Basic improvements are proposed to address as series of pedestrian crossing issues including the upgrade of ramps and walkways, the addition of pedestrian crossing on the American Legion Highway (Route 60) side of the circle, and upgrades to signing and markings. These improvements are subject to approval of MassDOT and the City of Revere.

Item 15 – Brown Circle

The Developer represents and warrants that the Revere HCA requires the Developer to pay the City of Revere to make improvements to this location as a part of a $1,270,000 payment (including items 14, 15, and 16). Improvements at the intersection of Routes 60 and 107 include signing and stripping, addition of a splitter island on the Broadway side of the traffic circle, and upgrades to sidewalk ramps and pedestrian crossings. These improvements are subject to approval of MassDOT and the City of Revere.

Item 16 – Route 16/Revere Street

The Developer represents and warrants that the Revere HCA requires the Developer to pay the City of Revere to make improvements to this location as a part of a $1,270,000 payment (including items 14, 15, and 16). General intersection improvements are proposed for this location, including an upgraded vehicle detection system, improved sidewalk ramps and crossings, curbing, median and sidewalk repair, resurfacing and signal upgrades. These improvements are subject to approval of MassDOT and the City of Revere.

Item 17 – Copeland Circle/Route 1

This feasibility study is proposed to be completed in conjunction with item 10 – the long range plan. The study will be in the nature of a long range plan for this segment of roadway based on conceptual plan consistent with long range plans for segment developed in the North Shore Transportation Study by CTPS. The plan is limited to a study of the merits of the design and does not include a full review of the environmental planning process nor final design plans.

Item 23 – Blue Line Access/walkway to Suffolk Downs Station

See Item 30 for additional detail.

Item 24 – Blue Line Access/upgrade sidewalks to Beachmont Station along Winthrop Avenue (Revere)

The Developer represents and warrants that the Revere HCA requires the Developer to upgrade the sidewalks along Winthrop Avenue in Revere. The improvements are subject to the approval of the City of Revere.

Item 25 – Blue Line Access /construct Suffolk Downs Station upgrades

Discussions with the MBTA regarding the specific improvements to be made to Suffolk Downs Station remain preliminary and subject to change. At this point in the negotiation, the proposed improvements consist of the following concepts:

> Maintenance Improvements: The proposed improvements include concrete restoration and repair of the existing structure, ramps, stairs, overpass and platform. The existing structure will also be repainted;
> Elevators: The proposed improvements include installation of 2 new ADA compliant elevators, together with the associated foundations, structure and improvements;
> Turnstiles: The proposed improvements include installation of 3 new turnstiles at the station;
> Site Improvements: The proposed improvements include installation of new sidewalks, ramps, railings, lighting, way finding ($50,000 allowance) and landscaping from the station to the entrance to the Resort. A pedestrian shelter will be provided at the entrance to the Resort.

The Developer shall ensure that should work continue at this MBTA station after the Early Opening Operations Commencement Date, the Developer shall ensure full functionality and a clean and safe environmental for patrons with adequate wayfinding signage.

These improvements are subject to the MBTA's approval.

Item 27 – Bus Access – Provide bus stops and shelters on site

The Developer shall provide a bus stop and bus shelter along Tomasello Drive in proximity to the entrance to the Project if and when MBTA bus service is extended to Tomasello Drive. The bus stop and shelter location shall be designated on the final site plan.

Item 29 – Bicycle Access – Provide bike lanes on Bennington Street

These improvements call for a "Constitution Beach to Revere Beach" bicycle connection. Bicycle lanes will be marked along the Bennington Street corridor from Saratoga Street in East Boston to Winthrop Parkway in Revere. The bicycle route will start at the northerly end of Constitution Beach Park, proceed northerly along Barnes Avenue (shared lanes) to Saratoga Street, and follow Saratoga Street easterly to Bennington Street also as a shared lane given width limitations on Saratoga Street over the MBTA Blue Line. From Saratoga, to the Boston/Revere City Line, a five foot minimum bicycle lane will be provided with one lane established for through movement northbound. Parking will generally be permitted along the curb line, except approaching the Bennington Street, Leyden Street Walley Street extended intersection area where two travel lanes will be designated, one for left turns and one for through movement. Within an area from 250 feet south of Leyden Street through Palermo Street, parking will be restricted. Parking restrictions, and/or painted median area or two-way left turn lane (TWLT lane) will be considered from Leverett Avenue to the Boston/Revere City Line. Southbound from the Revere/Boston City Line to the Suffolk Downs T Station parking will be restricted (matching northbound). Southerly from the T Station, one travel lane will be maintained with on

street parking and the bicycle lane to an area between Ashley and Antrim Streets, where lane sharing will be provided to Saratoga Street. Initial plans in Revere would provide for a three lane corridor (one through/right lane in each direction with a two-way center left turn lane) with parking both sides at the curb and five foot minimum turn lanes from the City Line to Crescent Street. From Crescent Street to Winthrop Avenue, lanes would be shared in both directions. From Winthrop Avenue to Winthrop Parkway, one travel lane would be removed, maintaining one travel lane, parking and the bicycle lane. Approvals will be required from the Cities of Boston and Revere, as well as MassDOT and DCR.

Item 31 – Bicycle Parking – provide on-site bike parking

The Developer shall fund and install two Hubway bike-share stations if and when the City extends the Hubway system to East Boston. One Hubway station shall be installed near the entrance to the resort and the second shall be installed near the Suffolk Downs MBTA station. Final locations and designs are subject to review by the City.

III. Additional Off-Site Transportation Improvements, On-Site Transportation Improvements and Transportation Demand Management Measures.

In addition to the aforementioned Forty Five Million Dollars ($45,000,000) of transportation improvements, the Developer shall also construct the following transportation improvements:

Item	Location or Type	Action(s)[2]	Completion Date	Cost
TRAFFIC CONGESTION AND SAFETY-BOSTON				
2	Route 1A Boardman to Jughandle	Perform feasibility study, donate ROW owned by the Developer	Early Opening Transportation Improvement	
PARKING				
18	Daily Parking	Construct on-site structured parking garage	Full Build-Out Transportation Improvement	
19	Special Event Parking	Secure off-site parking or accommodate parking on-site	Early Opening Transportation Improvement	
20	Neighborhood Parking	New and additional signage in East Boston during full terms of construction	Early Opening Transportation Improvement	Estimated at $15,000
21	Reserve Parking	Identify reserve parking area	Early Opening Transportation Improvement	

[2] As necessary, these actions are more fully described in the narrative that follows this chart.

22	Bus Parking	Designate bus staging area	Early Opening Transportation Improvement	
ALTERNATIVE MODES				
26	Bus Access	Provide sidewalks along Tomasello	Early Opening Transportation Improvement	
28	Bicycle Access	Provide bike lanes on Tomasello Drive	Early Opening Transportation Improvement	
30	Bicycle Access	Provide connection to site from Bennington Street	Early Opening Transportation Improvement	
32	Water Access	Subsidize water transport	Early Opening Transportation Improvement	
33	Water Access	Operate shuttle bus (provided water shuttle at Maverick is operational)	Early Opening Transportation Improvement	
34	Neighborhood Access	Provide walkway, Waldemar to Target	Early Opening Transportation Improvement	
TRANSPORTATION DEMAND MANAGEMENT				
35	Employee Oriented Strategies	Provide accommodations and incentives	Early Opening Operations Transportation Improvement	
36	Guest Oriented Strategies	Provide accommodations and incentives	Early Opening Operations Transportation Improvement	
37	Scheduling Strategies	Coordinate with City re: Special Events	Early Opening Operations Transportation Improvement	

Narrative Description of Additional Off-Site Transportation Improvements, On-Site Transportation Improvements and Transportation Demand Management Measures.

Item 2 – Route 1A Boardman to Jughandle – planning

The Developer will study in the Draft Environment Impact Report and Expanded Public Notification Form to be filed for the Project the segment of Route 1A to the Jughandle. The study will be in the nature of a long-range plan for this highway segment based on current needs and following on the long range plans for this area developed in the North Shore Transportation

Study by the Central Transportation Planning Staff. The plan is limited to a study of the merits of the design and does not include a full review of the environmental planning process nor final design plans.

Item 18 – Daily Parking – Details to be specified in more detail in the Transportation Access Plan Agreement.

Item 19 – Special Event Parking – Details to be specified in more detail in the Transportation Access Plan Agreement.

Item 20 – Neighborhood Parking – Details to be specified in more detail in the Transportation Access Plan Agreement.

Item 21 – Reserve Parking – Details to be specified in more detail in the Transportation Access Plan Agreement.

Item 22 – Daily Parking – Details to be specified in more detail in the Transportation Access Plan Agreement.

Item 26 – Bus Access – Provide sidewalks along Tomasello

As part of the site development, the Developer shall fund and construct a sidewalk along the entire length of Tomasello Drive to afford pedestrians access to the resort from MBTA bus stops along Route 1A and Winthrop Avenue.

Item 28 – Bicycle Access – Provide bike lanes on Tomasello – see item 30

Item 30 - Bicycle Access – Provide connection to site from Bennington Street

The proposed improvements include construction of a combined 14 foot wide pedestrian/bikeway (approximately 1,300 LF) from the Suffolk Downs Station to the south plaza at the casino entrance (4 foot green strip, 8 foot pedestrian, 2 foot green strip, 6 foot bike path), a 14 foot bikeway (approximately 5,800 LF) from the Resort entrance extending eastward along Tomasello Road to Winthrop Street, and a 14 foot wide bikeway extending from Tomasello Road to the Employee entrance. With respect to a connection to Route 1A, a bikeway can be accommodated in the future if allowed. At the employee entrance, secure, covered storage will be provided for 60 bicycles. At the Resort entrance valet service will be available and a bicycle rack will be provided for patrons.

Item 32 – Water Access – subsidize water transport

The Developer supports the Mayor's vision to enhance water transportation options to East Boston by instituting regular water shuttle service between the South Boston and East Boston waterfronts, and agrees that funding to assist the City in establishing this service will be made out of the Community Impact Trust.

Item 33 – Water Access – operate shuttle bus

As a part its multiple occupancy vehicle strategy, the Developer will expand its current ground shuttle operation to run between the Resort and the several East Boston business districts, area hotels, local cultural and tourist destinations, and regional hubs such as principal MBTA stops on lines that do not easily connect to the Blue Line. It will operate as a connector with the planned water shuttle to the Maverick Square area once that service is running. The shuttle service will also be used to bring employees to and from the Resort. It will also be used in conjunction with Suffolk Downs' proposed guaranteed ride home program, and will operate at all times the resort is open.

Item 34 – Neighborhood Access – Provide walkway, Waldemar to Target

On site improvements at the Resort will include a safe walkway connecting the Waldemar Avenue area with the nearby shopping center that presently hosts a Target retail store. The location of this walkway during construction shall be set forth in more detail in the Construction Management Plan.

Item 35 – Employee Oriented Strategies

In addition to physical roadway, traffic and safety improvements, the Developer is committed to implementing a robust Transportation Demand Management (TDM) program to reduce single-occupancy vehicle (SOV) travel, thereby reducing Project parking demand, traffic congestion, and associated environmental impacts. Equally important, the TDM plan also enhances mobility by alternative modes of transportation by promoting walking, bicycling, ridesharing and transit use. The TDM plan will address the different needs of patrons and employees, and will overlap with other key plan elements including parking demand management and on- and off-site infrastructure improvements and will be subject to BTD approval. Details of the TDM program will be set forth in the Transportation Access Plan Agreement to be executed between the Developer and the Boston Transportation Department.

Item 36 – Guest Oriented Strategies

In addition to its ground shuttle program that will have regular connections with nearby hotels, businesses, cultural attractions and tourist locations, the Developer will have an on-site transportation coordinator at all times to work with patrons on transportation options. In addition, several of its TDM strategies will also be targeted at assisting patrons in arriving and departing from the resort. Further details of this program will be set forth in the Transportation Access Plan Agreement to be executed between the Developer and the Boston Transportation Department.

Item 37 – Scheduling Strategies

The Developer shall work with the City of Boston to coordinate special events to avoid traffic congestion to the maximum extent possible. Further details of this program will be set forth in the Transportation Access Plan Agreement to be executed between the Developer and the Boston Transportation Department.

Notwithstanding anything to the contrary in this Agreement, to the extent that any of the Early Opening Transportation Improvements set forth in this Exhibit E are not completed by the Early Opening Operations Commencement Date due to events beyond the Developer's control, such as delays in permitting, the Developer may commence Gaming operations at the Project provided that the Developer: (i) continues to undertake best efforts to diligently complete any such Early Opening Transportation Improvements; (ii) has agreed to such interim measures as the City determines are required in order to mitigate any adverse traffic and transportation impacts resulting from such delay; and (iii) provides the City escrowed funds in the amount of 110% of the estimated cost of the City to complete such Early Opening Transportation Improvements, which funds the City may elect to use to complete such Early Opening Transportation Improvements if the Developer fails to satisfy its obligations hereunder to do so.

EXHIBIT F

Description of the Full Build-Out Component

Caesars Resort at Suffolk Downs is a redevelopment proposed on approximately 161 acres of land in East Boston and Revere with all major proposed construction occurring in Boston. The main access points to the site are from Route 1A to the west and Tomasello Drive as well as from Winthrop Avenue at the north end of the property. Two mass transit stops on the MBTA Blue Line (Suffolk Downs and Beachmont stations) currently serve the Project site. The property is currently home to Suffolk Downs, which opened in 1935 and remains New England's only operating thoroughbred racetrack.

Caesars Resort at Suffolk Downs provides a unique opportunity to create a world class entertainment complex located minutes from the heart of downtown Boston and Logan International Airport. The Project will be constructed in one continuous phase, although certain portions of the Resort—described as Early Opening below—will open to the public before the Full Build is complete. As described below, the Project program includes two distinct casino gaming areas (referred to herein as Casino Area I and Casino Area II), two hotels, multi-purpose meeting/entertainment space, dedicated structured parking as well as surface parking, fine dining, retail space, and bars.

Full Build Project Narrative

In addition to the details set forth in the Early Opening Project Narrative in Exhibit D, the Full Build project will include the following. The main entrance of Casino Area II will be centered on the crescent-shaped luxury hotel (i.e., Hotel I), with a lower-story façade that will provide a clear visual connection to the interior of the building; terrace dining will support an urban, pedestrian-friendly environment along the access drive. A glass canopy and porte-cochere (i.e., covered entrance) will accommodate drop-off and valet services for guest vehicles and bicycles below-grade.

The main entrance leading directly to the gaming floor of Casino Area II will be flanked by restaurants and the hotel lobby. A feature bar and table gaming area will command the center of Casino Area II and will be the main focal point. The feature bar will have a direct visual connection from the main entrance lobby to the south, and from the north escalators leading to the parking garage.

Access to a multi-purpose conference and entertainment space will be provided off the main entry lobby with a grand open stair and escalators. The two-story pre-function lobby will spatially connect function areas with the retail and gaming floor below. In addition, outdoor terraces at the second level will lead to a greenhouse which will provide fresh produce for year-round use in the restaurants. Service access to Casino Area II will be provided through a double-bay loading dock and mechanical area northwest of the gaming floor.

A northern entrance to Casino Area II will provide pedestrian access from a detached seven-story parking garage. In addition to the on-grade access, an enclosed pedestrian bridge from the garage will lead to a mezzanine level connecting to the gaming level of Casino Area II with open stair and escalators. At ground level adjacent to the north entrance of Casino Area II,

a glass pavilion ("winter garden") will connect with Casino Area I, creating a primary gathering area; this will be the drop-off point for dedicated charter buses and shuttles from Logan Airport and other major tourist or travel venues in Boston as well as from the MBTA Suffolk Downs Station.

The approximately 300-room, nine-story luxury hotel will feature breathtaking views of Boston and the Massachusetts Bay seacoast. On the second floor, guestrooms are being designed to complement the spa interior and provide a unique experience for hotel guests. On the all-suite penthouse level, large villas will anchor each end of the plan. The second hotel, which will be 12 stories and have approximately 150 rooms, will similarly feature spectacular views. Guest rooms will also be designed to provide unique guest experiences.

The Full Build-Out Component includes the items shown on the Site Plan attached hereto at Exhibit A, including, without limitation, the following:

Two distinct Gaming Areas providing approximately between 150,000 and 250,000 square feet of gaming space with between 4,000 and 6,600 gaming positions (consisting of an evolving combination of slot machines and table games);

1. A World Series of Poker™ room or rooms;
2. Two luxury hotels providing up to a maximum of 450 rooms;
3. Between 24,000 and 46,000 square feet of meeting and entertainment space;
4. Bars, nightclubs, and between 10 and 17 restaurants, including fine dining concepts, casual dining and a local marketplace, all of which containing between 1,700 and 2,600 seats;
5. Up to 30,000 square feet of retail space, including a spa;
6. Thoroughbred horse racing and simulcast wagering;
7. A seven-story parking garage with up to approximately 2,600 spaces, valet parking area for an additional up to approximately 460 cars, and up to approximately 2,100 surface parking spaces; and
8. A central utility plant.

EXHIBIT G

Legal Description of Property

A certain parcel of land situated in the Cities of Boston and Revere, County of Suffolk, Commonwealth of Massachusetts, commonly known as Suffolk Downs, shown on a plan entitled "Plan of Land in Boston and Revere" prepared by Rizzo Associates dated December 10, 1996, revised January 23, 1997 and recorded with Suffolk County Registry of Deeds in Book 21541, Page 247.

The above-described parcel includes the following Registered Land, more particularly described in Certificate of Title No. 112122:

> A certain parcel of land situated in that part of Boston, called East Boston in the County of Suffolk and Commonwealth of Massachusetts, situated on Waldemar Avenue. Said land is shown as Lots One (1) through Twenty-One (21) as shown on plan drawn by B.C. & J.J. Gallo, Civil Engineers, dated June 4, 1951, and September 18, 1953, as modified and approved by the Court, filed in the Land Registration Office as Plan No. 23113-A, a copy of a portion of which is filed with Certificate of Title No. 57352.

Excepting therefrom so much of the land shown as Parcels A-1(1) and A-1(2) on a Plan entitled "Plan of Land in Revere Massachusetts (Suffolk County)" dated November 25, 2002, last revised February 26, 2003, drawn by BSC Group and recorded with Suffolk County Registry of Deeds in Book 31003, Page 26, which parcels were conveyed to Revere Diner Realty LLC by Deed dated March 21, 2003 and recorded in Book 31003, Page 26.

Also, excepting therefrom so much of the land shown as Parcels C-4(1) and C-4(2)(Z) on a plan entitled "Plan of Land in Revere, Massachusetts (Suffolk County)" by BSC Group, dated March 30, 2005 and recorded with Suffolk County Registry of Deeds in Book 2005, Page 395, which parcels were conveyed to the City of Revere by deed dated October 4, 2005 and recorded in Book 38463, Page 300.

EXHIBIT H

Sustainability Provisions

1. Notwithstanding the requirements in the Act, (a) the Project, which shall mean each component thereof, shall be constructed to achieve and the Developer shall obtain LEED Gold for New Construction certification under the applicable LEED standard ("LEED Standards") within nine (9) months after the completion of construction of each component of the Project, and (b) within eighteen (18) months after the Early Opening Operations Commencement Date for the Early Operations Component and within eighteen (18) months after the Full Build-Out Operations Commencement Date for the Full Build-Out Component, the Developer shall go through the process and obtain LEED Gold for Existing Buildings certification using the LEED Standards for each component of the Project in the Early Operations Component and Full Build-Out Component, respectively. After receipt of the initial certification, the Project or applicable component thereof shall be subject to review and recertification for LEED Gold for Existing Buildings, pursuant to the LEED standards and procedures then in effect.

2. The Developer agrees that not more than forty percent (40%) of the total square footage of the Property will be either impervious area or pervious areas used for parking or vehicle ways or drives. This will result in the addition of approximately sixteen (16) acres of open space at the Property as well as a reduction of approximately twelve (12) acres of impervious pavement that currently exists at the Property. The increase in open space and pervious surfaces and decrease in impervious surfaces is expected to restore the Property's marsh-like ecology, increase infiltration and provide a natural barrier during storm events.

3. The Developer shall ensure compliance by itself, its Authorized Representatives and its customers and invitees of the Massachusetts statutory provisions regarding engine idling contained in M.G.L. c. 90, § 16A. In the event that the City determines, in its sole discretion, to enforce this provision, the Parties will discuss the means of implementing such enforcement including any requisite reimbursement to the City for all of the City's costs of enforcement.

4. The Developer will use best efforts to obtain as much food consumed at the Property (including, without limitation, prepared foods, raw products and finish products) from local producers, suppliers and distributors, meaning food products from vendors within the Commonwealth with particular emphasis on those producers, suppliers and distributors within the City.

5. In order to protect the community, during the design and operation of the Project, the Developer will address sea level rise and storm surges in accordance with all applicable Governmental Requirements of the Massachusetts Executive Office of Energy and Environmental Affairs (including, without limitation, its Climate Change Adaption Report, as the same may be supplemented and amended), the BRA, the City's Conservation Commission and other applicable Governmental Authorities. At a minimum, the Developer will develop a landscape and topography that responds to rise in sea level by elevating buildings, critical mechanical and electrical equipment, roadways and access points to create a safe haven for the community.

6. The Project will promote a diverse typology of open space that ranges from active pedestrian plazas to passive ecological parks offering a variety of amenities for public use and enjoyment.

7. The Project will connect neighborhoods and ecosystems by connecting the neighborhood and visitors to the Project and its surroundings through a network of pedestrian walkways, bikeways, parks and open spaces located on the Property that are accessible twenty-four (24) hours per day. The design aims to promote pedestrian circulation and create a unique arrival sequence and visitor experience that embraces the marsh-like setting of the Property and a landscape for the Project which is outwardly focused.

8. The Project will develop an innovative green infrastructure and pursue sustainable systems by using the landscape to purify storm water, improving the quality of the existing soils, providing opportunities for environmental education and creating a cherished and elegant landscape.

9. The Project will include a landscape that utilizes, to the greatest extent possible, native plant material and also is low in maintenance and irrigation needs.

10. The Project will reduce urban heat islands by, among other things, including a series of planted bio swales along the parking bays to collect stormwater along with shaded walkways that provide connections to public spaces and buildings. In addition, all surface parking lots constructed by the Developer shall be constructed in a manner consistent with the future installation of solar arrays.

11. The roof of the new Casino building will feature an approximately five thousand (5,000) square foot greenhouse filled with a hydroponic planting system. This system will produce fresh vegetables and fruits year round for all the restaurants in the Project thereby limiting delivery trucks on area roadways.

12. The Developer will use best efforts to utilize a balanced cut and fill soil strategy across the Property. Parking areas will be organized and graded so that they may be used as sites for future development, and the landscape on the Property will connect with the overall East Boston Greenway system.

13. The Project will include strategies for water conservation to capture rainwater from the building roofs for reuse, incorporating low flow fixtures technologies and selecting drought resistant plantings. One hundred percent (100%) of rainwater from the building roofs and approximately fifty percent (50%) of rainwater from garage improvements will be recovered and directed towards three (3) subterranean tanks located outside the structures. The rainwater captured in these tanks will be used for site irrigation, maintenance of the thoroughbred racing track, and air conditioning system coolant water, resulting in a savings of over three (3) million gallons of potable water annually. Building water usage will be reduced by approximately thirty-five percent (35%) from the baseline set forth in the LEED Standards, resulting in a reduction of over four (4) million gallons of potable water annually. By using drought resistant plantings, use of potable water for irrigation will be reduced by up to fifty percent (50%) from the baseline set forth in the LEED Standards.

14. The Project will be designed to reduce annual energy consumption by a minimum of twenty-five percent (25%) from the baseline set forth in the LEED Standards through conservation strategies, efficiency measures, and on-site renewable energy production. Such measures shall include:

a) The production of over 2.5 megawatts of "carbon free" on-site renewable energy through the use of photovoltaic arrays placed in several locations throughout the Property, which will meet a minimum of ten percent (10%) of the annual electric consumption at the Property;

b) The heat from engine(s) used to generate electrical power will be used to heat water for use at the Property, which is more sustainable and reduces carbon dioxide emissions than using electricity supplied through the grid or natural gas;

c) Space heating, cooling and ventilation will be done through the use of less restrictive ventilation ducts, high efficiency fans, and computer-controlled distribution;

d) Using natural lighting throughout the facility, including in Gaming Areas to allow the lighting control system (which uses photocells, occupancy sensors and other systems) to dim and shut off artificial lights when they are not needed;

e) The interior and exterior lighting systems of the buildings will employ high efficiency fixtures;

f) Heating and cooling will be generated through the use of high efficiency systems that perform substantially better than what is required by the building code;

g) Installation on all new Project improvements (other than the grandstand/clubhouse improvements) of high performance low-e glazing paired with enhanced thermal performance wall and roof assemblies, and in connection with grandstand/clubhouse improvements, the use of low-e glazing on all new glass installation;

h) Hotel guestrooms with smart controllers that shut off lighting and reduce heating and air conditioning of guestrooms when guests are not present;

i) Energy recovery devices will be used to precondition incoming air by recovering energy from exhaust air leaving the building;

j) Outside air, when cool enough, will be used instead of air conditioning to cool the buildings;

k) Energy consuming systems will be monitored and tracked using an advanced building management system and metering, allowing the Developer to analyze and reduce energy consumption over time by identifying areas of high energy consumption for targeted reductions; and

l) Installation and use of food-only compactors in coordination with an organic waste collection and recycling program to be administered with a third party anaerobic processing company.

15. The Developer will use best efforts to construct the Project in a manner that will reduce or eliminate bird strikes, particularly with respect to the glass used in the Project.

16. To encourage employees to bike, walk or use other forms of alternative transportation, the Developer shall provide secure bicycle storage areas, showers and changing rooms for employees.

17. The Developer, in consultation with the City, BRA and Boston Transportation Department to implement programs to significantly increase the percentage of its customers, visitors and employees that arrive and depart from the Project via some form of transportation other than single-occupancy vehicles. The Developer shall provide financial incentives and/or alternative transportation options, as needed, to its employees and patrons in support of this obligation.

EXHIBIT I-1

Developer's Quality Job Creation and Employment Commitments

The Developer shall impose a local hiring program for both construction and permanent jobs at the Project that will include the following components:

Construction Jobs:

Host and maintain a central job bank website (in English and Spanish) as a micro-site within the larger Project website.

The Developer shall demonstrate to the Gaming Accountability Office its efforts to provide construction employment opportunities to City residents and in particular East Boston residents.

The Developer will utilize best efforts to use the existing labor force in the Commonwealth, and in particular the existing labor force in the City, when hiring for new construction jobs, as required by Section 18(17) of the Act.

During the Term of this Agreement, the Developer will hold job fairs at the Property to make City residents aware of job opportunities available at the Project.

In furtherance of specific goals for the utilization of minorities, women and veterans on construction jobs, the Developer shall send to each labor union or representative of workers with which the Developer has a collective bargaining agreement or other contract or understanding, a notice advising the labor union or workers' representative of the Developer's commitments, as required by Section 15 of the Act.

Permanent Jobs:

Establish, fund and maintain human resource hiring and training practices that promote the development of a skilled and diverse workforce and access to promotion opportunities through a workforce training program that: (i) establishes transparent career paths with measurable criteria within the gaming establishment that lead to increased responsibility and higher pay grades that are designed to allow employees to pursue career advancement and promotion; (ii) provides employee access to additional resources, such as tuition reimbursement or stipend policies, to enable employees to acquire the education or job training needed to advance career paths based on increased responsibility and pay grades; and (iii) establishes a program or partnership to provide off-site child day-care, all as required by Section 18(9) of the Act.

Host and maintain a central job bank website (in English and Spanish) as a micro-site within the larger Project website.

The Developer will provide City residents with advance notice of hiring activities by publishing announcements in local newspapers approximately four (4) to eight (8) consecutive weeks prior to initial hirings.

Residents of Boston (together with residents of host and surrounding communities (as defined in the Act)) will be given first priority to apply for jobs during a specified "advance period," such advance period to be established jointly by the Developer and the Gaming Accountability Office.

Written flyers in English and Spanish will be distributed to local community-based organizations in East Boston to inform people about local advance period hiring and the Developer shall use best efforts to otherwise notify residents in the low income neighborhoods in East Boston proximate to the Project of potential job opportunities.

The Developer will donate a minimum of twenty-five (25) computers to be placed in strategic areas in East Boston neighborhoods (e.g. local libraries or community centers) as well as install and maintain a minimum of two (2) computers on-site to ensure that residents without computers can research and apply online for jobs at the Project.

During the Term of this Agreement, the Developer will hold job fairs at the Property to make City residents aware of job opportunities available at the Project.

The Developer will utilize best efforts to use the existing labor force in the Commonwealth, and in particular the existing labor force in the City, when hiring for new jobs, as required by Section 18(17) of the Act.

The Developer will make best efforts to ensure that fifty percent (50%) permanent employees at the Project are City residents, of which a substantial percentage should be from the East Boston community, all as more particularly set forth in the Agreement.

In furtherance of specific goals for the utilization of minorities, women and veterans permanent jobs, the Developer shall send to each labor union or representative of workers with which the Developer has a collective bargaining agreement or other contract or understanding, a notice advising the labor union or workers' representative of the Developer's commitments.

During the Term of this Agreement, the Developer shall use best efforts to work with the City's Public Schools Department to establish school to work programs for hospitality jobs at the City's vocational or public high schools.

During the Term of this Agreement, the Developer shall support the efforts of and actively engage with the Commission and community colleges to develop the Massachusetts Community College Workforce Training Institute and Massachusetts Casino Careers Training Institute at community colleges in the Commonwealth, particularly those within the City.

During the Term of this Agreement, upon request by the Gaming Accountability Office, the Developer shall provide the Gaming Accountability Office with information regarding its contracts with organized labor, including hospitality services, the number of employees employed at the gaming establishment, including detailed information on the pay rate and benefits for employees and contractors, and the Developer's plans to ensure labor harmony during all phases of the construction, reconstruction, renovation, development and operation of the gaming establishment.

Consistent with the corporate policy of the Developer to provide equal opportunity for all applicants and employees, the Developer will not discriminate on the basis of race, color, religion, sex, national origin, age, disability, sexual orientation, gender identity or expression, or veteran status. This policy applies to all areas of employment including recruitment, hiring, training, promotion, compensation, benefits, transfers and social and recreational programs.

The Developer shall implement a training and development program for permanent jobs at the Project that will include the following components:

Provide opportunities for team members to pursue personal and professional growth, to enjoy satisfying careers, to participate in training and development programs and to celebrate success including rewards and recognition for superior performance against measurable goals.

Provide new employees with learning programs such as the "Empire Series." The Empire Series is Operator's best-in-class and award winning learning program for all new employees. This program offers a lively and engaging environment that uses cutting-edge technology. In addition to such learning program, the Developer shall provide specialized training courses customized to meet employee learning needs.

If a position requires serving alcoholic beverages, authorizing complimentary alcoholic beverages, or managing a food and beverage operation, that employee must obtain an alcohol awareness certification card. All table games employees, valet attendants, limo drivers and security team members must also possess this certification.

Provide an educational assistance program that reimburses employees ninety percent (90%) of tuition costs up to a maximum of $3,000 per year for pre-approved undergraduate classes or up to a maximum of $4,000 per year for pre-approved graduate study at an accredited college or university.

Provide regulatory and compliance training such as Skillsoft, which is Operator's online learning platform used to deliver all regulatory and compliance training in addition to numerous professional development courses.

Implement the Caesars Code of Commitment, which includes a commitment to all employees to treat them with respect and provide satisfying career opportunities to invest in employees by providing excellent pay and valuable benefits, including health insurance and a retirement plan, and to share financial success through bonuses for

frontline employees, to encourage professional and personal growth through tuition reimbursement, on-the-job training, career development, and promotion from within, to actively seek and respond to employee opinions on all aspects of their jobs, from the quality of their supervisors to the quality of the casinos, and to value employees from every possible background, and who approach issues and problems from different perspectives.

Developer's obligations hereunder shall be subject to and consistent with the Operational Limitations.

EXHIBIT I-2

BOSTON RESIDENTS
CONSTRUCTION EMPLOYMENT PLAN
FOR
SUFFOLK DOWNS RESORT CASINO PROJECT
525 WILLIAM F. McCLELLAN HIGHWAY, EAST BOSTON

WHEREAS, [_____], a _____, having an address c/o Suffolk Sterling Racecourse, LLC, 525 William F. McClellan Highway, East Boston, Massachusetts 02128 (the "**Developer**"), and the **BOSTON REDEVELOPMENT AUTHORITY** (the "**Authority**"), a public body corporate and politic, and the **BOSTON EMPLOYMENT COMMISSION** (the "**Commission**") desire to bring the construction employment benefits of the Project, as hereinafter described, to residents of the City of Boston, minorities, women and veterans;

WHEREAS, Chapter 30 of the City of Boston Ordinances of 1983 established the Boston Residents Jobs Policy;

WHEREAS, the Mayor of the City of Boston signed an Executive Order on July 12, 1985, entitled "Extending The Boston Residents Jobs Policy" (the "**Jobs Policy Executive Order**") and on July 25, 1985, the Authority by vote adopted as policy the standards set forth in the Jobs Policy Executive Order;

WHEREAS, the Commission has been established by Chapter 12 of the City of Boston Ordinances of 1986, as amended by Chapter 17 of the Ordinances of 1986 (collectively, the "**Ordinance**"), in part to foster these goals and to see that they are realized, a copy of which is annexed hereto as **Exhibit A** and incorporated herein;

WHEREAS, pursuant to the terms of a Host Community Agreement dated as of _____, 2013 by and between the City of Boston and the Developer ("**HCA**"), which HCA was entered into as a condition of compliance with the terms of M.G.L. c. 23K, as the same may be amended from time to time (together with any rules, regulations, policies, and guidance promulgated thereunder, the "**Act**"), the Developer was required to provide certain construction job opportunities to residents of the City of Boston, minorities, women and veterans as required by the Act and the HCA; and

WHEREAS, the Cooperation Agreement between the Developer and the Authority pertaining to the Project, of even date herewith, requires the Developer to prepare and submit and the Authority to approve a Boston Residents Construction Employment Plan with specific provisions as required by the Act and the HCA.

NOW, THEREFORE, the Developer, the Authority and the Commission do hereby agree that the Boston Residents Construction Employment Plan for the Project (the "**Plan**"), which has

been approved by the Commission and the Authority and shall take effect as a binding obligation upon the parties hereto, shall be as follows:

Section 1: DEFINITIONS

As used in this Plan, the following terms shall have the meanings set forth below. Capitalized terms used in this Plan without definition which are defined in the Ordinance or the Commission's regulations shall have the meanings ascribed to them in the Ordinance or in the Commission's regulations, a copy of which has been delivered to the Developer.

1.1 Boston Residents Construction Employment Standards with Special Provisions Applicable to Gaming Establishments ("**Boston Residents Construction Employment Standards**"): The standards established pursuant to the Ordinance, the Jobs Policy Executive Order, and the Act specifically:

1) at least fifty percent (50%) of the total employee work hours in each trade shall be by *bona fide* Boston residents and in particular, residents of East Boston in accordance with the Ordinance and the Act;

2) at least twenty-five percent (25%) of the total employee work hours in each trade shall be by minorities in accordance with the Ordinance and the Act; and

3) at least ten percent (10%) of the total employee work hours in each trade shall be by women and veterans in accordance with the Ordinance and the Act.

1.2 Contractor: Any general contractor or construction manager for the Project engaged from time to time by the Developer, and, where the context requires, any subcontractor thereto.

1.3 Days: For the purpose of this Plan, the word "days" shall mean business days in Suffolk County, Massachusetts.

1.4 On-Site Monitor: An individual or individuals employed by the Contractor whose responsibility will be (i) to serve as compliance officer for the purpose of monitoring the performance of the Project with respect to the Boston Residents Construction Employment Standards, and (ii) the day-to-day implementation of this Plan. As used in Paragraphs 3.5 and 3.6, the phrase "**On-Site Monitor**" shall also include the individual designated by each subcontractor to serve as its compliance officer for the purpose of monitoring the performance of the Project with respect to the Boston Residents Construction Employment Standards. The On-Site Monitor may also perform other, unrelated duties for the Contractor or Subcontractor.

1.5 Project: The Developer proposes to construct a resort-style destination gaming establishment on the Property consisting of (i) two distinct gaming areas providing between 150,000 and 250,000 square feet of gaming space with between 4,000 to 6,600 gaming positions (consisting of an evolving combination of slot machines and table games), (ii) a World Series of Poker™ room or rooms, (iii) two luxury hotels providing a total of 450 rooms, (iv) between 24,000 and 46,000 square feet of meeting and

entertainment space, (v) bars, nightclubs and between 10 and 17 restaurants, including fine dining concepts, casual dining and a local marketplace, collectively containing between 1,700 and 2,600 seats, (vi) up to 30,000 square feet of retail space, including a spa, (vii) thoroughbred horse racing and simulcast wagering, (viii) a seven-story parking garage with up to 2,600 spaces, (ix) valet parking area for up to 460 additional vehicles, (x) up to approximately 2,100 surface parking spaces, (xi) a central utility plant, and (xii) other amenities and uses customarily accessory or ancillary to the foregoing

Section II: GENERAL REQUIREMENTS

2.1 The Developer shall use Best Efforts, as set forth in this Plan, to ensure that the Boston Residents Construction Employment Standards are met by Contractor and any subcontractor of Contractor in constructing the Project. The Developer shall host job fairs at the Project site, maintain an on-line central job bank noting available construction jobs in both in Spanish and English, and otherwise undertake outreach to notify the community, especially the East Boston residents, of construction job opportunities at the Project. The Developer shall provide evidence of such efforts to the Commission and the Gaming Accountability Office as required by this Agreement and the HCA.

2.2 The Developer shall incorporate into its construction contract with Contractor, and shall require Contractor to incorporate into each of its subcontracts, provisions requiring that Contractor and each subcontractor engaged in construction in connection with the Project comply with the Boston Residents Construction Employment Standards and this Plan. In furtherance of specific goals for the utilization of minorities, women and veterans on construction jobs, the Developer shall send to each labor union working on the Project a notice advising said unions of the Developer's obligations under this Agreement and the HCA. The Authority, the Commission or the Gaming Accountability Office may also direct the Developer in writing to enforce such provisions. The incorporation by reference of this Plan into any such construction contract or subcontract shall satisfy such obligation.

2.3 The Developer shall require that the Contractor designate an On-Site Monitor and that each subcontractor designate an individual to serve as the compliance officer for the purposes of monitoring the performance of the Project with respect to the Boston Residents Construction Employment Standards.

2.4 Documentation of the Developer's compliance herewith shall be maintained by the Developer; documentation of Contractor's and subcontractors' compliance herewith shall be maintained by the On-Site Monitor. The Developer shall provide copies of documentation maintained by it, and that maintained by the On-Site Monitor, to the Commission, as required herein or as requested from time to time by the Authority, the Commission or the Gaming Accountability Office.

2.5 The Developer shall cause Contractor to prepare a projection of work force needs over the course of construction and to complete a Projected Work Force Form in the form attached hereto as **Exhibit B** and incorporated herein by reference. Contractor shall

update such projection periodically during the course of construction, but shall not be required to do so more frequently than quarterly, except when required by the Commission based on reviews of the Project's percentage of completion as set forth in Paragraph 2.6. The Developer shall submit such projections to the Commission upon request.

2.6 The Commission, pursuant to its regulations, shall make determinations with respect to the Project as to compliance by the Developer and Contractor with the Boston Residents Construction Employment Standards. Such determinations may be made at time intervals as set out in one of the following two schedules, the Commission reserving the right to utilize the schedule which allows more frequent determinations:

(1) When construction of the Project is 25, 50, 75, and 100 percent complete; "**Percent Complete**" shall be measured by the percentage of the total worker hours expected to be worked on the Project, as set forth in the projection of work force needs shown on the Projected Work Force Form submitted pursuant to Paragraph 2.5. Upon request of the Developer, the Commission shall provide copies of such determinations to the Developer; or

(2) Every three (3) months from the date of the commencement of construction of the Project.

2.7 The Developer shall maintain, and shall cause Contractor and its subcontractors to maintain, records necessary to ascertain compliance with this Plan for one (1) year after the issuance of a Certificate of Occupancy for all or a portion of the Project.

2.8 The Developer shall meet with Contractor no less frequently than weekly throughout the period of construction of the Project to review the Boston Residents Construction Employment Standards. The Developer shall record and maintain the minutes of such meetings and forward copies thereof to the Commission and the Authority within ten (10) days of any such meeting.

Section III: PROCEDURES

3.1 The Developer shall furnish to the Authority and the Commission in writing the name, title, business address and telephone number of the person designated as the On-Site Monitor (designated by Contractor) and of the compliance officer so designated by each subcontractor for the Project.

3.2 Prior to the start of construction of the Project, representatives of the Developer and Contractor shall meet with a representative of the Commission for the purpose of discussing and agreeing upon the methods and procedures for the implementation of the provisions of this Plan. Such meeting (the "**Pre-Construction Conference**") shall also be attended by subcontractors to Contractor then selected, if any, each of whom shall have been notified by Contractor by mail or facsimile of the time, place, and purpose of such Pre-Construction Conference at least three (3) days in advance thereof.

3.3 Prior to the start of construction for the Project, Contractor and each subcontractor to Contractor then selected, if any, shall meet with appropriate representatives of the construction trade unions and the Commission for the purpose of reviewing the Boston Residents Construction Employment Standards and the estimated employment requirements for construction workers over the course of construction of the Project.

3.4 Within three (3) days after the employment or assignment of a worker to work on the Project, Contractor and each subcontractor will obtain from each such worker a completed and signed Residency Verification Form in the form attached hereto as **Exhibit C**. Copies of the applicable Residency Verification Form shall be submitted to the Commission together with the Weekly Utilization Report (as defined in Paragraph 3.5) on which such worker's employment is first reported. If Contractor or any subcontractor shall have requested a worker to complete such Residency Verification Form and the worker shall have refused to do so, then in lieu of such Residency Verification Form, Contractor or such subcontractor shall submit a sworn statement to the effect that the worker had been requested to complete and sign such form but refused.

3.5 One (1) week following the commencement of construction of the Project, and each week thereafter until the completion of construction of the Project, the On-Site Monitor shall complete and submit to the Commission, for the previous week, Weekly Utilization Reports in the form attached hereto as **Exhibit D**. In lieu of the form attached hereto as **Exhibit D**, the On-Site Monitor may submit payroll records containing the same information as is required on the form attached hereto as **Exhibit D**. The Weekly Utilization Reports or the payroll records described in this Paragraph 3.5, as applicable, may be submitted electronically to the Commission by the On-Site Monitor if acceptable to the Commission.

3.6 All persons applying directly to Contractor or any subcontractor for employment in construction of the Project who are not employed by the person or entity to whom or to which application for employment is made shall be referred to the Commission. The On-Site Monitor shall forward in writing to the Commission weekly, the names, home addresses, and telephone numbers of all persons applying directly to the Contractor or any subcontractor for employment in construction of the Project who are not employed by the person or entity to whom or to which application for employment is made. The On-Site Monitor shall also keep a written record of any person who was referred to Contractor or any subcontractor by the Office of Boston Residents Jobs Policy ("**BRJP**") for employment in construction of the Project, but was not hired, and the reasons why any person so referred was not hired. It shall be a sufficient reason for failure to hire any person so applying or referred that employment of such person would not comply with any union security clauses contained in any applicable collective bargaining agreements to which construction of the Project is subject.

3.7 Each request for qualified construction workers made by Contractor or any subcontractor to a union hiring hall, business agent or contractor's association shall contain a recitation of the Boston Residents Construction Employment Standards in the form attached hereto

as **Exhibit E** and a request that referrals for construction positions be referred in the same proportion as outlined in the Boston Residents Construction Employment Standards; provided, however, that if at the time of any such labor request the requesting party's work force composition falls short of the Boston Residents Construction Employment Standards in any one or more categories, such labor request shall seek referrals in such proportion among such categories as would be necessary to more fully achieve the proportions set forth in the Boston Residents Construction Employment Standards. In the event that the union hiring hall, business agent or contractor's association to whom or to which such a request has been made fails to fully comply with such request, the requesting party's On-Site Monitor shall request written confirmation from the union hiring hall, business agent or contractor's association that there are insufficient workers in the categories specified in such request then shown on the list of unemployed workers maintained by such union hiring hall, business agent or contractor's association. Copies of any confirmation so obtained shall be submitted promptly to the Commission. Copies of any request for qualified workers made at a time that the requesting party's work force composition falls short of any one or more of the Boston Residents Construction Employment Standards shall be forwarded contemporaneously to the BRJP.

3.8 During construction of the Project, representatives of the Commission may visit the Project site periodically during normal working hours, to verify the information in the Weekly Utilization Reports, Residency Verification Forms or other documentation required pursuant to this Agreement. Such representatives shall comply with all safety and site control requirements imposed by the Developer or Contractor.

Section IV: DETERMINATION OF COMPLIANCE

4.1 Failure by the Developer, Contractor or any subcontractor, as the case may be, as determined by the Commission at the determination intervals set forth in Section 2.6 hereof, (i) to comply with this Plan and the Boston Residents Construction Employment Standards contained herein, or (ii) to use Best Efforts (as defined in Chapter 12 of the Ordinances of 1986, as amended) in attempting to comply with this Plan, the HCA, the Act, or the Boston Residents Construction Employment Standards, shall constitute noncompliance herewith. Any independent determination by the Commission of noncompliance as herein defined shall be made only after the Commission has held a public hearing upon the issue of such non compliance, notice of which shall have been given in writing to the Developer and Contractor at least thirty (30) days prior to such hearing.

Section V: SANCTIONS/CERTIFICATE OF COMPLIANCE

5.1 The Developer and Contractor shall be subject to only such sanctions as are authorized by Section 9 of the Ordinance, the Act, and the HCA, as the case may be.

5.2 In recommending or imposing sanctions hereunder, the Authority and the Commission shall comply with all of the terms, provisions, and procedures set forth in the Ordinance, the Act, the HCA, and in Section 4.1 hereof.

5.3 Pursuant to and in accordance with the Ordinance, the Developer shall deposit into an escrow account established by the Commission or the Authority an amount in cash or other suitable security equal to the lesser of (i) one tenth of one percent (0.1%) of the total cost of construction of the Project as stated in the building permit application or (ii) $10,000. Such deposit shall be made not later than issuance of a building permit for the Project. Such deposit shall be held until the Commission has issued a Certificate of Compliance (as hereinafter defined) for the Project indicating that the Developer and Contractor have complied with this Plan or have satisfied any fines recommended by the Commission. Upon issuance of such Certificate of Compliance, such funds (or any remaining portion thereof) will be returned to the Developer. Failure to deposit such sum shall itself be deemed noncompliance and shall be grounds for the imposition of sanctions, subject to the provisions hereof.

5.4 All fines recommended by the Commission in accordance with the Ordinance shall be deemed imposed upon the Developer by the Authority in its capacity as the contracting agency within the meaning of the Ordinance.

5.5 During the pendency of construction of the Project, the Developer may request from BRJP or counsel to the Commission, written confirmation of the status of the Developer's compliance with the provisions hereof with respect to the Project. Such written confirmation shall be provided as soon as practicable after receipt of such written request. Upon completion of construction of the Project (as evidenced by the final Certificate of Occupancy for the Project), the Commission shall, in accordance with the rules and regulations of the Commission, issue a "Certificate of Compliance" indicating that the Developer and Contractor have complied with this Plan with respect to the Project, and/or have satisfied any fines recommended by the Commission. If such is not the case, then the Commission shall so notify the Developer in writing, specifying the area(s) of noncompliance. Upon the curing of the same, the Commission shall promptly issue a Certificate of Compliance to the Developer with respect to the Project which shall be deemed approval by the Commission.

Section VI: MISCELLANEOUS

6.1 The provisions of this Plan are severable, and if any shall be held invalid, unconstitutional, or otherwise unenforceable by any court of competent jurisdiction, the decision of such court shall not invalidate or impair any of the remaining provisions.

6.2 This Plan shall be governed by and construed in accordance with the laws of the Commonwealth of Massachusetts.

6.3 All notices required or permitted to be given under this Plan shall be in writing, signed by duly authorized officers, and shall be deemed delivered if (i) mailed, postage prepaid, by registered or certified mail, return receipt requested, (ii) delivered by hand, or (iii) sent for overnight delivery by a nationally recognized courier service to the principal office of

the party to which it is directed, which is as follows unless otherwise designated by written notice to the other party:

Authority: Boston Redevelopment Authority
One City Hall Square, 9th Floor
Boston, MA 02201-1007
Attention: Director

with copy to: Boston Redevelopment Authority
One City Hall Square, 9th Floor
Boston MA 02201-1007
Attention: General Counsel

Commission: Boston Employment Commission
43 Hawkins Street
Boston, MA 02114
Attention: Counsel

BRJP: Office of Boston Residents Jobs Policy
43 Hawkins Street
Boston, MA 02114

Attention: Chair of the Board and COO

With a copy to: DLA Piper LLP
33 Arch Street, 26th Floor
Boston, MA 02110-1447
Attention: Charles A. Baker, III

The Developer shall, upon selection of the Contractor, provide written notice to the Authority of the notice address for the Contractor.

6.4 From and after the date of this Plan, any increases in the percentages set forth in the Boston Residents Construction Employment Standards and any changes which serve to broaden the definitions of "Boston Resident" as set forth in the Ordinance shall not be applicable to the Project.

6.5 From time to time the Commission may modify the forms of reporting and documentation referred to in this Plan and attached as **Exhibits B, C, D** and **E**. The Developer agrees that upon receipt of written notice from the Commission of any such

modification or revision, the Developer will comply with any reasonable modifications within a reasonable time of receipt of such notice.

6.6 The liability of the Developer, and its successors and assigns (including, without limitation, mortgagees) arising hereunder shall be limited solely to its or their interest in the Project. Neither the Developer nor any trustee, beneficiary, partner, member, stockholder, manager, officer, director, agent or employee of the Developer or any of its or their successors and assigns (including, without limitation, mortgagees) shall be personally or individually liable under this Plan, nor shall it or they be answerable or liable beyond the extent of its or their then interests in the Project.

6.7 No trustee, beneficiary, partner, member, stockholder, manager, officer, agent or employee of Contractor or any of its successors and assigns shall be personally or individually liable under this Plan, nor shall it or they be answerable or liable beyond the extent of its or their then-interest in the Project.

6.8 Section titles of this Plan are for convenience of reference only, and shall be disregarded in construing any provision hereof.

6.9 In the case of any inconsistency between the provisions of this Plan, the HCA, the Act, and the Ordinance, or of the provisions of any rules or regulations which may be adopted by the Commission pursuant to the Ordinance, the provisions of the Ordinance shall govern.

6.10 This Plan shall be binding upon and enforceable against the successors and assigns of the parties hereto (other than mortgagees of the Project or those claiming through mortgagees of the Project unless said party obtains title to the Project and proceeds with development of the Project), it being understood and agreed that the Developer and its affiliates shall have a right to transfer or assign to another party or parties its or their rights and interests under this Plan and in all or a portion of the Project site.

6.11 It is the intention of the parties that the provisions of this Plan may be enforced only by the parties hereto, and that no other person or persons shall be authorized to undertake any action to enforce any provisions hereof without the prior written consent of the parties.

6.12 Nothing in this Plan shall be construed as an undertaking by the Developer to construct or complete the Project. If and to the extent that the Project is undertaken by the Developer, the sole obligation of the Developer shall be to fulfill the monetary and other obligations set forth in this Agreement with respect to the Project.

CITY OF BOSTON

IN THE YEAR NINETEEN HUNDRED AND EIGHTY SIX

AN ORDINANCE.

ESTABLISHING THE BOSTON EMPLOYMENT COMMISSION

Be it ordained by the City Council of Boston, in accordance with the provisions of Massachusetts General Laws Chapter 43B, Section 13, and any other applicable law, as follows:

Preamble: Policy of the City of Boston

WHEREAS there is a need to ensure that Boston residents receive maximum benefits from the growing private economy of their city and the economic resurgence of office, hotel, retail, institutional, and unsubsidized residential development, including the permanent jobs which emanate from this economic expansion; and

WHEREAS there is unemployment and underemployment in the City of Boston, both among majority and minority residents; a

WHEREAS Boston is experiencing a resurgence in its econo that is creating the potential for unprecedented economic opportunity; and

WHEREAS Boston has fully established itself as the econo center for the entire New England region and is generating wealth and revenues for people throughout the region; and

WHEREAS one principal aspect of a strong and vibrant cit is the ability of its breadwinners to gain access to secure jobs that pay a living wage; and

AN ORDINANCE

have historically been underrepresented in the workforce; a

WHEREAS an Ordinance establishing the Boston Residents Policy, Ordinances of 1983, Chapter 30, was promulgated to insure that Boston residents, minorities, and women receiv preference in projects that have city funds or state or fe funds administered by the city; and

WHEREAS the Mayor issued an Executive Order relating t Boston Residents Jobs Policy, dated July 12, 1985, which established Resident Construction Employment Standards to further ensure employment for Boston residents, minoritie women; and

WHEREAS under the Boston Residents Jobs Policy, Bosto residents are enjoying greatly improved access to jobs in downtown construction industry; and

WHEREAS it is the policy of this City government to that all people enjoy fair and open access to employment permanent jobs in the private sector; and

WHEREAS it can be shown that broader cooperation fro private sector can produce meaningful employment opportu for Boston residents who want and need them; and

AN ORDINANCE

WHEREAS job placement is contingent upon proper job training and without necessary skills some Boston residents cannot secure permanent jobs; and

WHEREAS it is essential to the success of the 1983 Boston Residents Jobs Policy Ordinance and the 1985 Mayor's Executiv Order that projects and employment plans be monitored, that findings be made with respect to compliance, and that recommendations for sanctions be determined, and that all th be done in a manner that provides for the due process rights all parties; and

WHEREAS it is essential to engender an atmosphere of cooperation between the public and private sectors with resp to permanent jobs for Boston residents, minorities, and wom and

WHEREAS the following is declared to be in the public interest; now

THEREFORE, be it ordained as follows:

SECTION ONE: Definitions

For the purposes of this Ordinance, the following definitions shall apply, unless the context otherwise requi

AN ORDINANCE

(1) "Best Efforts." Developers and contractors may rely on traditional referral methods in the hiring of journeymen, apprentices, advanced trainees and helpers. Developers and contractors also shall implement affirmative action steps which include the following to the extent that such steps do not conflict with any applicable collective bargaining agreements:

As to Contractors:

(i) The contractor shall designate and shall require each subcontractor to designate an individual to serve as a compliance officer for the purpose of pursuing the Boston Residents Construction Employment Standards ("Standards").

(ii) Prior to the start of construction, the contractor and each subcontractor then selected shall meet with appropriate representatives of the construction trade unions, representatives from the Mayor's Office of Jobs and Community Services, and the awarding or contracting authority for the purpose of reviewing the Standards and the estimated employment requirements for construction

training programs of the particular trades participating in the Covered Project.

As to Developers:

(x) Developers of Covered Projects shall incorporate in every general construction contract or construction management agreement an enumeration of the Standards and shall impose a responsibility upon any such general contractor or construction manager to take all steps enumerated in clauses (i) - (ix) in Section One (1) and to incorporate such Standards in all subcontracts and impose upon all subcontractors the obligation to take such steps.

(xi) The developer shall meet with the contractor no less frequently than weekly throughout the period of construction of the Covered Project to review the contractor's compliance with such Standards and steps. The developer shall maintain minutes of such meetings and shall forward a copy of such minutes to the Mayor's Office of Jobs and Community Services within ten (10) days of each such meeting

activity over the construction period of the Covered Project.

(iii) Whenever any person involved in the construction a Covered Project makes a request to a union hiri hall, business agent or contractor's association for qualified construction workers, the request shall ask that those qualified applicants referre for construction positions be referred in the proportions specified in the Boston Resident Construction Employment Standards and shall, further, contain a recitation of such Standards. However, if the requesting party's workforce composition at any time falls short of any one o more of the proportions specified in the Standa the requesting party shall adjust his or her request so as to seek to more fully achieve the proportions specified in the Standards. If the union hiring hall, business agent or contractor association to whom a request for qualified employees has been made fails to fully comply w such request, the requesting party's compliance

officer shall seek written confirmation from the hall, agent o association that there are insufficient employees in the categories specified in the request and that such insufficienc is documented on the unemployed list maintained by the hall, agent or association. Copies of any confirmation so obtained shall be forwarded to the Commission. Copies of any requests for qualified employees made at a time that the requesting party's workforce composition falls short of any one or more such Standards shall be forwarded contemporaneously to the Skills Bank.

(iv) All persons applying directly to the Contractor o any subcontractor for employment in construction a Covered Project who are not employed by the pa to whom application is made shall be referred by said party to the Mayor's Office of Jobs and Community Services, and a written record of such referral shall be made by said party, a copy of which shall be sent to such Office of Jobs and Community Services.

(v) Contractors shall maintain a current file of the

names, addresses, and telephone numbers of each Boston resident, minority, and woman who has sought employment with respect to a Covered Project, or who was referred to the contractor by the Mayor's Office of Jobs and Community Servic but was not hired. The contractor shall maintain a record of the reason any such person was not hired. If the constructio of the Covered Project is subject to any union collective bargaining agreements, it shall be deemed a sufficient reaso for failure to hire that the applicant for employment was no union member.

(vi) The contractor shall in a timely manner complete and submit to the Commission a projection of workforce needs over the course of the construc of the Covered Project. Such a submission shall reflect needs by trade for each month of the construction process.

(vii) The contractor shall obtain from each worker employed in the construction of the Covered Pro a sworn statement containing the worker's name place of residence.

AN ORDINANCE

(viii) One week following the commencement of construct of the project, and each week thereafter until s: work is completed, the contractor shall complete and submit to the Mayor's Office of Jobs and Community Services for the week just ended a rep which reflects (a) for each employee, the employee's name, place of residence, race, gende trade and the total number of worker hours he or she worked, and (b) the total worker hours of it total workforce.

(ix) The contractor and each subcontractor shall maintain records reasonably necessary to ascerta compliance with the steps detailed in clauses (i through (viii) hereof for at least one year afte the issuance of a Certificate of Occupancy for t Covered Project. In its review of records of a construction project submitted to demonstrate compliance with these steps, the Commission shal take into consideration any affirmative action outreach programs and affirmative action job

CITY OF BOSTON

IN THE YEAR NINETEEN HUNDRED AND

AN ORDINANCE

AMENDING THE BOSTON EMPLOYMENT COMMISSION

Be it ordained by the City Council of Boston, in accordance with the provisions of Massachusetts General Laws Chapter 43B, Section 13, and any other applicable law, as follows:

SECTION ONE: The Ordinance establishing the Boston Employment Commission is hereby amended in section one (v) by striking the last sentence as it appears and inserting the following in place thereof "If the construction of a the Covered Project is subject to any union collective bargaining agreements, it shall be required that the employee complies with any lawful union security clauses contained in such agreement."

SECTION TWO: This Ordinance shall take effect upon passage.

In City Council September 10, 1986. Passed.
Approved by the Mayor September 26, 1986.

Attest:

City Clerk

(xii) The developer shall comply with the escrow deposit requirements of Section Eight hereof.

(2) "Boston Employment Commission", hereinafter "Commission." There shall be in the City a Commission known a the Boston Employment Commission, consisting of seven (7) members, all appointed by the Mayor. The Commission shall hav the powers and duties set forth in Section Three herein. The members of the Commission shall be deemed special municipal employees for purposes of Chapter 268A of the Massachusetts General Laws.

(3) "Boston Resident." Any person for whom the princip place where that person normally eats and sleeps and maintai his or her normal personal and household effects is within t city limits of the City of Boston.

(4) "Boston Residents Construction Employment Standard The standards as contained below:

(i) At least fifty percent (50%) of all Worker-Hour a craft-by-craft basis in Covered Projects shal worked by Boston Residents;

(ii) At least twenty-five percent (25%) of all

AN ORDINANCE

Worker-Hours on a craft-by-craft basis in Covered Projects shall be worked by Minority Persons;

(iii) At least ten percent (10%) of all Worker-Hours on a craft-by-craft basis in Covered Projects shall be worked by women.

(5) "Boston Resident New Hire Goals" The Commission will determine baseline hiring goals for Boston residents, minorities and women, such determination to be based upon a consideration of:

(i) current workforce composition;

(ii) the composition of the workforce that is unemployed

(iii) numbers and categories of new job opportunities being created in Boston; and

(iv) an examination of employment trends in Boston over the last 5 years.

The Commission shall reevaluate annually, and modify if appropriate, such goals based upon the number of permanent full-time equivalent new hires of Boston residents, minorities and women during the previous calendar year.

(6) "Covered Projects." All projects, contracts, or

AN ORDINANCE

agreements within the jurisdiction of:

(i) the Boston Residents Jobs Policy, Ordinances of 1983, Chapter 30 (hereinafter referred to as "Jobs Ordinance") and for which the contract or agreement is executed after the effective date of this ordinance; and

(ii) any new construction or substantial rehabilitation project in the city to which any partial or full building permit has not already been issued for this specific construction or rehabilitation, dedicated to a retail, restaurant, and/or institutional use as defined in the Boston Zoning Code, which requires approval by the Zoning Board of Appeals and in which it is proposed to erect a structure or structures having a total gross floor area (exclusive of all accessory parking garage space) in excess of one hundred thousand (100,000) square feet or to enlarge or extend a structure or structures so as to increase its (or their) gross floor area (exclusive of all accessory parking

AN ORDINANCE

garage space) by more than one hundred thousand (100,000) square feet or to substantially rehabilitate a structure or structures having, or to have, after rehabilitation, a gross floor area (exclusive of accessory parking garage space) of more than one hundred thousand (100,000) square feet.

(7) "Major Employer." Any corporation, partnership, individual, or institution which employs more than five hundred people to work within the City of Boston.

(8) "Mayor's Office of Jobs and Community Services," hereinafter "OJCS". The agency within the City of Boston government responsible for compiling compliance information in accordance with the Boston Residents Construction Employment Standards and the Minority Business Enterprise/Women's Business Enterprise Programs.

(9) "Minority Business Enterprise" ("MBE") A business organization in which 51% in the aggregate of the beneficial ownership is held by one or more minority persons.

(10) "Womens Business Enterprise" ("WBE") A business organization in which 51% in the aggregate of the beneficial ownership is held by one or more women.

AN ORDINANCE

(11) "Minority Person" or "Minority". Any person who is Black, Hispanic, Asian, or Native American, as these terms are defined by the United States Census Bureau.

(12) "Permanent Job." Any full-time position, or its equivalent, that an employer would fill year-round and contin to fill indefinitely in a particular location.

(13) "Skills Bank." A job screening and referral bank maintained by OJCS, which shall refer residents to available jobs and/or to appropriate training programs, including but n limited to, programs offered at the Hubert Humphrey Occupational Resource Center.

(14) "Voluntary Employment Plan." Any plan to promote hiring for jobs in Boston of Boston residents, minorities, and/or women developed by a Major Employer or a group of Maj Employers.

(15) "Worker-Hours." The sum total of all hours worked all persons performing construction work.

SECTION TWO: Scope of Jurisdiction

The Commission's jurisdiction shall extend to: (1) Cove Projects and (2) assistance in the formulation and monitorin

AN ORDINANCE

of Voluntary Employment Plans.

SECTION THREE: Powers and Duties

A. Covered Projects

(1) The Commission shall make determinations as t compliance by developers and contractors with the Boston Residents Construction Employment Standards. The Commission shall gather and receiv compliance information from OJCS, investigate noncompliance complaints, make compliance determinations and, where appropriate, shall recommend sanctions to the awarding or contracting authority. The Commission may gather compliance information at any time and shall make compliance determinations in phases for each Covered Project in accordance with Sections Five, Six and Seven herein. For projects under construction upon the passage of this ordinance, all existing contracts and agreements shall remain in full force and effect and the provisions of this ordinance shall not otherwise apply.

AN ORDINANCE

(2) The Commission shall have the authority to require developers of Covered Projects to submit: (i) detailed plans which show how the developer intends to meet the Boston Residents Construction Employment Standards; and (ii) detailed plans which show how the developer intends to meet MBE/WBE goals contained in or applicable to City contracts.

(3) In the review of such detailed plans, the Commission shall consider any affirmative action outreach programs and affirmative action job training programs of the particular trades participating in the Covered Project and participation, if any, of the developer or the contractor in any such program.

(4) The Commission shall monitor MBE/WBE goals contained in or applicable to City contracts. The Commission shall receive compliance information from OJCS and shall recommend to the awarding or contracting authority appropriate remedies for

noncompliance.

(5) The Commission shall monitor Davis-Bacon Act requirements contained in City agency or authority contracts. The Commission shall receive complianceinformation and shall forward any information concerning apparent noncompliance to appropriate federal agencies.

B. Voluntary Employment Plans

(1) The Commission shall meet with a group of representatives of Major Employers to review voluntary aggregate hiring goals set by said employers.

(2) The Commission shall receive information concerning the success in meeting the voluntary aggregate hiring goals.

The Commission shall encourage a group represent the Major Employers to issue an annual public report on the success of this effort and of voluntary business programs such as Boston Summe Jobs Program, the Boston Compact and BostonWorks

(3) The Commission shall encourage Major Employe to adopt Voluntary Employment Plans, which promot a collaboration between the public and private sectors to expand employment opportunities for Boston residents, minorities and women. The Commission shall encourage Major Employers to incorporate the Boston Resident New Hire Goals i their Voluntary Employment Plans. The Commissio shall advise OJCS and other City agencies of the amounts and types of assistance identified by Ma Employers as being necessary to achieve the goal included in their Voluntary Employment Plans. S assistance may include, but is not limited to, j training, adult literacy and referral services. The Commission may conduct surveys to assess the progress made toward hiring goals as to Boston residents, minorities and women.

C. General

(1) The Commission shall have the authority to promulgate regulations as to matters within the

AN ORDINANCE

Commission's purview after public notice and hearing and upon majority vote of all members.

(2) The Commission shall cause to be created, in conjunction with the Mayor's Office of Jobs and Community Services, a job training program. Said job training program shall be conducted at the appropriate sites which may include the Hubert Humphrey Occupational Resource Center, or its successor, or other appropriate skills training facilities. The purpose of said training program is to provide skills training to any Boston Resident in order to be fully qualified for entry into existing apprenticeship programs or jobs. Subject to appropriation by the Mayor and the City Council, any fines levied against the escrow fund set out in Section Eight shall be for the benefit of this jobs training program and no other.

SECTION FOUR: Composition

The Commission shall be composed of seven (7) members, all of whom shall be appointed by the Mayor. The Commission shall

AN ORDINANCE

be representative of the interests of business, minorities, women, organized labor, Boston Building Trades Council, and th Mayor's Jobs Liaison Committee. Members of the Commission shall have demonstrated commitment to equal employment opportunity. All members of the Commission shall be Boston residents or shall maintain their principal place of business in Boston.

(1) Term of Office

Commission members shall be appointed to two-year terms, and members shall serve until their successors are duly appointed. If a vacancy on the Commission occurs before a te expires, that vacancy shall be filled by appointment by the Mayor for the balance of the unexpired term.

(2) Removal

The Mayor may remove a member for just cause by filing a written statement to that effect with the City Clerk. Reason for just cause shall include but not be limited to a pattern nonattendance, lack of residency or employment in the City of Boston, noncompliance with the procedures established under Section Five herein, failure to disclose conflicts of interes

incapacity due to illness, or conviction of a crime. The Mayor's determination that just cause for removal exists shall be conclusive.

(3) Chair.

The Chairperson of the Commission shall be designated by the Mayor and shall serve in that capacity for a term of two years.

(4) Quorum

In no event shall a quorum be fewer than four members of the Commission.

(5) Voting

Every vote of the Commission shall require an affirmative vote of no fewer than four (4) members of the Commission.

SECTION FIVE: Procedures

Actions or determinations under Section Seven, Eight or Nine herein shall be taken or made in accordance with the following administrative procedures:

(1) Hearings and Notice to Parties. A party subject t the jurisdiction and recommendation power of the Commission shall be entitled to a hearing and shal

be given at least fourteen (14) calendar days notice of any such hearing directly affecting his or her interests, such notice to be in writing to the party and sent by mail, postage prepaid, first class, to the party's usual place of business.

(2) Method. Decisions to recommend sanctioning a party shall require a majority vote of the Commission. The Commission shall adopt procedures, voted by a majority of all members, to establish the time, place, and manner for its members to meet and vote and for making determinations of compliance and recommendations to awarding authorities or agencies. All protections necessary to fulfill due process requirements shall be incorporated in the aforementioned procedures. Such procedures and any revisions to such procedures shall be submitted in writing to the Mayor and OJCS within twenty-one (21) calendar days of their scheduled adoption.

(3) Public Meetings. The Commission shall be subject to the requirements of the Massachusetts Open Meetings Law, G.L. c.39, §23A-C.

incapacity due to illness, or conviction of a crime. The Mayor's determination that just cause for removal exists shall be conclusive.

(3) Chair

The Chairperson of the Commission shall be designated by the Mayor and shall serve in that capacity for a term of two years.

(4) Quorum

In no event shall a quorum be fewer than four members of the Commission.

(5) Voting

Every vote of the Commission shall require an affirmative vote of no fewer than four (4) members of the Commission.

SECTION FIVE: Procedures

Actions or determinations under Section Seven, Eight or Nine herein shall be taken or made in accordance with the following administrative procedures:

(1) Hearings and Notice to Parties. A party subject to the jurisdiction and recommendation power of the Commission shall be entitled to a hearing and shal

(4) Records.

The Commission shall keep records of its meetings and shall record no less than the following: the time and place of the meeting; the topic(s) discussed at the meeting; members in attendance at the meeting; any votes taken; and any disclosure of members of conflicts of interest. The Chairperson or his or her designee shall maintain such records in a good and legible condition. The records shall be available for inspection by any member of the public upon reasonable notice.

SECTION SIX. Standards for Compliance

The Commission shall use the Boston Residents Construction Employment Standards to monitor compliance of Covered Projects with this ordinance. A Covered Project shall be deemed to be in compliance if (1) the statistical monitoring data at the relevant determination date, as set forth in Section Seven hereof shows compliance with the Boston Residents Construction Employment Standards; or (2) if the Commission determines that Best Efforts have been made to comply with the Boston Residents

AN ORDINANCE

Construction Employment Standards.

SECTION SEVEN: Determination of Compliance

The Commission shall make determinations as to compliance by developers and contractors of Covered Projects with the Boston Resident Construction Employment Standards at time intervals as set out in one of the following two schedules, whichever allows for more frequent determinations:

(1) When the Covered Project is 25, 50, 75 and 100 percent complete, or,

(2) Every three months from the date of commencement of the Covered Project.

"Percent complete" shall be measured by the percentage of the total worker hours expected to be worked on the project. The Commission shall monitor that percentage and shall include it in its monitoring reports.

SECTION EIGHT: Establishment of Escrow Fund

An escrow fund shall be established for each project which is a Covered Project, as defined in Section One (6)(ii) herein. Payment into the escrow fund shall be made by the developer when the developer secures permanent financing for

the Covered Project. The developer shall pay into the escrow fund an amount equal to one-tenth of one percent (.1%) of the total construction cost of the project as stated in the building permit application for the Covered Project; provided, however, that if either the developer or contractor has been subject to a determination of noncompliance at more than two determination dates in any prior Covered Project in which the have participated in the preceeding twenty-four months, the amount of the escrow fund required for the Covered Project shall be two-tenths of one percent (.2%) of such construction cost. The developer shall deposit these funds with an escrow agent agreed upon by the parties pursuant to an escrow agreement to which the Commission, the awarding or contracting agency and the developer are parties, who shall hold said fur for the purpose of satisfying any accrued fines levied in relation to a project.

The escrow agent, at the time of deposit into the escrow account, shall deduct all fines which have accrued against t fund to that date. There shall be a written escrow agreemen detailing the terms under which the escrow funds are held.

Such agreement shall provide, at a minimum, that any demand fo payment from the escrow account which is made upon the escrow agent by the awarding or contracting authority shall be made i writing and shall be accompanied by a written statement of the reason for such demand, including any factual findings supporting such reason. The demand shall further instruct th escrow agent that he/she is to take no action on the demand f at least forty-eight (48) hours after receipt. A copy of the demand shall be simultaneously served upon all other parties the escrow agreement.

Interest, if any, accrued by the fund, shall remain in an become a part of the escrow fund until such time as the fund shall be released. When all necessary permits for the use of the building have been issued to the developer, including but not limited to an occupancy permit and a finding of complianc has been made by the Commission, all monies in the escrow fu including any accrued interest, shall be released and returne to the developer.

SECTION NINE: Sanctions

The Commision shall have the authority to recommend to t

awarding or contracting agency that sanctions against the developers and contractors of Covered Projects be imposed for noncompliance with the Boston Residents Construction Employment Standards and/or for non-compliance with section Three (A)(2) of this ordinance. The Commission shall recommend the imposition of any or all three of the following sanctions:

(1) Fines to a maximum of three hundred dollars ($300.00) for each violation as determined by the Commission when such developer or contractor was not in compliance, as defined in Section Six, each day of non-compliance to be considered as a separate violation, to be levied against the escrow fund as established by Section Eight herein, provided that fines may still be levied and will still be due if the escrow account is exhausted;

(2) Preclusions from the award of municipal contracts and competitions for public development rights for a period of up to three (3) years, provided that this sanction may only be recommended at the

completion of the Covered Project; or

(3) Sanctions as authorized by the Jobs Ordinance or incorporated in contracts.

The recommendation of sanctions under this section shall not preclude and shall be in addition to any action or sanction authorized by contract or agreement or otherwise authorized by law.

SECTION TEN: Staffing

The Commission shall have staff consistent with the Commission's purpose. The Director of OJCS shall be the Executive Director of the Commission, provided, however, that said Director shall be wholly compensated for his/her duties as Director from the budget of OJCS.

SECTION ELEVEN: Conflicts of Interest

No member shall appear before the Commission or represent any person, firm, corporation or other entity in any matter pending before the Commission. Members shall not participate in a discussion or a decision of the Commission on any matter in which they are directly or indirectly interested in a personal or a financial sense. Any disclosure of conflict of

AN ORDINANCE

interest shall be entered into the records of the Commission

SECTION TWELVE: Severability

The provisions of this ordinance are severable, and if a provision shall be held invalid or unconstitutional by a decision of any court of competent jurisdiction such invalid shall not impair, or otherwise affect, any other provisions this ordinance.

SECTION THIRTEEN: Effective Date

This ordinance shall take effect 30 days after enactmen

In City Council July 30, 1986. Passed.

Approved by the Mayor August 12, 1986.

BOSTON RESIDENTS EMPLOYMENT AGREEMENT

Suffolk Downs Resort Casino Project
525 William F. McClellan Highway, East Boston, Massachusetts

This Boston Residents Employment Agreement ("Agreement") is made as of the ___ day of _____, 2013, by and between the Office of Jobs and Community Services ("JCS"), a division of the Economic Development Industrial Corporation ("EDIC") and [_____], a _____ [_____], having an address c/o Suffolk Sterling Racecourse, LLC, 525 William F. McClellan Highway, East Boston, Massachusetts 02128 (the "Developer").

The Developer is the developer of a project known as the Suffolk Downs Resort Casino Project (the "Development"). The Developer is a party to a Cooperation Agreement, a Development Impact Project Plan Agreement, a Boston Residents Construction Employment Plan Agreement, and a Transportation Access Plan Agreement (collectively, the "Development Agreements"). The Development has been reviewed by the Boston Redevelopment Authority (the "BRA") in accordance with Article 80B of the Boston Zoning Code and an Adequacy Determination under said Article 80 has been issued. **[TO BE ADDED TO EXTENT DEVELOPMENT APPROVED AS A 121A PROJECT; The Development has also been the subject of an approval by the BRA as a project approved under Chapter 121A of the General Laws of the Commonwealth of Massachusetts and Chapter 652 of the Acts of 1960, each as amended ("Chapter 121A").]** The Development will be operated by Caesars Massachusetts Management Company, LLC, or its affiliates, who will manage and/or operate the Development ("Operator").

Pursuant to the Host Community Agreement dated as of _____, 2013 by and between the City of Boston, a municipal corporation, and the Developer (the "HCA"), the Developer has agreed to formulate and submit to JCS a voluntary employment opportunity plan, the purpose of which is to detail the Developer's good faith efforts on its own behalf and its good faith efforts to encourage Operator to fill with, or make available to, Boston residents with certain employment opportunities created in four thousand (4,000) permanent jobs to be created at the Development. Working in cooperation with JCS and the Boston Employment Commission ("BEC"), the Developer, by agreeing to the provisions set forth herein and by signing this Agreement, has formulated such a plan, and has agreed to encourage Operator and other occupants of the Project to pursue the plan at the Development.

The Employment Opportunity Plan (the "Plan") set forth in this Agreement focuses upon steps which the Developer can take on its own behalf and its good faith efforts to encourage Operator to hire Boston residents for new job openings. The following paragraphs set forth the Plan:

I. Undertakings by Developer

A. With respect to all jobs created at the Development, the Developer will encourage Operator, other occupants of the Development, and the successor or assign of such Development, to notify at least one of Boston's One-Stop Career Centers when such Development is being filled with jobs prior to announcing or advertising the availability of any employment position.

B. With respect to all jobs created at the Development, the Developer will, or will encourage Operator, other occupants of the Development and successor or assign of Operator or any such other occupants of the Development, to utilize at least one of Boston's One-Stop Career Center as one of its recruiting methods for available employment opportunities.

C. The Developer shall provide to Operator, and any other occupants of the Development, the information regarding resources available through one of Boston's One-Stop Career Center, the City of Boston Neighborhood Jobs Trust and JCS, which information is attached to this Agreement as **Exhibit A**.

D. The Developer shall impose a local hiring program for permanent jobs at the Development that will include the following components:

1. Host and maintain a central job bank website (in English and Spanish) as a micro-site within the larger Development website.

2. The Developer will provide City residents with advance notice of hiring activities by publishing announcements in local newspapers approximately four (4) to eight (8) consecutive weeks prior to initial hirings.

3. Residents of Boston (together with residents of host and surrounding communities (as defined in the Act)) will be given first priority to apply for jobs during a specified "advance period," such advance period to be established jointly by the Developer and the Gaming Accountability Office of the City of Boston.

4. Written flyers in English and Spanish will be distributed to local community-based organizations in East Boston to inform people about local advance period hiring and the Developer shall use best efforts to otherwise notify residents in the low income neighborhoods in East Boston proximate to the Development of potential job opportunities.

E. The Developer will donate a minimum of twenty-five (25) computers to be placed in strategic areas in East Boston neighborhoods (e.g. local libraries or community centers) as well as install and maintain a minimum of two (2) computers on-site to ensure that residents without computers can research and apply online for jobs at the Development.

F. During the Term of this Agreement, the Developer will hold job fairs at the Development to make City residents aware of job opportunities available at the Development.

G. The Developer will utilize best efforts to use the existing labor force in the Commonwealth, and in particular the existing labor force in the City, when hiring for new jobs, as required by M.G.L. c. 23K, Section 18(17).

H. The Developer will make best efforts to ensure that fifty percent (50%) of permanent employees at the Development are City residents, of which a substantial percentage should be from the East Boston community, all as more particularly set forth in the HCA.

I. In furtherance of specific goals for the utilization of minorities, women and veterans permanent jobs, the Developer shall send to each labor union or representative of workers with which the Developer has a collective bargaining agreement or other contract or understanding, a notice advising the labor union or workers' representative of the Developer commitments.

J. During the term of this Agreement, the Developer shall use best efforts to work with the City's Public Schools Department to establish school-to-work programs for hospitality jobs at the City's vocational or public high schools.

K. During the term of this Agreement, the Developer shall support the efforts of, and actively engage with, the Commission and community colleges to develop the Massachusetts Community College Workforce Training Institute and Massachusetts Casino Careers Training Institute at community colleges in the Commonwealth.

L. During the term of this Agreement, upon request by the Gaming Accountability Office, the Developer shall provide the Gaming Accountability Office with information regarding its contracts with organized labor, including hospitality services, the number of employees employed at the gaming establishment, including detailed information on the pay rate and benefits for employees and contractors, and the Developer's plans to ensure labor harmony during all phases of the construction, reconstruction, renovation, development and operation of the gaming establishment.

M. After the Early Opening Operations Commencement Date (as defined in the HCA) through the remainder of the term of this Agreement, the Developer shall establish a program or partnership to provide off-site child day-care in accordance with Section 18(9) of the Act.

N. The Developer shall implement a training and development program for permanent jobs at the Project that will include the following components:

1. Provide opportunities for team members to pursue personal and professional growth, to enjoy satisfying careers, to participate in training and development programs and to celebrate success including rewards and recognition for superior performance against measurable goals.

2. Provide new employees with learning programs such as the "Empire Series." The Empire Series is Operator's best-in-class and award winning learning program for all new employees. This program offers a lively and engaging environment that uses cutting-edge technology. In addition to such learning program, the Developer shall provide specialized training courses customized to meet employee learning needs.

3. If a position requires serving alcoholic beverages, authorizing complimentary alcoholic beverages, or managing a food and beverage operation, that employee must obtain an alcohol awareness certification card. All table games employees, valet attendants, limo drivers and security team members must also possess this certification.

4. Provide an educational assistance program that reimburses employees ninety percent (90%) of tuition costs up to a maximum of $3,000 per year for pre-approved undergraduate classes or up to a maximum of $4,000 per year for pre-approved graduate study at an accredited college or university.

5. Provide regulatory and compliance training such as Skillsoft, which is Operator's online learning platform used to deliver all regulatory and compliance training in addition to numerous professional development courses.

6. Implement the Caesars Code of Commitment, which includes a commitment to all employees to treat them with respect and provide satisfying career opportunities to invest in employees by providing excellent pay and valuable benefits, including health insurance and a retirement plan, and to share financial success through bonuses for frontline employees, to encourage professional and personal growth through tuition reimbursement, on-the-job training, career development, and promotion from within, to

actively seek and respond to employee opinions on all aspects of their jobs, from the quality of their supervisors to the quality of the casinos, and to value employees from every possible background, and who approach issues and problems from different perspectives.

O. Consistent with the corporate policy of the Developer to provide equal opportunity for all applicants and employees, the Developer will not discriminate on the basis of race, color, religion, sex, national origin, age, disability, sexual orientation, gender identity or expression, or veteran status. This policy applies to all areas of employment including recruitment, hiring, training, promotion, compensation, benefits, transfers and social and recreational programs. The Developer will provide Developer's workforce development plan, which pursuant to M.G.L. c. 23K, Section 18, will provide equal employment opportunities to all employees, including persons with disabilities.

P. In addition, as in part as it is fulfillment of a condition of the HCA, **[to the extent that 121A approvals are obtained] in consideration of its obtaining stabilization of existing tax payments through the execution of a contract pursuant to Section 6A of Chapter 121A which benefits both Operator and the Developer,** and being a party of the Development Agreements noted above, the Developer or Operator, as the case may be, will meet with the Director of JCS, or her designee, to review resources and information regarding the Plan; such meeting shall be scheduled any time after the execution of this Plan and in any event, prior to the issuance of any certificate of occupancy for the Development.

II. Continuing Joint Efforts

Recognizing that this Plan is entered into voluntarily by the Developer and JCS, as a commitment to the economic health of the City and its residents, in particular the residents of East Boston, the execution of this Agreement subscribing to the foregoing Plan by the Developer is hereby recognized by the JCS to satisfy each and every obligation of the Developer under the HCA, the Development Agreements, **[the 121A approvals],** and under Article 80 to formulate such a Plan. The foregoing Plan is hereby approved by JCS. The Developer hereby agrees to fulfill all of the undertakings and responsibilities imposed upon a Developer by the Plan from the date hereof and including _____, _____ **[a date which is fifteen (15) years after the effective date]**. This Agreement shall be binding upon, and inure to the benefit of, the successor owner of the Development.

EXECUTED the date first above written.

DRAFT Construction Management Plan

This draft Construction Management Plan (CMP) addresses construction sequencing, staging plans, material deliveries, and specific mitigation measures intended to avoid and minimize impacts from the Project. As Project design progresses, protection measures will be added and modified as appropriate. A CMP will be submitted to the Boston Transportation Department for approval prior to commencement of construction, and the Developer's general contractor will be bound by the operational parameters described herein.

For on-site construction, the Developer and construction team will coordinate CMPs with the cities of Boston and Revere and applicable state agencies and authorities, as appropriate.

1. Construction Methodology

This section describes the construction schedule and the methods that will be used for staging, site access, public safety, and erosion and sediment control.

1.1 Construction Activity Schedule

Project construction is expected to take up to 60 months. Weekend, extended hours and $2^{nd}/3^{rd}$ shift activities will require an off-hours permit jointly issued by the Inspectional Services Department and Boston Transportation Department (BTD), and will be performed in a manner that will minimize impacts as may be necessary to meet permitting restrictions. The general contractor will also need to perform some activities, such as materials unloading, during off hours; deliveries of large construction equipment (e.g., cranes, excavation equipment) will be scheduled to avoid and/or minimize impacts to vehicular, pedestrian traffic and noise generated from the site.

Within the site, activities such as excavation, pile driving, and steel erection will also be prohibited during these hours. Every two weeks, the contractor will publish an updated schedule of upcoming work and will disseminate the schedule to affected parties in local neighborhoods. In addition, the general contractor will publish monthly schedule updates describing progress as well as projected activity for the next month. This information will be available on a Project website which will allow neighbors real-time access to the most up-to-date construction information.

1.2 Construction Staging and Truck Deliveries

The proposed staging plan is designed to isolate construction activities while providing safe access for pedestrians and automobiles during normal daily activities as well as emergencies. All adjacent streets will remain open to the public during construction.

Construction storage and staging will remain within the fenced construction fence enclosure. This boundary will be enclosed with a six-foot-high chain link fence with privacy screening. Plans illustrating construction phasing and staging on the Project site will be provided to and subject to review and approval by BTD prior to the commencement of any Work on the Property.

All construction delivery trucks will enter the site from Route 1A at Tomasello Drive, and will not be allowed to park or idle on neighborhood streets. Major deliveries such as steel or large pieces of mechanical equipment will be staged on-site. Specific language regarding staging locations and the prohibition of staging materials in neighborhood streets will be called out in all subcontracts. While it is not anticipated that any off-site staging or marshalling areas will be used, the locations of any and all staging and marshalling areas will be forwarded to the BTD and the City of Revere for review and approval. Truck wheel wash stations will be located and used at all site exits to ensure that soil materials are not tracked onto roadways from the site. During all site work activities, construction laborers will maintain adjacent streets and sidewalks to prevent accumulation of dirt and dust. Mechanical sweeping, and at the City's sole discretion, vacuum sweeping, will be used continuously during the excavation, foundation, and site work phases of the project to maintain adjacent roadways.

1.3 Perimeter Protection and Public Safety

Proper signage will direct pedestrians, vehicles and bicyclists safely around the site and construction activities.

The general contractor will work to minimize impacts to both pedestrian, bicycle and vehicular flow. Specific configurations of staging and pedestrian access around the site will vary depending on the phase of work being performed (see attached construction phasing plans). These configurations will ensure safe egress to and from the existing racetrack facilities during operation. As pedestrian, bicycle and vehicular access changes with the progression of construction, all changes will be submitted to BTD and the City of Revere for their review and approval prior to implementation. Fire department access as well as access to the fire hose connection will be continuously maintained at all times as shown in the attached construction phasing plans.

In general, secured fencing will isolate construction areas from pedestrian traffic within the site. Police details will be provided as needed to facilitate traffic flow both on and off the project site. In addition, sidewalk areas and walkways near construction activities will be protected, well marked, and lighted to ensure pedestrian safety. The general contractor will provide sufficient temporary site lighting to ensure the safety of all pedestrians accessing the site until permanent street lighting is installed. Construction safety procedures will be designed to meet all OSHA safety standards for specific site construction activities.

All subcontractors will be required to wear appropriate personal protective equipment, and each subcontractor will implement and manage its own Safety and Health Program for the project. These programs will be reviewed by the general contractor's field staff and safety department, which will also monitor compliance. This program will ensure that subcontractors' employees, subcontractors, and suppliers, regardless of tier, know and understand the complete safety and health requirements of the project.

Snow removal and ice treatment will occur in a timely manner and will be provided on the surrounding City sidewalks. Trash removal and debris cleanup will be performed on a continuous basis throughout the entire construction process. Construction-period way finding and directional signage will be provided and updated as necessary during construction.

1.4 Erosion Control, Dewatering and Mitigation

The Developer will prepare a Stormwater Pollution Prevention Plan (SWPPP) and submit a Notice of Intent to the U.S. EPA for coverage under EPA's NPDES Construction General Permit (CGP). The SWPPP will detail methods for preventing soil erosion and pollution of downstream receiving waters due to stormwater runoff from construction zones, and will be a "living" document to be revised as construction phasing dictates. The SWPPP will include both structural and non-structural BMPs to be used during construction, and will require site inspections in accordance with the CGP during all periods when ground surfaces remain un-stabilized. Locations for materials stockpiles, construction staging, construction trailers, and equipment storage will be identified.

Construction-period erosion and sediment controls will include the non-structural and structural BMPs described below. These controls will be designed, installed, and maintained in accordance with the SWPPP as well as the following documents:

> "Storm Water Management for Construction Activities, Developing Pollution Prevention Plans and Best Management Practices" (EPA 832-R92-005, Sept. 1992);

"Storm Water Management for Construction Activities, Developing Pollution Prevention Plans and Best Management Practices – Summary Guidance" (EPA 833-R92-001, Oct. 1992);

Massachusetts Stormwater Management Policy Handbook (Volume I) and Technical Handbook (Volume II) issued by the Massachusetts Department of Environmental Protection, March 1997; and

Massachusetts Erosion and Sediment Control Guidelines for Urban and Suburban Areas, A Guide for Planners, Designers and Municipal Officials, March 1997.

Stormwater management for the post-construction, operational phase of the Resort is described in Section 9.3.2.

Non-Structural Controls

One of the most important methods of preventing soil erosion and sedimentation associated with stormwater runoff is to minimize the amount and duration of non-stabilized surfaces. Maintaining an efficient construction sequence that minimizes the size of disturbed areas reduces the exposure of non-stabilized surfaces to the erosive effects of stormwater. As with the SWPPP, the CMP will require contractors to minimize areas of disturbance. The thoughtful siting of storage and stockpile areas away from downstream receptors will also help prevent sedimentation from stormwater runoff.

On-site storage of hazardous materials or toxic chemicals will be limited to what is absolutely necessary. Where necessary, these materials will be stored off the ground and in enclosed or covered structures to prevent contact with stormwater runoff.

Daily street sweeping (or more frequent street sweeping as needed) of construction areas and surrounding streets and sidewalks will be required throughout construction to control fugitive dust emissions and to remove sediments tracked off site where they could otherwise by washed into surface waters, wetland resource areas, or the municipal stormwater management system, on a schedule approved by BTD. Permanent stabilization of exposed surfaces will be required within seven days of the completion of work in any given area. In instances when it may not possible to permanently stabilize exposed soils within seven days of work completion, or when soils will be exposed for 14 days or longer without work occurring, temporary stabilization of surfaces will be required. This temporary stabilization will be achieved by seeding with quickly-germinating grasses or the use of erosion control blankets.

Structural Practices

In addition to the non-structural controls discussed above, many construction-period structural BMPs will be required to prevent pollution from stormwater runoff.

Appropriate perimeter controls such as silt socks, straw wattles, and compost berms will be installed to filter and slow stormwater runoff as it leaves the construction site. To prevent the import of invasive species and weed seeds, hay bales will not be used for erosion and sedimentation control in the Project. In accordance with the SWPPP, these perimeter controls will be inspected every seven days. Sediment build-up behind perimeter controls will be removed when it reaches one-half the height of the controls, and controls will be repaired or replaced as needed.

To prevent the tracking of sediments beyond the construction site, stabilized construction exits of crushed stone will be installed. All construction traffic will be directed over these exits when leaving the site to remove soils from vehicle tires. Construction exits will be inspected weekly in accordance with the SWPPP, and will be repaired or replaced as necessary when sediment builds up on the surface or crushed stone is displaced. Appropriately-sized concrete truck wash-out basins will be installed in locations to prevent contact with stormwater runoff. These basins will be cleaned as needed, and concrete materials will be disposed of in accordance with applicable local, state, and federal regulations.

New and existing inlets to stormwater management systems will be protected against sediment inflow. Catch basins will be fitted with filter inserts or will be surrounding by silt socks or other materials to filter incoming stormwater. The stormwater management systems will be constructed starting at the downstream end, and no flows will be directed to permanent stormwater BMPs prior to their completion and upstream surface stabilization.

Where larger site disturbances are necessary to accommodate particular construction activities, various measures will be implemented to prevent sediment-laden runoff from leaving the Project site. Where long, exposed slopes are required, temporary check dams will be constructed to reduce runoff velocities and promote less erosive sheet flow. These check dams may be earthen berms, straw wattles, compost berms, or other appropriate systems of slowing runoff velocities and promoting sediment removal. Temporary sediment basins will be constructed where necessary to allow sediments to drop out of suspension prior to discharge and promote construction-period infiltration to groundwater. Disturbed surfaces will be temporarily graded towards these basins, or temporary diversion swales will be built to direct flows to these basins. Basin outlets will be constructed to promote low-velocity sheet flow and will be directed towards existing vegetated areas for further treatment.

2. Construction Air Quality

Construction operations at the site, including earthwork, will generate dust. All demolition and construction work will be performed in accordance with applicable sections of the MassDEP Air Pollution Control Regulations at 310 CMR 7.02 and 310 CMR 7.09. Specific air quality mitigation measures will be as follows:

Use of appropriately designed construction entrances and wheel wash facilities at all construction exists by all vehicles that would otherwise track mud or dirt onto public roadways to prevent off-site migration of soils;

Mechanical street sweeping, and at the City's sole discretion, vacuum sweeping, of construction areas and surrounding streets and sidewalks;

Encapsulation of demolition sites as necessary where hazardous materials such as asbestos or lead paint are identified;

Removal of demolition and construction waste in covered or enclosed trailers;

Wetting of exposed soils and stockpiles to prevent dust generation;

Minimizing stockpiling of materials on site;

Turning off construction equipment when not in use, complying with all idling limitations in applicable law and regulations and minimizing idling times;

Minimizing the storage of demolition and construction wastes on site; and

Minimizing the duration that soils are left exposed.

Many of these measures are intended to minimize potential impacts associated with construction activities that may generate fugitive dust, which will result in localized increases in airborne particulate levels. Fugitive dust emissions from construction activities will depend on such factors as the properties of the emitting surfaces (e.g., moisture content and volume of spoils), meteorological variables, and construction practices employed.

Although fugitive dust may be generated during demolition and construction activities, the distance to off-site receptors makes it unlikely that the migration of dust will cause off-site impacts. Nonetheless, the contractor will implement dust control measures during active demolition and construction that will primarily consist of using wetting agents regularly to control and suppress dust that may come from the structure being demolished or the construction materials. The contractor will comply with the National Emission Standards for Hazardous Pollutants (NESHAP) throughout renovation,

demolition, and construction activities. The proposed redevelopment also includes on-site processing and reuse of brick and concrete, which will involve use of an on-site crusher. Appropriate notifications 30 days prior to any crushing will be performed, including notifying local officials and MassDEP in accordance with 310 CMR 16.05(3)(e)6. At no time shall fugitive dust be allowed to migrate beyond the immediate work zone. Dust mitigation during processing will include the use of water sprayers.

Site preparations involving construction haul roads, soil stockpiles, and vehicles exiting the Project site have the greatest potential to create fugitive dust. Soil excavation does not typically generate dust, however, due to the natural moisture content of subsurface soils. As necessary, haul roads will be routinely misted to suppress dust generation. Soil stockpiles can either be covered or vegetated, depending on how long the stockpile will remain. Dust from construction traffic exiting the Project site onto public roads will be controlled with the use of wheel wash stations and vehicle tracking pads, which remove soil from the tires of construction vehicles. Paved construction entrances will also be routinely swept by street sweepers to remove accumulated soils. At no time will visible soils be permitted on public streets that could result in fugitive dust issues.

In addition, the Developer acknowledges the importance of emission controls and will require contractors to comply with MassDEP's Diesel Retrofit Program and the use of ultra low sulfur diesel in off-road engines. The Diesel Retrofit Program, formerly called the Clear Air Construction Initiative of the Clean Construction Equipment Initiative, originated as an air quality mitigation measure for the Central Artery/Tunnel Project. The program was designed to encourage users of diesel construction equipment to install exhaust emission controls such as oxidation catalysts or particulate filters on their diesel engines.

Construction vehicles will be required to comply with all applicable laws and regulations regarding engine idling, and shall minimize any such idling. The approved construction contractor(s) will be required to use equipment fitted with diesel oxidation catalysts (DOC) or diesel particulate filters (DPF) to reduce emissions. DOCs can reduce fine PM by 25 percent, toxic carbon monoxide by 60 percent and smog-forming volatile organic compounds by 60 percent. DPFs can reduce fine PM by 85 percent or more, as well as smaller reductions in carbon monoxide and VOCs.

A construction air quality dust and emissions mitigation plan will be developed before construction begins and enforceable measures will be executed in the construction contracts.

Indoor air quality will be evaluated and tested by the Project environmental consultant, as appropriate, in buildings that are to remain or be renovated. The need for protective measures such as vapor barriers will be determined during final design. The potential for

methane migration (from organic deposits) will be assessed by the Project environmental consultant during final design.

3. Construction Period Noise

Predicted sound levels from construction within the proposed Project site are not anticipated to cause a significant noise impact and are expected to meet the relevant City of Boston daytime construction noise criteria at all noise-sensitive locations.

Construction will require the use of equipment that will be heard off-site, but background ambient noise conditions in the area, including urban activities and traffic, will lessen the impacts from construction noise. In addition, the Developer is committed to mitigate noise impacts related to the construction activities. A noise analysis performed for the Project to quantify the expected noise level associated with different construction activities and has been provided to BTD and the City of Revere.

The proposed construction process has been designed around site constraints, and the exact pieces of equipment will be finalized after subcontractor selection is complete.

Every reasonable effort will be made to minimize the noise impact of construction activities. Mitigation measures will be as follows:

Scheduling work during daytime hours. If extended hours, weekend or $2^{nd}/3^{rd}$ shift work is proposed, it will be coordinated with BTD and the City of Revere. During any such extended hours, weekend or $2^{nd}/3^{rd}$ shift work, all back up alarms on vehicles shall be disengaged and manual traffic controls will be used.

Using appropriate mufflers on all equipment and providing ongoing maintenance of intake and exhaust mufflers.

Maintaining muffler enclosures on continuously operating equipment, such as air compressors and welding generators.

Replacing specific construction operations by less noisy ones where feasible and practical.

Selecting the quietest practicable equipment (e.g., electric instead of diesel-powered equipment).

Selecting equipment operations to keep average noise levels low, to synchronize the noisiest activities with times of highest ambient noise levels, and to maintain relatively uniform noise levels.

Turning off idle equipment.

Securing any decking on roadways so that there is no rattling when traffic passes over.

Using vehicles and equipment with either ambient-sensitive or manually adjustable back-up alarms.

The proper sizing of impact equipment such as hoe rams, pile drivers and jackhammers and powering only to the degree needed to perform the work.

The installation of noise suppression enclosures on hoe rams.

The placement of stationary noise producing equipment such as pumps and generators as far away as possible from residential and sensitive receptor locations.

Keeping engine housing panels on all equipment closed; and when not in use, shutting off equipment.

4. Construction Schedule

The Project will be constructed in one continuous phase. Staging plans will be provided to BTD for review and approval prior to the commencement of any Work on the Property. The precise details of such staging will be set forth in the final CMP as approved for the Project but in all events shall require that all construction staging will be sequenced such that all construction staging and construction worker parking will be provided on the Property.

5. Construction Traffic Impacts

The number of workers required during construction will vary by period of construction and level of activity. Because the workforce will arrive prior to peak traffic periods, these trips are not expected to impact traffic conditions. In addition, the general contractor will encourage jobsite personnel to utilize public transportation such as by providing personnel with subsidized MBTA passes or shuttle services. Personal vehicles will be allowed to park within designated areas at the Project construction site at no cost, and no construction or personal vehicle parking will be allowed in adjacent neighborhoods. The general contractor shall develop a parking plan for BTD's review and approval, which shall include the general contractor's plans and protocols for enforcing the prohibition on construction personnel parking personal vehicles on streets in the adjacent neighborhood. Terms and conditions to maximize protection of the neighborhoods related to workforce parking will be written into each subcontract and reviewed with each worker during a mandatory orientation. Terms and conditions encouraging public transportation use will be included in each subcontract.

Truck traffic will vary throughout the construction period, depending on the activities being performed. It is expected that truck traffic will average 15-20 trucks daily spread evenly throughout the day.

Specific truck routes will be identified and described to BTD and the City of Revere, and will be clearly delineated on site logistics drawings, for BTD and the City of Revere's review and approval. Construction contracts will include clauses restricting truck travel to BTD- and Revere-approved routes. Unless a specific exception is approved by BTD and the City of Revere, the Developer shall require all construction vehicles to access the Project site from Route 1A at Tomasello Drive. Wheel wash stations and anti-tracking stone pads, which will be at least 50 feet long and consist of a four-inch-thick layer of crushed stone placed over a non-woven filter fabric, will be placed at each access point to the work area. Wheel wash stations will remain in place until the completion of construction and anti-tracking stone pads will remain in place until the work area is paved or otherwise stabilized.

Off-site traffic improvements will require close coordination with the cities of Boston and Revere as well as certain state agencies. The general contractor will develop a construction-period traffic management plan for review and approval by the cities and state. Signage, traffic cones, drums, and other traffic control measures will be employed during construction to provide positive guidance for traffic near the work zone.

6. Dewatering and Groundwater

Should dewatering become necessary during demolition, installation of utilities, or construction of building foundations, appropriate BMPs will be implemented to prevent pollution of downstream receptors. Temporary construction dewatering will likely be required locally for various excavations, and intermittent pumping will be used as needed to allow for construction in-the-dry. Effluent generated during temporary construction dewatering will be infiltrated into the ground where possible. Groundwater testing will be conducted during dewatering operations as appropriate to determine the type and degree of contamination present and to evaluate and implement appropriate measures to manage groundwater associated with Project excavation and construction, including use of a fractionation tank(s) and adherence to the requirements of temporary construction dewatering permits, as appropriate.

7. Material Handling

The Project includes the demolition of existing buildings, paved driveways, parking lots, sidewalks, and various utilities that will generate large volumes of waste products. Based on available information, a portion of the demolition waste includes hazardous materials such as asbestos, minor amounts of materials containing low levels of polychlorinated biphenyls (PCBs), and lead paint. In addition, due to the scale of the Project, a large

amount of general construction waste is also expected. The sections below detail how hazardous and non-hazardous solid wastes will be handled during demolition and construction. The Developer is targeting a 75% reduction in construction debris.

7.1 Solid Waste and Recycling

Proposed construction, demolition, and remediation activities will generate solid waste, including certain regulated building waste streams (e.g., asbestos-containing materials, PCBs, and oil/hazardous materials). The general contractor will take an active role in the processing and recycling of construction waste. The disposal contract will include specific requirements to ensure that procedures allow for the necessary segregation, reprocessing, reuse, and recycling of materials. For those materials that cannot be recycled, solid waste will be transported in covered trucks to an approved solid waste facility per MassDEP Regulations for Solid Waste Facilities, 310 CMR 16.00. Brick, concrete, gypsum wallboard, wood and metal will be segregated from other construction debris for recycling, with the other debris to be disposed of as non-banned construction waste in accordance with waste facility management regulations at 310 CMR 19.017.

Demolition of the administration building, electrical building, and portions of the existing grandstand and link buildings will generate asphalt, brick and concrete (ABC) debris. ABC that is not coated, impregnated, or otherwise treated will be crushed and reused on site without MassDEP pre-approval, provided that MassDEP and the municipalities are notified in advance. However, for ABC that is painted, coated, impregnated, or otherwise treated, the contractor will submit a Beneficial Use Determination (BUD) Application to MassDEP for approval before those materials are crushed and reused on site. The application will be supported by documentation demonstrating that the material will be beneficially used on site and that use of the material will not result in a significant risk to health or the environment and will not increase the overall level of contamination at the site.

7.2 Hazardous Waste

Releases of oil or hazardous material to the environment are managed under the MCP (M.G.L. Chapter 21E and 310 CMR 40.0000) under the supervision of an LSP. The Project includes demolition and reconstruction as part of site redevelopment. [*Customary background information regarding Project environmental matters to be addressed in final CMP*].

An LSP has been engaged by Developer to provide environmental consulting services during Project design and construction. If contamination is identified in pre-construction sampling or during construction, an LSP will provide services consistent with the MCP as required for regulatory compliance and close-out. The Project environmental consultant will ensure that the Project conforms to MCP regulatory requirements for construction of

buildings in contaminated areas, and that all required submittals will be provided to MassDEP.

The presence of PCBs in the caulking of buildings constructed between 1950 and 1980 has recently become public knowledge. There are minor amounts of PCB-containing materials on the Project site, specifically the caulking used to seal some of the windows. PCB-containing material is also common in items such as florescent light fixtures. A building assessment of the existing buildings has been completed quantifying the demolition debris that requires special disposal conditions. Non-hazardous waste landfills in Massachusetts landfills are permitted to accept PCB-containing materials where concentrations are less than 2 mg/kg; such disposal does not require approval from the EPA.

The site is also regulated under asbestos abatement regulations (310 CMR 4.00), and asbestos-containing materials are known to exist on the Project site. Asbestos is classified as a "special waste" under MassDEP solid waste regulations, and asbestos and asbestos-containing material require special handling and transporting methods set out in MassDEP regulations. Asbestos-containing material surveys and abatement plans will be developed for each building prior to demolition. Asbestos can only be disposed of in landfills that have been approved to accept asbestos-containing waste materials. Any entity or individual engaged at the site for asbestos abatement or containment shall be licensed and certified under 453 CMR 6.00.

The Project involves the demolition of existing buildings, paved driveways, parking lots, sidewalks, and various utilities including portions of existing water mains and sewer mains. Based on available information, a portion of the demolition waste will include hazardous materials such as asbestos and lead-based paint. These materials are classified as "special waste" under MassDEP solid waste regulations. Accordingly, asbestos, asbestos-containing material, and materials with lead-based paint will be segregated and Project operations will proceed in accordance with the required special handling and transporting methods set out in MassDEP regulations.

Based on a February 14, 2007 Phase I/Phase II Environmental Site Assessment report completed by GEI Consultants, an on-site inspection for asbestos-containing building materials and lead-based paint was conducted by Smith & Wessel of Merrimac, Massachusetts in select buildings on the Project site. Materials that tested positive for asbestos included floor tile and paper, wall and ceiling panels, insulation, window glazing compound, and door caulking. It is unclear whether the existing grandstand roof contains asbestos. It is also noted that some painted surfaces contain lead-based paint.

Surveys and abatement plans related to asbestos-containing material, PCB-containing material, and lead-based paint will be required for each building prior to demolition.

Asbestos, PCBs, and lead-based paint will be disposed of in accordance with MassDEP regulations at landfills that have been approved to accept these materials. Any entity or individual engaged at the site for asbestos, lead-based paint, or PCB abatement or containment shall be licensed and certified under 453 CMR 6.00.

Construction operations at the site, including earthwork, will generate dust. As required on construction projects, the Contract Documents will specify the requirements for dust control and include the site-specific Contractor Health & Safety Plans to protect worker safety. If required, dust will be suppressed by spraying the site with water, and air quality will be measured with dust monitors.

Based on existing information, one active UST exists on site. The existing UST is a 7,000-gallon partitioned gasoline and fuel oil tank located near the northwest corner of the existing building. During construction, the existing UST will be removed and a new UST will be installed near the proposed new maintenance building. The Project LSP will ensure that tank removal and closeout is completed in accordance with the MCP and requirements for the city of Revere. In addition, previously unknown USTs encountered during construction will be managed similarly, as needed.

8. Draft Spill Response Plan

Small quantities of hazardous materials or chemicals may be utilized on site, including petroleum/fuel products. Any such materials will be handled and stored in accordance with all applicable regulatory requirements. In the event of an unplanned release of petroleum/fuel products or other contaminants, the general contractor and its subcontractors will utilize the following procedures:

1. Notify Fire Department and contracted spill response contractor;
2. Notify the U.S. Army Corps of Engineers;
3. Mobile excavating equipment will come to the spill/release area and if necessary, create berms, dig channels or cover effected area with soil to reduce spreading or migration;
4. The general contractor will maintain a spill kit on site containing absorbent materials that will be positioned near fueling areas and utilized in the event of spill or release;
5. The general contractor and its subcontractors will reduce the probability of an unplanned spill or release by having fuels delivered by truck to a designated fueling area rather than bulk storage and/or tanks of petroleum/fuel products or other contaminants;

6. Fire extinguishers will be positioned adjacent to fueling areas;

7. No hot work, smoking or potential ignition sources will be allowed in the fueling areas;

8. Personnel involved with fueling or handling of any contaminant will be equipped with communication devices to sound an alarm in the event of spill or unplanned release;

9. Only authorized personnel will be allowed in the spill release area; and

10. The general contractor and its subcontractors will provide assistance as necessary to the qualified spill response contractor and fire department.

9. Geotechnical Impacts and Monitoring

Excavation will be required for the deep foundations (precast piles and/or steel piles), drilled elements such as micropiles, and PIFs proposed in the Project design. Means and methods for installing the deep foundation system will consider potential impacts to abutting facilities that will remain within the property limits (e.g., the grandstand). It is not expected that vibrations will approach thresholds that could potentially impact existing facilities; nonetheless, vibration monitoring will be conducted during pile driving activities. In addition, the Project team will conduct a full existing conditions survey of existing structures prior to commencement of construction, with follow-up on completion.

10. Rodent Control

To control rodent infestation, the City enforces requirements established under the Massachusetts State Sanitary Code, Chapter 11, 105 CMR 410.550 and the State Building Code, Section 108.6. Policy Number 87-4 (City of Boston), which require the extermination of rodents for issuance of permits for demolition, excavation, foundation and basement rehabilitation.

A rodent control program will be developed for the Project prior to commencement of construction and submitted to the City for its review and approval. The program will include performing extermination and control procedures on a bi-weekly basis and placing tamper-resistant bait boxes around the site perimeter.

11. Utilities

New infrastructure for sewer, drainage, domestic water, fire protection water, telephone, gas, and electric services will be tied into existing infrastructure. Specific traffic management plans will be developed for the work required to perform these tie-ins. Connections to the existing services will be coordinated with the proper utilities and their

respective contractors, as necessary. All shutdowns will be arranged with affected parties and proper notice will be given prior to any shutdowns. Any and all work requiring a BTD Permit will be approved in writing by the general contractor at the time of permit application. The written approval of the general contractor will be presented to BTD by the contractor performing the work at the time of application of permit to BTD.

12. Damage to Public Property

The Contractor will be responsible for repairing any damage to public streets, public sidewalks, or other public property resulting from its construction activities.

13. Emergency Contacts

A 24-hour emergency contact list will be distributed to all parties involved in the Project. This list shall contain at least three (3) representatives for the Contractor. A 24-hour complaint hotline telephone number shall be provided and will be visibly posted on Project site signage subject to the approval of BTD, including on a Project sign visible from Route 1A. This hotline shall be staffed appropriately to ensure that a caller is allowed to speak to a person as opposed to leaving a message. Logs of all complaints and how/when the complaints were resolved will be kept on-site.

EXHIBIT K-1

Calculation of Annual Host Community Agreement Fee

The Developer shall pay a Base Annual Host Community Agreement Fee for each calendar year as set forth in Table 1—Base Annual Host Community Agreement Fee below:

TABLE 1
Base Annual Host Community Agreement Fee

Period	**Base Annual Host Community Agreement Fee**	**Amount to Be Transferred therefrom to Community Impact Trust Each Year**
Construction Commencement Date until Early Opening Operations Commencement Date	Real estate taxes applicable to existing improvements and land at their current assessed value, plus taxes assessed on the value of improvements under construction (taxed consistent with ordinary taxation of commercial construction without a gaming use premium), but not less than $1,500,000 annually	$0.00. ** *Note: The Developer will be paying an Upfront Community Impact Fees in the amount of $33,400,000.00 as set forth in Section IV.B.*
Early Opening Operations Commencement Date until Full Build-Out Operations Commencement Date (FBOOCD)	$20,000,000 annually	$12,000,000 annually
First Year following FBOOCD	$24,000,000 annually	$16,000,000 annually
Second Year following FBOOCD	$28,000,000 annually	$20,000,000 annually
Third Year following	$32,000,000 annually	$20,000,000 annually

FBOOCD and each Year thereafter		

The Base Annual Host Community Agreement Fee shall be equitably pro-rated for any partial years falling between the periods set forth above.

In addition to payment of the Base Annual Host Community Agreement Fee, commencing on the Full Build-Out Operations Commencement Date, in the event the Gross Gaming Revenues from the facility are greater than $800,000,000 during any Casino Year, the Developer shall also pay an Additional Annual Host Community Agreement Fee in addition to the Base Annual Host Community Agreement Fee in an amount equal to the total Gross Gaming Revenue multiplied by the corresponding percentage set forth in Table 2 – GGR Percentage Table below:

TABLE 2
GGR Percentage Table

Gross Gaming Revenue *	**Percentage**
$810,000,000 - $819,999,999	0.1%
$820,000,000 - $829,999,999	0.2%
$830,000,000 - $839,999,999	0.3%
$840,000,000 - $849,999,999	0.4%
$850,000,000 - $859,999,999	0.5%
$860,000,000 - $869,999,999	0.6%
$870,000,000 - $879,999,999	0.7%
$880,000,000 - $889,999,999	0.8%
$890,000,000 - $899,999,999	0.9%
$900,000,000 - $909,999,999	1.0%
$910,000,000 - $919,999,999	1.1%
$920,000,000 - $929,999,999	1.2%
$930,000,000 - $939,999,999	1.3%
$940,000,000 - $949,999,999	1.4%
$950,000,000 - $959,999,999	1.5%

$1,210,000,000 - $1,219,999,999	4.1%
$1,220,000,000 - $1,229,999,999	4.2%
$1,230,000,000 - $1,239,999,999	4.3%
$1,240,000,000	4.4%

* In the event the Gross Gaming Revenues are between $800,000,001 and $809,999,999, no Additional Annual Host Community Agreement Fee shall be due.

In the event the Gross Gaming Revenues exceed $1,240,000,000 in any Casino Year, the Developer shall pay an Annual Host Community Agreement Fee (meaning the Base Annual Host Community Fee plus the Additional Annual Host Community Fee) equal to 7% of the total Gross Gaming Revenues in accordance with the provisions of Section IV.D. of this Agreement.

EXHIBIT K-2

Procedures for the determination of monthly payment of Annual Host Community Agreement Fees:

For all monthly payments other than the monthly payment for December of each Casino Year:

1) At the end of each month during a Casino Year (the month in question being referred to as a "Measurement Month" for purposes of measuring the monthly Annual Host Community Agreement Fees payable following the end of such month), calculate Cumulative Year to Date (YTD) Gross Gaming Revenue by summing all monthly Gross Gaming Revenues since January 1 of the Casino Year to the end of the current month.

2) Annualize YTD Gross Gaming Revenue to arrive at Projected Annual Gross Gaming Revenue as of the end of the Measurement Month by multiplying the Year to Date Gross Gaming Revenue as of the end of the Measurement Month by the applicable Annualizing Coefficient for the corresponding month.

Month	**Annualizing Coefficient**	**# Months Remaining in Casino Year**	**Payment Due Date**
January	12.00	12	February 10
February	6.00	11	March 10
March	4.00	10	April 10
April	3.00	9	May 10
May	2.40	8	June 10
June	2.00	7	July 10
July	1.71	6	August 10
August	1.50	5	September 10
September	1.33	4	October 10
October	1.20	3	November 10
November	1.09	2	December 10

3) Based on Projected Annual Gross Gaming Revenue as of the end of the Measurement Month, use the tables in Exhibit K-1 to calculate the Projected Annual Host Community Agreement Fee payment as of the end of the Measurement Month.

4) Subtract the total YTD payments made by the Developer to the City from the Projected Annual Host Community Agreement Fee payments to arrive at the Net Remaining Annual Host Community Agreement Fees due.

5) Divide Net Remaining Annual Host Community Agreement Fees by the number of months remaining in the Casino Year to arrive at the monthly payment amount to be

made to the City for that month, which payment shall be due on or before the date set forth in the table above.

For the monthly payment for December of each Casino Year:

1) Obtain the Gross Gaming Revenues for the Casino Year as certified by the Commission on February 1 of each year, or if such information is not available, calculate Cumulative YTD Gross Gaming Revenue by summing all Gross Gaming Revenues for the Casino Year.

2) Use the tables in Exhibit K-1 to calculate the Annual Host Community Agreement Fee payment for the Casino Year.

3) Subtract the total YTD payments made by the Developer to the City from the Projected Annual Host Community Agreement Fee payments.

4) If applicable, subtract the Excise Tax (as defined below).

The monthly payment for December is due on or before April 1 of the following Casino Year.

The City further agrees that, to the extent that the Project receives the 121A Approvals and the Developer is required to make a payment in accordance with Section 10 of Chapter 121A ("Excise Tax"), the fair cash value of the real and personal property constituting the Project, as of January 1 of the year in which the Early Opening Operations Commencement Date first occurs and for each succeeding January 1 of the year next following the year in which the Developer's property tax exemption under Chapter 121A shall terminate, shall be an amount which, when used in the computation of the Excise Tax for or with respect to the previous calendar year, would result in an Excise Tax no greater than the amount which would be due in accordance with the terms of a contract by and between the Developer and the City as required in accordance with the terms of Section 6A of said Chapter 121A.

The calculations set forth above shall be appropriately modified for the first Casino Year and last Casino Year if either is less than a full calendar year, consistent with the principles set forth in this Exhibit K-2.

EXHIBIT L

Form of Estoppel

ESTOPPEL CERTIFICATE

This Estoppel Certificate (this "Estoppel") dated as of the ____ day of _____, 20__, is executed by the City of Boston, Massachusetts, a municipal corporation, acting by and through its Mayor, with a principal place of business at 1 City Hall Square, Suite 500, Boston, Massachusetts 02201 (the "City") to and in favor of Sterling Suffolk Racecourse, LLC, a Massachusetts limited liability company with a principal place of business at 525 William F. McClellan Highway, East Boston, Massachusetts 02128 ("Sterling Suffolk")

WHEREAS, the City is a party to that certain Host Community Agreement dated as of August __, 2013 by and between the City and Sterling Suffolk (the "Host Community Agreement") in connection with the development, construction and operation of a destination resort casino complex on land owned by Sterling Suffolk known as Suffolk Downs. Capitalized terms not otherwise defined herein shall have the meanings ascribed to such terms in the Host Community Agreement.

WHEREAS, Sterling Suffolk has requested that the City deliver this Estoppel pursuant to the terms of the Host Community Agreement.

NOW, THEREFORE, the City hereby certifies to Sterling Suffolk, that as of the date hereof, to the City's actual knowledge:

1. The Host Community Agreement is in full force and effect and unmodified.

2. Except as set forth in Exhibit A attached hereto, there is no default under the Host Community Agreement by the Developer.

[remainder of page intentionally left blank]

IN WITNESS WHEREOF, the City has executed this Estoppel under seal as of the date first above written.

EXHIBIT Q

Additional Financing Provisions

A. In connection with any Financing, the Developer shall have the right, without the City's consent but subject to any approvals required under the 121A Approvals, to subject its interest under the Agreement and the Project to the lien of a Mortgage to such Authorized Lender to secure indebtedness of the Developer and to give the Authorized Lender a collateral assignment and pledge, of all of the Developer's interest in, to and under the Agreement (an "Authorized Mortgage") and the Authorized Lender shall have the benefit of this Exhibit Q. The Developer's right to execute and deliver an Authorized Mortgage shall be subject to the following conditions:

The Authorized Mortgage shall be in such form and shall contain such provisions as may be customarily required by Authorized Lenders for similar projects, subject to such modifications as are required to reflect the particular transaction and to eliminate any conflict with the provisions of this Agreement, and within thirty (30) days after the execution of such Authorized Mortgage, the City will be furnished with a certified copy thereof and a street, post office and email address where notices shall be served upon the Authorized Lender identified therein.

B. If the Developer shall execute an Authorized Mortgage pursuant to the provisions hereof, including fulfillment of the preceding conditions, then in such event, commencing with the City's receipt of a copy of such Authorized Mortgage from either the Developer or the Authorized Lender thereunder and a street, post office and email address where notices shall be served upon such Authorized Lender pursuant to Section A above (an "Authorized Mortgage Notice"), and thereafter so long as the City has not received notice from the Developer or the Authorized Lender of the discharge or other termination of the Authorized Mortgage, and except as otherwise mutually agreed to by such Authorized Lender and the City, each in their sole and absolute discretion, the following shall apply:

1. No agreement by the Developer and the City for the cancellation, surrender, or termination of the Agreement shall be effective without the written consent of the Authorized Lender, except to the extent otherwise specifically contemplated by the terms of the Agreement.

2. Upon any default by the Developer pursuant to the provisions of the Agreement, the City shall deliver to the Authorized Lender written notice thereof simultaneously with providing such notice to the Developer. The City shall afford the Authorized Lender thirty (30) days beyond the cure or grace period afforded to the Developer under the Agreement to cure a default under Section VIII(A)(1),(2),(3),(4),(5),(6) and (12) of the Agreement (collectively, "Monetary Defaults") and sixty (60) days beyond the expiration of the cure or grace period afforded to the Developer under the Agreement to cure a default under Section VIII(A)(7),(8),(9),(10),(11),(13),(14),(15),(16) and (17) of the Agreement (collectively, "Non-Monetary defaults"); provided that if a Non-

Monetary Default is of such a nature that it can be cured by the Authorized Lender, but the cure cannot be completed within such additional sixty (60) days, then the period afforded to the Authorized Lender to cure such Non-Monetary Default shall be extended automatically so long as Authorized Lender (i) provides written notice to the City of its intention to cure the Non-Monetary Default within such sixty (60) day period, (ii) commences to cure such Non-Monetary Default within such sixty (60) day period and thereafter diligently prosecutes said cure to completion, (iii) cures all Monetary Defaults within the thirty (30) day cure period above and ensures that all other payment obligations under the Agreement are timely paid and (iv) cures all other Non-Monetary Defaults within the periods provided above; and provided further that the cure periods set forth above with respect to Non-Monetary Defaults (but not Monetary Defaults) shall be extended automatically during the pendency of any proceeding instituted by the Authorized Lender for the foreclosure or other judicial enforcement of the Authorized Mortgage to sell or acquire the Project, said extension for Non-Monetary Defaults to continue as long as the Authorized Lender prosecutes said proceedings diligently and in good faith to foreclose the Authorized Mortgage or to acquire the Project.

3. In case the Developer's interest under the Agreement or the Project shall be assigned or otherwise transferred to an Acquiring Party (as defined below) pursuant to the exercise of any right, power or remedy of any Authorized Lender or pursuant to judicial proceedings, as a consequence of a default under the Authorized Mortgage or any related loan document (individually, a "Mortgage Default"), the City, within sixty (60) days after receiving written request therefor, and upon payment to the City of all expenses, including reasonably attorneys' fees incident thereto, and provided that all prior Monetary Defaults under the Agreement have been cured and all continuing Non-Monetary Defaults under the Agreement have been cured to the extent that they can be cured by the Acquiring Party (provided that the City has provided notices of all such Monetary Defaults and Non-Monetary Defaults in accordance with Section B(2) above), will execute and deliver such instrument or instruments as may be required to confirm such transfer of the Developer's interest under the Agreement to the Acquiring Party; provided, however, that such Acquiring Party must possess equal or better financial strength as the Developer as of the Effective Date and must have equal or greater industry experience as the Developer as of the Effective Date.

4. The restrictions set forth in Section VII of the Agreement (Transfers and Assignment) shall not apply to any transfer to a Authorized Lender or its designee pursuant to a foreclosure or other exercise of the security rights held by the Authorized Lender, or deed in lieu of foreclosure or similar measure afforded to a Authorized Lender or its designee, nor to the transfer to any third party purchaser who may acquire the interest of the Developer in the Project directly in a foreclosure or other enforcement proceeding (the acquiring Authorized Lender or third party referred to herein as an "Acquiring Party"); provided, however, that as set forth above, such Acquiring Party must possess equal or better financial

strength as the Developer as of the Effective Date and must have equal or greater industry experience as the Developer as of the Effective Date.

5. In the event an Acquiring Party should, following a Mortgage Default by the Developer, ever succeed to the interest of the Developer under the Agreement or the Project, it is explicitly understood and agreed that the liability of said Acquiring Party as the Developer hereunder shall be limited to matters arising or occurring from and after the date that such Acquiring Party obtains possession of the Project or succeeds to the interest of the Developer under the Agreement (whichever is sooner), provided that such Acquiring Party also shall be obligated to cure all Monetary Defaults and all continuing Non-Monetary Defaults (provided that the City has provided notices of all such Monetary Defaults and Non-Monetary Defaults in accordance with Section B(2) above), to the extent that they can be cured by the Acquiring Party, under the Agreement arising before such Acquiring Party has become the Developer under the Agreement and obtain the appropriate approvals from the BRA as required in accordance with the terms of the 121A Approvals.

6. It is explicitly understood and agreed that any Authorized Lender shall have the right to give, on behalf of and in place of the Developer, any notice or election or decision which the Developer otherwise has the right to give, and that, following the delivery of the Authorized Lender Notice related to such Authorized Lender, any such action by an Authorized Lender hereunder shall be recognized by the City and the Developer as an action of the Developer hereunder.

The City agrees that any Acquiring Party shall have the right to operate the Project in the Developer's place and stead as the Developer hereunder, and said Acquiring Party shall, by virtue of its obtaining possession of the Project, be deemed to be the Developer under the Agreement, subject to the provisions of Section B(5) above, and shall execute an express written assumption of all the terms and conditions of the Agreement (which assumption shall be in form and substance satisfactory to the City). Any Acquiring Party shall be subject to the Transfer restrictions with regard to any subsequent Transfer of the Agreement or of the Acquiring Party's interest in the Project. Any act of assignment to an Acquiring Party or deed in lieu of foreclosure executed to an Acquiring Party as a result of a Mortgage Default shall be subject to the written assumption by the Acquiring Party of all of the terms and conditions of the Agreement and to obtaining all appropriate approvals as required in accordance with the terms of the 121A Approvals. Following such a Transfer, the Acquiring Party shall have the right to operate the Project in accordance with the Agreement. Each Acquiring Party shall provide written notice to the City of its possession of or acquisition of the Project within five (5) days after the date thereof.

Attachment B2

Host Community Agreement Revere

HOST COMMUNITY AGREEMENT

THIS AGREEMENT (this "Agreement") is by and between the **CITY OF REVERE**, a Massachusetts municipality acting by and through its duly authorized Mayor, having a principal place of business at 281 Broadway, Revere, Massachusetts 02151 (the "City"), and **STERLING SUFFOLK RACECOURSE, LLC**, a Massachusetts limited liability company having a principal place of business at 525 McClellan Highway, East Boston, Massachusetts 02128 (the "Owner"), dated as of August 28, 2013 (the "Effective Date"). Hereinafter, the "Owner" shall also mean the Owner's successors and/or assigns. Hereinafter, the Owner and the City are together the "Parties" and individually a "Party."

RECITALS

Reference is made to the following facts:

1. The Owner is the owner of a 161-acre parcel of land (the "Property") located both in the City and the City of Boston, Massachusetts, of which approximately 45 acres are located in the City and approximately 116 acres are located in the City of Boston, on which the Owner operates historic Suffolk Downs, a thoroughbred horse racing facility licensed pursuant to the provisions of M.G.L. chapter 128A, and which is licensed to conduct simulcast wagering pursuant to the provisions of M.G.L. chapter 128C.

2. The Owner has filed an application with the Massachusetts Gaming Commission (the "Commission") seeking a license to operate a resort gaming establishment (a "Gaming License") at the Property together with Caesars Massachusetts Management Company, LLC (the "Project") pursuant to the provisions of M.G.L. chapter 23K ("Chapter 23K").

3. The City is a "Host Community" as that term is defined and used in Chapter 23K, because the Owner has proposed locating a portion of its gaming establishment within the municipal boundaries of the City.

4. The Owner intends to request from the City a binding vote of the residents of the City on the ballot question specified in Section 15(13) of Chapter 23K (the "Ballot Question Election").

5. In accordance with Sections 15(8) and 15(13) of Chapter 23K, prior to requesting the Ballot Question Election the Owner is required to enter a "Host Community Agreement" with the City, as that term is defined and used in Chapter 23K, setting forth the conditions to have a gaming establishment located within the City, including a community impact fee for the City and all stipulations of responsibilities between the City and the Owner, including stipulations of known impacts from the Project.

6. This Agreement is the "Host Community Agreement" between the Owner and the City for the Project, as contemplated by Section 15(8) of Chapter 23K.

7. The Parties acknowledge that total investment in the Project (including improvements to the regional infrastructure) will be approximately $1 billion. In addition, the Project is expected to bring significant new investment to the City, increased governmental revenue and new permanent employment opportunities for residents of the City and other local communities, all as specified in this Agreement.

8. The Parties acknowledge the Project will result in at least 2,500 construction jobs and at least 4,000 permanent jobs.

9. The Parties acknowledge that once all stages of the Project are complete and open to the public, the Project's annual "Gross Gaming Revenue" (defined below) is anticipated to be approximately $1 billion. For the purposes of this Agreement, "Gross Gaming Revenue" shall have the same meaning as given to such term in Chapter 23K, and shall also specifically include, to the extent permitted by the Commonwealth at any time in the future, gross revenues attributable to the Owner's Gaming License or the Project and received by the Owner or its controlled affiliates from internet-based gaming, sports betting or any other forms of gaming authorized by laws enacted after the Effective Date, but shall not include pari-mutuel wagering such as is currently authorized at the Property under M.G.L. c. 128A and M.G.L. c. 128C.

10. Pursuant to Chapter 23K, a portion of the state taxes on the Project's Gross Gaming Revenue would be, following the date that any stage of the Project opens for gaming to the general public (the "Opening"), allocated to a state community mitigation fund (the "Community Mitigation Fund"). Upon the Owner's receipt of a Gaming License, the City would have the ability to apply for payments from the Community Mitigation Fund to address some of the impacts of the Project.

11. Pursuant to Chapter 23K, a portion of the state taxes on the Project's Gross Gaming Revenue would be allocated to a state grant program to be administered by the Massachusetts Cultural Council. Upon the Owner's receipt of a Gaming License, municipally-owned performing arts centers in the area that are impacted by the Project would have the ability to apply for grants from this program.

12. In addition to the new jobs and direct investment at the Property, the Project is expected to promote small businesses and the tourism industry and have a positive economic impact on the City and the Commonwealth of Massachusetts. The Project is expected to permit tourists to enjoy both the gaming establishment and the unique cultural and social resources of the City, resulting in additional enjoyment of and support for those resources.

13. Suffolk Downs opened in 1935 and remains New England's only operating thoroughbred racetrack. The operation of the racetrack requires the dedication of approximately 63 acres to operate a one-mile oval racing surface and related open space, all in an urban environment. The maintenance of this open space and related view corridor is an important community amenity.

14. Suffolk Downs is located in an area designated in the Zoning Ordinance of the City of Revere as Planned Development District 1, and the City has concluded that the proposed use of

the Property as a gaming establishment is consistent with the City's economic plans and priorities, all in accordance with Section 9(a)(18) of Chapter 23K.

15. The City recognizes the historic civic support Suffolk Downs has contributed to the City and its residents.

16. The Owner and the City have entered into this Agreement to evidence the obligations of the Owner to make certain payments to the City and to undertake certain mitigation measures with respect to the Project.

THEREFORE, for good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the Parties hereby enter into this Agreement with mutual understandings and agree as follows:

SECTION 1. IMPACTS OF THE PROJECT

A. STIPULATIONS OF KNOWN IMPACTS

1. The Parties intend that this Section 1.A shall be deemed to be the "stipulations of known impacts" that are required to be included in this Agreement pursuant to Section 15(8) of Chapter 23K.

2. The Project is expected to increase the number of vehicles using the City's public ways and other highways and roads in the vicinity of the Project. The projects identified in the provisions of this Agreement regarding infrastructure improvements will mitigate such impacts and remedy longstanding background traffic conditions.

3. The Project may have an impact on crime in the City and is expected to require additional expenditures by the City in order to provide police services to the Project and the areas located near the Property. In addition to the relevant sections of Chapter 23K that address the provision of state and local police services to the Project, the Owner's payments to the City under this Agreement will provide the City with adequate resources to mitigate any such impacts.

4. The Project is expected to have an impact on municipal services and require additional expenditures by the City in order to provide such services to the Project. The Owner's payments to the City under this Agreement will provide the City with adequate resources to mitigate any such impacts.

5. As planned, the Project would be constructed within the municipal boundaries of the City of Boston and no new significant construction is currently proposed on the portion of the Property located in the City, thereby resulting in no significant increase in the City's tax levy. The Owner's payments to the City under this Agreement will mitigate any such impacts.

6. The Project may have an impact on problem or compulsive gambling in the City. In addition to the relevant sections of Chapter 23K providing financial and other resources

necessary to address problem or compulsive gambling, provisions of this Agreement regarding compulsive gaming resources will mitigate such impacts.

7. Other impacts of the Project are noted in the various studies obtained and reviewed by the City, and the matters addressed in this Agreement will mitigate such impacts.

B. ADDITIONAL IMPACTS

1. The Parties acknowledge that there may be additional impacts associated with the Project that are unknown as of the Effective Date (the "Additional Impacts"). The Parties intend that any Additional Impacts of the Project that are not sufficiently mitigated through this Agreement shall be mitigated through the Commission's licensing process, through any other state or municipal permitting processes that may be necessary to carry out the Project and through the Community Mitigation Fund established by Section 61 of Chapter 23K.

2. Consistent with the Gaming Commission's regulations, set forth at 205 CMR 127, which are designed to protect host communities from significant and material adverse impacts occurring after the execution of a host community agreement, the Owner and the City shall, if reasonably necessary under the circumstances, negotiate in good faith an amendment to this Agreement if a triggering event, as provided in 205 CMR 127.02, occurs.

3. Notwithstanding Section 1.B.2 of this Agreement and consistent with the provisions of 205 CMR 127.06, the Owner and the City shall (i) negotiate in good faith amendments to this Agreement to correct any non-material terms or typographical errors in this Agreement, and (ii) negotiate in good faith amendments to this Agreement (if any) under the conditions as expressly set forth elsewhere in this Agreement.

SECTION 2. RESPONSIBILITIES AND UNDERTAKINGS BY THE OWNER

A. INFRASTRUCTURE

The Owner shall complete a series of infrastructure improvements in connection with the Project, which are anticipated to cost the Owner in excess of $45,000,000, including, without limitation:

1. Boardman Street FlyOver. The Boardman Street/Route 1A intersection is a critical regional intersection located at the corner of Boardman Street and Route 1A. The Owner shall fund and cause the permitting, design and construction of – in coordination with state and municipal agencies, and in consultation with the City – a so-called "FlyOver" described conceptually in the attached Exhibit B (the "Boardman Street FlyOver"), to alleviate and improve traffic conditions at the intersection and on Route 1A generally, the cost of which is anticipated to exceed $25,000,000, or such other superior improvements as may be approved by MassDOT. In addition to addressing certain traffic and transportation impacts associated with the Project, the Boardman Street FlyOver is intended to address existing historic and background traffic issues of concern to the City, neighboring communities and the region. The Owner shall

diligently pursue the completion of the Boardman Street FlyOver following the date that the Owner closes on the initial funding under the third party financing for the construction of the Project (the "Financing Date"); provided, however, that the completion of the Boardman Street FlyOver shall occur as required under the MEPA Secretary's Certificate for the Project and shall not be a condition to Opening.

2. Route 1/Route 16 Interchange.

(a) The City has had a long-standing concern about, and interest in, improving traffic flow and conditions at the Route 1/Route 16 interchange, both to improve the interchange and to ameliorate traffic conditions within the City, particularly along the Route 60 corridor. The Owner shall fund and cause the permitting, design and construction of – in coordination with state and municipal agencies, including the City – a series of intermediate geometric improvements and new signalizations described conceptually in the attached Exhibit C, to provide access to Route 1 northbound from Route 16 westbound and to facilitate access from Route 1 southbound to Route 16 eastbound (collectively, the "Route 1/Route 16 Intermediate Improvements"), the cost of which is anticipated to exceed $2,100,000. Consistent with the Boston Metropolitan Planning Organization's Lower North Shore Transportation Improvement Study (prepared by the Central Transportation Planning Staff for the Massachusetts Highway Department in October of 2000), the Route 1/Route 16 Intermediate Improvements are intended to transfer Project traffic and some regional traffic from the Route 60 corridor to Route 1/Route 16. The Owner shall diligently pursue the completion of the Route 1/Route 16 Intermediate Improvements following the Financing Date; provided, however, that the completion of the Route 1/Route 16 Intermediate Improvements shall not be a condition to Opening; and, provided further, that the Owner shall complete the Route 1/Route 16 Intermediate Improvements within eighteen (18) months after the date that all state and local approvals and necessary rights of way (if any) for such improvements have been obtained and/or all appeal periods applicable to any such approvals have expired with no appeals pending.

(b) In coordination with state and municipal agencies, including the City, and prior to completing the construction phase of the Route 1/Route 16 Intermediate Improvements, the Owner shall fund and complete a study of the Route 1/Route 16 interchange for the purpose of planning additional improvements unrelated to the Route 1/Route 16 Intermediate Improvements, the cost of which is estimated to be approximately $400,000. The study will be in the nature of a long-range plan for the interchange based on a conceptual plan consistent with long range plans for interchange developed in the North Shore Transportation Study by CTPS. The plan is limited to a study of the merits of the design and does not include a full review of the environmental planning process nor final design plans.

3. Additional Roadway Improvements. The Owner shall fund and cause the permitting, design and construction – in coordination with state and municipal agencies, including the City – of the roadway improvements described in Subparagraphs 3(a) through 3(c) below (the "Additional Roadway Improvements") each to be generally consistent with the preliminary conceptual plans prepared by the Owner's transportation consultant, which were reviewed by the City's transportation consultant prior to the Effective Date, subject to reasonable adjustments and

modifications. The Owner shall obtain the City's approval for all preliminary and final plans for the Additional Roadway Improvements. The Owner shall diligently pursue the completion of such Additional Roadway Improvements following the Financing Date; provided, however, that the completion of such Additional Roadway Improvements shall not be a condition to Opening; and, provided further, that the Owner shall complete the Additional Roadway Improvements within eighteen (18) months after the date that all state and local approvals and necessary rights of way (if any) for such improvements have been obtained and/or all appeal periods applicable to any such approvals have expired with no appeals pending. The Additional Roadway Improvements are as follows:

(a) Route 16/Revere Beach Parkway/Harris Street Intersection (cost estimated to be approximately $1,600,000):

(i) Design and implementation of an optimal traffic signal timing and phasing plan, including split phasing;

(ii) Construction of two exclusive right turn lanes eastbound onto Revere Beach Parkway;

(iii) Construction of pedestrian safety improvements to allow for safe pedestrian routes from Winthrop Avenue to Revere Beach Parkway in both eastbound and westbound directions, including associated sidewalk reconstruction, curb ramps, crosswalks and median improvements; and

(iv) Installation of an emergency vehicle preemption system.

(b) Donnelly Square (cost estimated to be approximately $860,000):

(i) Design and implementation of an optimal traffic signal timing and phasing plan, including split phasing, for the weekday morning, weekday evening and Saturday midday peak periods;

(ii) Redesign of the intersection to channelize traffic flow on the intersection approaches;

(iii) Construction of permanent pedestrian crosswalks with new ADA accessible ramps at all crosswalks within the Donnelly Square area;

(iv) Construction of aesthetic improvements within the Donnelly Square area, including new pavement markings;

(v) Construction of landscaping improvements within the Donnelly Square area and along Winthrop Avenue leading to the Project entrance at Revere Beach Parkway and Tomasello Drive; and

(vi) Installation of an emergency vehicle preemption system.

(c) North Shore Road/Revere Beach Parkway/Tomasello Drive Intersection (cost estimated to be approximately $1,000,000):

(i) Design and implementation of an optimal traffic signal timing and phasing plan at the intersection of North Shore Road and Revere Beach Parkway, including split phasing, to accommodate increased traffic movements associated with the Project;

(ii) A study of alternatives for the provision of an exclusive right hand turning lane into the Tomasello Drive entrance to the Project;

(iii) Construction of pedestrian safety improvements at the intersection and along Revere Beach Parkway, including traffic median improvements and potential realignment; and

(iv) Installation of an emergency vehicle preemption system.

4. Beachmont Streetscape Improvements. Not later than the Financing Date, in conjunction with the work proposed for Donnelly Square, the Owner shall submit to the City plans for streetscape, lighting, planting and other infrastructure improvements in and around the area bounded by Winthrop Avenue, Unity Avenue, Bennington Street and Washburn Avenue in the city's Beachmont neighborhood (the "Beachmont Streetscape Improvements"). Upon receiving the City's approval of the Beachmont Streetscape Improvements, the Owner shall fund and diligently cause the permitting, design and construction of the Beachmont Streetscape Improvements; provided, however, that the completion of such Beachmont Streetscape Improvements shall not be a condition to Opening; and provided further, that the Owner shall complete the Beachmont Streetscape Improvements within twelve (12) months after the date all state and local approvals and necessary rights of way (if any) for such improvements have been obtained and/or all appeal periods applicable to any such approvals have expired with no appeals pending. The foregoing Beachmont Streetscape Improvements are estimated to cost not less than $200,000.

5. Route 1A Planning. The City has a long-standing concern about, and interest in, improving traffic flow along Route 1A from the south. In connection with such concerns, not later than the one year anniversary of the Opening the Owner shall provide to the City a feasibility study, by a consultant or consultants reasonably approved by the City, of various options available to improve traffic flow along Route 1A from the south. The foregoing study is estimated to cost approximately $150,000.

6. Copeland Circle / Route 1. The City has a long-standing concern about, and interest in, improving traffic in the Copeland Circle area. In connection with such concerns, not later than the one year anniversary of the Opening the Owner shall provide to the City a long range plan for this segment of roadway consistent with conceptual plans developed in the North Shore Transportation Study by CTPS, to be completed in conjunction with the plan for the Route

1/Route 16 interchange described above. The plan is limited to a study of the merits of the design and does not include a full review of the environmental planning process nor final design plans.

7. City Infrastructure Improvements. Not later than the Financing Date, the Owner shall make a payment to the City in the amount of $1,267,000 (the "Additional Transportation Contribution") for use by the City in its discretion to complete certain improvements to Mahoney Circle, Brown Circle, and the Route 60/Revere Street Intersection, substantially as described in subsections (a) through (c) below (collectively, the "City Intersection Improvements"); provided, however, that the City shall coordinate the City Intersection Improvements with the Owner and relevant state agencies; and, provided further, that in the event that the Owner is required to complete any portions of the City Intersection Improvements pursuant to any state or local permits, licenses or approvals obtained in connection with the Project (including, without limitation, the Project's MEPA Certificate), then the City shall have no obligation or liability to the Owner to complete such portions of the City Intersection Improvements and the amount of the Additional Transportation Contribution shall be reduced by the amount of the costs incurred by the Owner in connection with completing such portions of the City Intersection Improvements. The City Intersection Improvements are as follows:

(a) Mahoney Circle:

(i) Design and implementation of a comprehensive upgrade of the signs and pavement markings approaching and within Mahoney Circle, consistent with the Manual on Uniform Traffic Control Devices ("MUTCD") standards, to improve motorist and pedestrian guidance and safety;

(ii) Installation of ADA accessible ramps and associated sidewalk and median improvements within and around Mahoney Circle;

(iii) Design and installation of channelization and signalization improvements within and around Mahoney Circle;

(iv) Construction of upgrades to the traffic islands within Mahoney Circle, including new curbing and landscaping; and

(v) Installation of an emergency vehicle preemption system.

(b) Brown Circle:

(i) Design and implementation of a comprehensive upgrade of the signs and pavement markings approaching and within Brown Circle, consistent with the MUTCD standards, to improve motorist and pedestrian guidance and safety;

(ii) Installation of ADA accessible ramps and associated sidewalk and median improvements within and around Brown Circle;

(iii) Design and implementation of channelization and signalization improvements, including new pavement and directional markings and channelization islands, at the Route 107 northbound approach to Brown Circle;

(iv) Construction of geometric and channelization improvements by extending existing islands and installing new islands to facilitate safer traffic flow; and

(v) Installation of an emergency vehicle preemptions system.

(c) Route 60/Revere Street Intersection:

(i) Design and implementation of an optimal traffic signal timing and phasing plan at the intersection, including split phasing;

(ii) Construction of pedestrian safety improvements including new crosswalks and ADA accessible ramps with associated sidewalk reconstruction; and

(iii) Installation of an emergency vehicle preemption system.

8. MBTA and Bicycle Access Improvements. The Owner shall fund and cause the permitting, design and construction – in coordination with state and municipal agencies, including the City – of the MBTA and Bicycle Access Improvements described conceptually in the attached Exhibit D.

9. Modification of Infrastructure Improvements. The Parties acknowledge that many of the infrastructure improvements described in this Section 2.A (an "Infrastructure Improvement" or the "Infrastructure Improvements"), require the approval of various state and municipal agencies other than the City. If the City reasonably determines that any modification to an Infrastructure Improvement or the refusal to authorize all or a portion of an Infrastructure Improvement by a state or municipal agency would materially and adversely affect the City, then the City shall promptly notify the Owner of such determination and the Parties shall negotiate in good faith an amendment to this Agreement to mitigate such adverse impacts.

B. PAYMENTS TO THE CITY

Except as otherwise set forth in this Agreement, all payments required under this Section 2.B are in addition to any costs incurred by the Owner in compliance with any other sections of this Agreement, and in addition to any taxes or other legally required payments made to the City by the Owner.

1. Initial Payments and Pre-Payments. The Owner shall make payments to the City as follows:

(a) Initial Payments:

(i) The Owner shall make a payment to the City in the amount of Four Million Dollars ($4,000,000), which payment shall be due in full on the later of (i) July 15, 2014, or (ii) thirty (30) calendar days after the date the Owner receives its Gaming License, in conditional or final form, and notwithstanding any appeals of such Gaming License (the "First Initial Payment"). The First Initial Payment shall be made notwithstanding the Opening and shall be made in addition to any other payments due to the City by the Owner under this Agreement.

(ii) The Owner shall make a payment to the City in the amount of Four Million Dollars ($4,000,000), which payment shall be due in full on the later of (i) May 1, 2016, or (ii) the Financing Date (the "Second Initial Payment"). The Second Initial Payment shall be made notwithstanding the Opening, which may occur prior to May 1, 2016, and shall be made in addition to any other payments due to the City by the Owner under this Agreement, including any payments of the Community Impact Fee (defined below) made prior to or after May 1, 2016.

(b) Pre Payments:

On May 1 of each year after 2016 until the Opening, the Owner shall make a payment to the City in the amount of Four Million Dollars ($4,000,000) as pre-payment of the Community Impact Fee set forth herein, (a "Pre-Payment" or the "Pre-Payments"); provided, however, that the Owner shall not be obligated to make any Pre-Payments until the Financing Date if the Financing Date occurs after May 1 of a year after 2016. All Pre-Payments shall be subject to adjustment as set forth in Section 2.B.2(g).

(c) Pro Rata Adjustment of the Final Pre-Payment:

The final Pre-Payment shall be due in full on May 1 in the City fiscal year (July 1 to June 30) in which the Opening occurs; provided, however, that the Owner is entitled to a pro-rated credit against the final Pre-Payment, said credit to be the sum of all payments made to the City pursuant to Section 2.B.2 of this Agreement during the City fiscal year in which the Opening occurs, unless such difference would be a negative number, in which event no Pre-Payment would be required by the Owner in the City fiscal year in which the Opening occurs.

(d) Notwithstanding the foregoing, the Owner shall not be obligated to make the Frist Initial Payment, the Second Initial Payment or any Pre-Payments if this Agreement is terminated pursuant to Section 4.N(b) or (c) of this Agreement.

2. Community Impact Fee. Commencing on the Opening, the Owner shall make payments to the City referred to herein as the "Community Impact Fee", which is the community impact fee called for by Section 15(8) of Chapter 23K. For the purposes of this Agreement, an "Impact Fee Year" shall be each successive twelve (12) month period following the Opening. Payment of the Community Impact Fee shall be as follows:

(a) First Impact Fee Year:

Commencing on the first day of the month after the Opening and continuing on the first day of each month thereafter during the first Impact Fee Year, the Owner shall make monthly installment payments of the Community Impact Fee to the City (an "Installment Payment" or the "Installment Payments"), each to be one percent (1.00%) of the Project's Gross Gaming Revenue in the prior calendar month; provided that in no event shall the sum of the twelve (12) Installment Payments in the first Impact Fee Year be less than Four Million Two Hundred Fifty Thousand Dollars ($4,250,000) (the "First Minimum Payment").

(b) Second Impact Fee Year:

Commencing on the first day of the month after the first Impact Fee Year and continuing on the first day of each month thereafter during the second Impact Fee Year, the Owner shall make monthly Installment Payments to the City, each to be one and one quarter percent (1.25%) of the Project's Gross Gaming Revenue in the prior calendar month; provided that in no event shall the sum of the twelve (12) Installment Payments in the second Impact Fee Year be less than Four Million Seven Hundred Fifty Thousand Dollars ($4,750,000) (the "Second Minimum Payment").

(c) Third Impact Fee Year:

Commencing on the first day of the month after the second Impact Fee Year and continuing on the first day of each month thereafter during the third Impact Fee Year, the Owner shall make monthly Installment Payments to the City, each to be one and one quarter percent (1.25%) of the Project's Gross Gaming Revenue in the prior calendar month; provided that in no event shall the sum of the twelve (12) Installment Payments in the third Impact Fee Year be less than Five Million Dollars ($5,000,000) (the "Third Minimum Payment").

(d) Fourth Impact Fee Year:

Commencing on the first day of the month after the third Impact Fee Year and continuing on the first day of each month thereafter during the fourth Impact Fee Year, the Owner shall make monthly Installment Payments to the City, each to be one and one half percent (1.50%) of the Project's Gross Gaming Revenue in the prior calendar month; provided that in no event shall the sum of the twelve (12) Installment Payments in the fourth Impact Fee Year be less than Five Million Five Hundred Thousand Dollars ($5,500,000) (the "Fourth Minimum Payment").

(e) Fifth and Subsequent Impact Fee Years:

Commencing on the first day of the month after the fourth Impact Fee Year, and continuing on the first day of each month thereafter for the duration of this Agreement, the Owner shall make monthly Installment Payments to the City as follows, each to be one and one half percent (1.50%) of the Project's Gross Gaming Revenue in the prior calendar month; provided that in no event shall the sum of the twelve (12) Installment Payments in the fifth and all subsequent Impact Fee Years be less than Nine Million Dollars ($9,000,000) (the "Ongoing Minimum Payment").

(f) Heightened Gross Gaming Revenue:

Notwithstanding any provision of Sections 2.B.2(a), (b), (c), (d) or (e) of this Agreement to the contrary, in any Impact Fee Year for which the Project's Gross Gaming Revenue is One Billion Two Hundred Fifty Million Dollars ($1,250,000,000) (as escalated for inflation using mutually agreeable, then applicable consumer price indexes in good faith) or greater, the Owner shall make a Make-Whole Payment (defined below) to the City such that the total Community Impact Fee paid the City for such Impact Fee Year is equal to one and three quarters percent (1.75%) of the Project's Gross Gaming Revenue; and, provided further, that in any Impact Fee Year for which the Project's Gross Gaming Revenue is One Billion Five Hundred Million Dollars ($1,500,000,000) (as escalated for inflation using mutually agreeable, then applicable consumer price indexes in good faith) or greater, the Owner shall make a Make-Whole Payment to the City such that the total Community Impact Fee paid the City for such Impact Fee Year is equal to two percent (2%) of the Project's Gross Gaming Revenue.

(g) Make-Whole Payment:

The Owner hereby agrees to pay, not later than fifteen (15) days following the end of each Impact Fee Year (i) any amount by which the sum of the twelve (12) Installment Payments made during such Impact Fee Year was less than the First Minimum Payment, the Second Minimum Payment, the Third Minimum Payment, the Fourth Minimum Payment or the Ongoing Minimum Payment, respectively, or (ii) any amount required by Section 2.B.2(f) of this Agreement (a "Make-Whole Payment").

(h) Certification of Gross Gaming Revenue:

Each monthly Installment Payment and Make-Whole Payment made to the City under Section 2.B.2 of this Agreement shall be accompanied by documentation reasonably acceptable to the City certifying the Gross Gaming Revenue received by the Owner in the respective payment period.

(i) Credits for Pre-Payments.

The City and the Owner agree that in each of the first five (5) Impact Fee Years, the amount of the annual Community Impact Fee to be paid by the Owner to the City shall be reduced by an amount equal to twenty percent (20%) of the aggregate amount of the Pre-Payments, provided that in no event shall such reduction cause the Community Impact Fee in any Impact Fee Year to be less than the First Minimum Payment, the Second Minimum Payment, the Third Minimum Payment, the Fourth Minimum Payment or the Ongoing Minimum Payment, respectively; provided further that in the event that the Community Impact Fee in any Impact Fee Year is not sufficiently higher than the First Minimum Payment, the Second Minimum Payment, the Third Minimum Payment, the Fourth Minimum Payment or the Ongoing Minimum Payment, respectively, to provide the reduction that would otherwise be due, then the amount of the reduction not received by the Owner shall be provided in the next Impact Fee Year in which the Community Impact Fee is sufficient to allow such reduction to be received. For example, if the aggregate amount of the Pre-Payments is $6,000,000, then the Community Impact Fee shall be reduced by $1,200,000 in each of the first five (5) Impact Fee Years. For the purpose of clarity, the entirety of the Pre-Payments shall be repaid to the Owner in the form of reductions in the Community Impact Fee due from the Owner to the City.

C. UNANTICIPATED PRE-DEVELOPMENT TAX INCREASE OFFSETS

1. For City fiscal year 2013, total real property taxes due to the City for the approximately 45 acres of the Property located in the City (the "Revere Property") were approximately $343,164.50. Until such time as the Owner receives a Material Building Permit, defined below, the City and the Owner do not anticipate that the total real property taxes due to the City for the Revere Property for any subsequent City fiscal year will increase by more than five percent (5%) over the prior City fiscal year (the "Maximum Anticipated Tax Bill"). The Owner is relying on this mutual understanding regarding the Maximum Anticipated Tax Bill as a basis for its agreement to make the Community Impact Fee payments set forth herein.

2. The Owner and the City anticipate that the Owner will construct on the Revere Property certain improvements to existing racing-related structures (such as barns, maintenance buildings, and the like) and surface parking improvements accessory to the Project (the "Anticipated Improvements"). Notwithstanding Section 2.C.1 of this Agreement, increases in total real property taxes due to the City for the Revere Property attributable to any Anticipated Improvements shall not be counted towards the calculation of the Maximum Anticipated Tax Bill in the City fiscal year in which such Additional Improvements are first assessed, but shall be counted towards the calculation of the Maximum Anticipated Tax Bill in subsequent City fiscal years.

3. Upon the Effective Date, in the event that total real property taxes due to the City for the Revere Property for any City fiscal year exceed the Maximum Anticipated Tax Bill (exclusive of Anticipated Improvements), then the Owner may reduce the payments made under Section 2.B.2 of this Agreement in the next succeeding Impact Fee Year by the amount due to the City in excess of the Maximum Anticipated Tax Bill. For example, if the Maximum Anticipated Tax Bill for a City fiscal year is $350,000, but the actual total real property taxes due to the City in such City fiscal year are $375,000, then the Owner may reduce the payments made under Section

2.B.2 of this Agreement in the next succeeding Impact Fee Year by $25,000, and the Maximum Anticipated Tax Bill for the next City fiscal year shall be $367,500 (5% more than $350,000).

4. The provisions of Sections 2.C.1, 2.C.2, and 2.C.3 above shall be of no force and effect following the date that the Owner receives a building permit for a change of use for the Revere Property or a building permit for an improvement that is not an Anticipated Improvement (a "Material Building Permit").

D. OTHER FINANCIAL OBLIGATIONS

1. Wonderland Greyhound Park. The Owner shall cause its affiliate which owns the property commonly known as the Wonderland Greyhound Park ("Wonderland") to commission a master plan study, conducted by a consultant or consultants reasonably approved by the City, for the future development of Wonderland, provided that such master plan shall be completed and delivered to the City not later than one (1) year after the Owner's receipt of its Gaming License. The City acknowledges that Elkus-Manfredi would be an acceptable consultant if selected by the Owner to prepare the master plan study.

2. Community Improvements. Not later than the Financing Date, the Owner shall (i) make a payment to the City in the amount of Two Million Dollars ($2,000,000) towards the renovation by the City of the City's football field, (ii) make a payment to the City in the amount of One Million Dollars ($1,000,000) towards the construction of a youth center in the City, and (iii) at the Owner's expense, cause the Owner's architect to prepare schematic designs for a youth center in the City in collaboration with the City.

3. Reimbursement of Costs. The Parties acknowledge that the Owner and the City entered into a separate agreement concerning the reimbursement of costs related to certain of the City's expenses in negotiating this Agreement and carrying out the Ballot Question Election. Following the Ballot Question Election, the Owner shall within thirty (30) days of receipt of a proper invoice, directly reimburse the City for all reasonable costs incurred by the City for outside consultants, legal counsel and other such similar and reasonable costs of third party service providers necessary in connection with (i) the Owner's application for a Gaming License, (ii) the implementation of this Agreement by the City, (iii) the review of the Infrastructure Improvements required by this Agreement, and (iv) other ongoing Project-related expenses; provided, however, that the City shall not seek reimbursement from the Owner for any such costs for which it has received reimbursement from the Gaming Commission; and, provided further, the aggregate amount of such reimbursement for costs incurred after the date hereof in any City fiscal year shall not exceed $50,000.

E. CONSTRUCTION AND PERMANENT EMPLOYMENT

The Owner shall make and cause its agents, operators and contractors to make certain commitments relating to employment at the Project as follows:

1. Construction Employment. The Owner shall ensure that its general contractor or construction manager for the Project and those engaged by said general contractor or construction manager, on a craft-by-craft basis, shall use best efforts to meet the following goals:

(a) at least ten percent (10%) of the total employee worker hours in each trade shall be by bona fide residents of the City; provided, however, that for any future projects by the Owner to be constructed exclusively within the municipal boundaries of the City, the Owner shall in good faith endeavor to substantially increase the percentage of total employee worker hours by bona fide residents of the City in such future projects;

(b) at least twenty five percent (25%) of the total employee worker hours in each trade shall be by minorities; and

(c) at least ten percent (10%) of the total employee worker hours in each trade shall be by women.

2. Permanent Employment.

(a) The Owner shall use best efforts to ensure that at least ten percent (10%) of the total permanent workforce for the Project shall be bona fide City residents; provided, however, that for any future projects by the Owner to be located exclusively within the municipal boundaries of the City, the Owner shall in good faith endeavor to substantially increase the percentage of bona fide City residents within its permanent workforce in such future projects;

(b) The Owner's workforce shall be unionized and organized in accordance with Section 18(18) of Chapter 23K.

(c) Throughout the Term of this Agreement, the Owner shall employ one or more full-time employees to promote awareness of employment and business opportunities at the Project for City residents and businesses, including, without limitation, the job opportunities and local business, purchasing and economic development initiatives set forth in this Agreement, as well as to undertake outreach to neighborhood groups in the City.

(d) The Owner agrees to comply with the job creation and employment commitments listed in the attached Exhibit E.

(e) The Parties acknowledge that the Project is an important public policy initiative that requires the involvement of the entire community and adjoining communities. In that regard, the Owner shall work with the City to devise a plan to hold a jobs fair to promote the opportunities at the facility and shall work with the City to devise a network of training and recruitment partners. The Owner shall work with the City and other communities in the vicinity of the Project to encourage expansion of access to employment for minorities, women and veterans and other disadvantaged groups and generally to expand local employment opportunities. The Owner shall establish a protocol which shall be submitted to the City annually to define and assess these employment and other opportunities for City

residents.

F. PARKING

1. On-Street Parking by Employees Prohibited. The Owner shall, in consultation with the City, adopt and enforce policies prohibiting employees, contractors and agents of the Project from parking their vehicles on streets in the City.

2. Parking on the Property. The Owner shall use reasonable efforts to provide parking facilities on the Property sufficient to accommodate all patrons of the Project.

3. Parking at Wonderland. If the Owner decides, in its sole discretion, to use the Wonderland property to provide parking facilities for patrons, employees, contractors, agents and other visitors of the Project, it shall only do so for a maximum of three (3) years following the Opening, subject to an extension of such time granted in writing by the City in its sole discretion.

4. Parking Plan. The Owner shall, as soon as reasonably possible after the Effective Date and not later than three (3) months after receiving the Gaming License, provide the City with a list of properties located in the City to be utilized by the Owner to provide parking facilities for patrons, employees, contractors, agents and other visitors of the Project. In addition to obtaining any necessary permits, licenses and other approvals from the City for such parking facilities, the Owner shall, in consultation with the City, develop a plan to minimize the impacts of such parking facilities on City residents and businesses.

G. SUPPORT FOR CITY APPLICATIONS FOR COMMUNITY MITIGATION FUNDS

Upon the Effective Date, the Owner shall support the City's requests for payments from the Community Mitigation Fund. Such support shall include, but not be limited to: (i) providing letters in support of the City's applications for funds; (ii) providing any non-proprietary and non-confidential studies, data, or other information requested by the Commission in order to process the City's applications for funds (with costs not to exceed $50,000 per annum); and (iii) making personal appearances and/or testimony from representatives of the Owner at meetings of the Commission in support of the City's applications for funds.

H. ONGOING COMMUNITY MITIGATION

1. Vendor Opportunities. On an annual basis, the Owner shall utilize best efforts to purchase not less than Seven Million Five Hundred Thousand Dollars ($7,500,000.00) in goods and services from vendors and companies with a principal place of business in the City. The Owner shall work with the City to hold vendor fairs that provide City businesses with information concerning providing goods and services to the Project. The Owner shall meet with local businesses regarding any opportunities to open satellite businesses within the Project. Moreover, the Owner shall ensure that City businesses will be able to benefit from partnership programs that incentivize employees and patrons of the Project to utilize City businesses, including through the rewards program maintained by the Owner's operator. In addition, the Owner will create and implement a marketing program for the utilization of minority business

enterprises, women business enterprises and veteran business enterprises to participate as vendors in the provision of goods and services procured by the Owner and any businesses operated as part of the Project. The Owner shall, on a semi-annual basis, consult with the Revere Chamber of Commerce, the Community Advisory Board (defined below) and such other business groups or associations as the City may reasonably request to identify opportunities in furtherance of the objectives set forth in this section. The Owner shall, upon reasonable request, meet with the Mayor to provide updates on the Owner's efforts to comply with this Section 2.H.1. The Owner's obligations under this section shall be subject to the availability of such goods and services on commercially reasonable terms.

2. Community Advisory Board. The Owner shall work with the City to establish a "Community Advisory Board" to provide additional benefits relevant to the impacts of the Project and to generally benefit the City and its residents. The Owner shall work with the Community Advisory Board to develop mechanisms and networks for the inclusion of local vendors, with special emphasis on women, minority and veteran-owned enterprises in accordance with Sections 15(15) and 18(16) of Chapter 23K, and to provide goods, services and materials for the Project on an on-going basis in accordance with Section 18(10) of Chapter 23K, all in coordination with the Owner's obligations under this Agreement. The Owner shall use commercially reasonable efforts to cause its agents, operators and contractors operating in any portion of the Project to comply with this provision.

3. Additionally, the Owner shall:

(a) work with the City to develop a program to provide incentives for employees and patrons of the Project to utilize other businesses located in the City;

(b) enter into a construction mitigation agreement with the City that is similar to the form used by the City of Boston to address and mitigate impacts on the City's residents and businesses associated with construction activity at the Project; and

(c) ensure that taxi cab and livery service businesses based in the City shall have equal access to serve patrons and employees of the Project as is provided to taxi cabs and livery services based outside the City to the extent permitted under applicable laws and regulations.

I. HORSE RACING

As required by Chapter 23K, the Owner, as the holder of a live racing license under M.G.L. c. 128A, shall maintain the existing racing facility on the Property, subject to the permitted changes in the number of live racing days. Nothing in this Agreement shall limit, impact or waive the City's right to receive the local share of racing taxes currently collected by the Commonwealth pursuant to M.G.L. c. 58, § 18D, as the same may be amended.

J. INCREASES IN CAR INSURANCE RATES

The Owner shall use best efforts to work with the Commonwealth's Division of Insurance to monitor, reduce or eliminate increases to car insurance rates within the City that are proposed as a result of the Project, including, without limitation, a safe driver educational program for all employees and the promotion of safe, unimpaired driving for all guests and patrons.

K. VEHICLES FOR HIRE

Due to increase in use of and demand for taxi cabs and other vehicles for hire to serve the Project, the Owner shall work with the City to facilitate and mitigate the use and impact of such vehicles in the City. The City will monitor and enforce rules, regulations and operation of such vehicles.

L. GUARANTEED RIDE HOME PROGRAM

The Owner shall establish a guaranteed ride home program funded and implemented by the Owner to provide safe rides home for patrons whose driving may be impaired. The guaranteed ride home program shall include advertising and informing patrons of the existence of the program and training of employees at the Project with respect to the program In addition, the Owner shall implement a guaranteed ride home program for all employees.

M. COMPULSIVE GAMBLING RESOURCES

The Owner shall implement a responsible gaming plan at the Property to make sure that those people who cannot game responsibly get the help they need and to make sure that people who can game responsibly understand the importance of gaming responsibly. The Owner shall mitigate the potential negative public health consequences associated with the Project.

The Owner shall accomplish the responsible gaming goals for the Project by, among other things: (i) complying in every respect with all responsible gaming provisions in Chapter 23K and all responsible gaming provisions subsequently adopted by the Commission or adopted by the City or its departments or agencies; (ii) ensuring that all patrons of the Project are twenty-one (21) years of age or over, as required by Chapter 23K; (iii) educating its employees through formal training programs about the importance of responsible gaming and underage gambling and the policies and procedures of Owner's responsible gaming programs; (iv) providing information to patrons about the odds of games, signs and symptoms of compulsive gaming and how to make responsible gaming decisions; (v) promoting responsible gaming in daily operations; and (vi) supporting public awareness of responsible gaming, including, at a minimum, working with the National Council on Problem Gambling, Inc., its local councils and other service agencies in and around the City and region on a continuing basis to promote a better understanding of responsible gaming and underage gambling and supporting research on responsible gaming and underage gambling issues through on-going financial contributions.

The Owner shall implement a "self-restriction" program that allows anyone to request not to receive direct marketing by the Owner's owned, managed, or operated properties, as well as to be denied credit and check cashing privileges at the Project. Forms to request self-restriction or

self-exclusion shall be readily available to all customers and individuals who visit the Property.

The Owner shall join and actively participate in the Massachusetts Partnership for Responsible Gaming and actively work with City agencies for the express purpose of assisting the City to address issues of treatment for compulsive behavior, especially problem gaming in the City. The Owner's obligations under this Section 2.M shall not be inconsistent with any applicable orders, rules, policies or other directives of the Commission, the Commonwealth of Massachusetts, or any other governmental body, agency, authority or commission.

N. EXPANSION OF THE GAMING ESTABLISHMENT

If the Owner seeks to expand its gaming establishment onto the Revere Property or beyond the Property onto property located within or outside the City, the Owner shall promptly notify the City and the Parties shall negotiate in good faith an amendment to this Agreement to mitigate any negative impacts, if any, upon the City of such expansion.

O. INSURANCE AND INDEMNIFICATION OF THE CITY

1. Insurance.

(a) The Owner shall maintain in full force and effect the types and amounts of insurance as set forth below, and to the extent permissible by applicable law, the City shall be named as an additional insured under each policy. The Owner shall be responsible for all deductibles related to such insurance. In addition, the City may require commercially reasonable increases in all insurance coverage amounts from time to time as may be appropriate for projects of similar size and complexity.

Type of Coverage	**Requirements**
Commercial General Liability (occurrence form)	Coverage shall include products liability, completed operations, liquor liability, garagekeepers legal liability, damage to rented premises, personal and advertising injury and blanket contractual injury. The policy shall have limits of at least $1,000,000 per occurrence and $2,000,000 per location aggregate for property damage and bodily injury.
Automobile Liability Insurance	$1,000,000 combined single limit coverage each accident. This policy shall include coverage for loss due to bodily injury or death of any person, or property damage arising out of the ownership, maintenance, operation or use of any motor vehicle whether owned, non-owned, hired or leased.
Workers' Compensation	Limits as required by statute in the Commonwealth covering all of the Owner's personnel performing work

Insurance	or services in connection with the Project.
Employers' Liability Insurance	$1,000,000 each accident and each employee for disease.
Umbrella and/or Excess Liability Insurance	$200,000,000 each occurrence/aggregate.
Pollution Legal Liability Insurance	$5,000,000 each occurrence/aggregate. This policy shall provide coverage for third-party bodily injury, property damage, cleanup costs and defense costs that arise in connection with the Project.

(b) Prior to undertaking any activities on the Property, the Owner and any of its authorized representatives shall first provide the City certificates of insurance evidencing all insurance policies that the Owner and any of its authorized representatives (including, without limitation, any architects, engineers, general contractors, subcontractors, and consultants) are required to carry hereunder. All such certificates of insurance shall confirm the specific coverage requirements stated above and shall unequivocally state that should any of the above-described policies lapse, be materially changed, or be cancelled before the expiration date thereof, the issuing insurer shall provide thirty (30) days written notice to the City.

(c) All policies of insurance referred to herein shall be written in a form that is reasonably acceptable to the City and by companies that are authorized to do business in the Commonwealth and having a financial strength rating by A.M. Best Company, Inc. of not less than "A-" or its equivalent from another recognized rating agency. The City, in its sole discretion, may waive or modify one or more of the foregoing insurance requirements if the same are not available on commercially reasonably terms. All policies of insurance shall provide that any act or negligence of the Owner shall not prejudice the rights of the City as a party insured under said policies. If requested by the City in writing, the Owner shall furnish the City with certified copies of the insurance policies required hereunder.

2. Policies Non-Cancelable. The Owner agrees that all policies of insurance referred to herein shall not be canceled or allowed to lapse nor shall any material change be made in any such policy which changes, restricts or reduces the insurance provided, nor shall there be a change in the name of the insured, without first giving thirty (30) days notice in writing to the City.

3. Keep in Good Standing. The Owner shall observe and comply with the requirements of all policies of public liability, fire and other policies of insurance at any time in force with respect to the Project and the Owner shall so perform and satisfy the requirements of the companies writing such policies.

4. Waiver of Subrogation. The Owner hereby waives all rights of recovery against the City and its authorized representatives on account of loss or damage to the Property, and to the extent that the Owner obtains an insurance policy for such loss or damage, the Owner shall cause such policy to be endorsed to waive the insurer's rights of subrogation against the City and its authorized representatives.

5. Indemnity. Upon the Effective Date, the Owner shall defend, indemnify and hold harmless the City, its officers, employees and agents ("Indemnified Parties") against any claims, actions, demands, fines, penalties, costs, expenses, damages, losses, obligations, judgments, liabilities, and suits, including reasonable attorneys' fees, reasonable experts' fees and associated court costs ("Liabilities") that arise from or relate in any way to: (i) the validity of this Agreement and all of this Agreement's individual provisions; (ii) the authority of the City to enter into this Agreement; (iii) the validity of the Ballot Question Election and votes cast at the Ballot Question Election; (iv) any threatened or actual litigation arising from the City's participation in this Agreement; (v) the gross negligence or willful misconduct of the Owner, or any of the Owner's authorized representatives in the performance of any activity, undertaking or obligation arising out of this Agreement; and (vi) any breach of or default under this Agreement by the Owner; provided, however, that the Owner shall not be liable for any losses to the extent caused by the gross negligence or willful misconduct of any one or more of the City or its authorized representatives. The foregoing express obligation of indemnification shall not be construed to negate or abridge any other obligation of indemnification running to the City which would exist at common law or under other provisions of this Agreement, and the extent of the obligation of indemnification shall not be limited by any provision of insurance undertaken in accordance with this Agreement. This indemnification shall survive the termination or expiration of this Agreement for a period equal to the applicable statute of limitations period. If any action or proceeding is brought against the City arising out of any occurrence described in this section, upon notice from the City the Owner shall, at its expense, defend such action or proceeding using legal counsel approved by the City, provided that no such action or proceeding shall be settled without the approval of the City.

P. SECURITY FOR OWNER'S OBLIGATIONS

1. Letter of Credit.

(a) To secure the Owner's obligation under this Agreement to make payments of the Community Impact Fee, upon and following the Opening, (i) the Owner shall deliver to the City an original irrevocable standby letter of credit issued by a major money center bank located within the United States reasonably acceptable to the City in the initial sum of Five Million Dollars ($5,000,000) (the "Letter of Credit"). The Letter of Credit shall be issued in accordance with, and subject to, the International Standby Practices (ISP98) International Chamber of Commerce Publication No. 590 and the rules of the Uniform Customs and Practice for Documentary Credits (1993 Revision), International Chamber of Commerce Publication No. 500, as most recently published and/or updated by the International Chamber of Commerce, or any successor code of standby letter of credit practices generally adopted by the issuing bank as may be in effect at the time of issuance (the "Letter of Credit

Standards").

(b) The Letter of Credit shall be in form and substance acceptable to the City in accordance with the Letter of Credit Standards set forth above. The Letter of Credit shall automatically renew. The Owner shall be obligated to maintain the Letter of Credit for the Term of the Agreement.

(c) During the Term, the Letter of Credit shall be renewed or replaced prior to expiry with either a renewal of the then current Letter of Credit or with a replacement Letter of Credit satisfying the other requirements of this Section, in either case extending the expiry of the Letter of Credit for at least twelve (12) months. At least forty-five (45) days prior to the expiration of the then-current Letter of Credit, the Owner shall notify the City in writing of its intention to deliver an original renewal or a replacement Letter of Credit. The Owner shall deliver an original renewal or a replacement Letter of Credit to the City at least thirty (30) days prior to expiration of the then current Letter of Credit. If a satisfactory renewal or replacement Letter of Credit has not been delivered to the City at least thirty (30) days prior to the expiration of the then current Letter of Credit, the City shall be entitled to draw on the then existing Letter of Credit and shall hold the funds in escrow until such time as a replacement Letter of Credit has been provided to the City. The provisions of this Section shall survive the termination or expiration of this Agreement.

2. Late Payment Penalty. If any portion of any payment due to the City under this Agreement is not received by the City as of the due date for such payment, then such portion shall be deemed overdue and shall bear interest of eighteen percent (18.00%) per month from the date that is five (5) business days after the date of notice by the City to Owner of such late payment until received by the City.

Q. AGREEMENT TO BE A CONDITION OF THE OWNER'S GAMING LICENSE

The Owner shall use reasonable efforts to ensure that full compliance with the terms of this Agreement, including, but not limited to, making timely payments to the City of all amounts due under this Agreement, shall be a binding condition of its Gaming License and that any default by the Owner with respect to this Agreement shall constitute an automatic suspension of the Gaming License, with the Owner's "reasonable efforts" to include, but not be limited to, proposing such a condition in its application for a Gaming License. If such a condition is not included in the Owner's Gaming License, the Owner shall promptly notify the City and the Parties shall negotiate in good faith an amendment to this Agreement to mitigate any negative impacts, if any, upon the City as a result.

R. ENFORCEMENT OF PAYMENTS TO THE CITY

In the event that the Owner fails to make any payment hereunder when due, the Owner agrees (unless the Owner and the City are in good faith disputing whether such payment is due) not to object to or oppose any effort by the City to seek a judgment in a court of competent jurisdiction to enforce a payment default under this Agreement and to obtain a judgment lien against the Property.

S. STATUTORY BASIS FOR FEES

The Owner recognizes and acknowledges that the Community Impact Fee and other payments to the City required by this Agreement: (i) are authorized under Section 15(8) of Chapter 23K and M.G.L. c. 40, § 22F; (ii) are being charged to the Owner in exchange for particular governmental services which benefit the Owner in a manner not shared by other members of society; (iii) will be paid by the Owner by choice in that the Owner has voluntarily entered into this Agreement and is voluntarily seeking a Gaming License; and (iv) will be paid primarily not to provide additional revenue to the City but to compensate the City for providing the Owner with the services required to allow the Owner to construct and operate the Project and to mitigate the impact of the Owner's activities on the City and its residents.

T. COVENANTS OF THE OWNER

1. Affirmative Covenants of the Owner. The Owner covenants that throughout the Term, the Owner shall:

(a) Do or cause to be done all things necessary to preserve, renew and keep in full force and effect its legal existence.

(b) Do or cause to be done all things necessary to preserve, renew and keep in full force and effect a Gaming License, and comply with all legal requirements applicable to the operation of its business and other activities, in all material respects, whether now in effect or hereafter enacted.

(c) Furnish to the City upon the request of the City all financial reports and other such written materials provided by Owner to the Commission or to other municipalities.

(d) Make or cause to be made, annual capital expenditures to the Project consistent with Section 21(a)(4) of the Chapter 23K.

2. License Application. The Owner shall:

(a) Promptly, completely and accurately submit to the Commission its completed response to the Commission's RFA-2 (the "RFA-2 Response"), all other information as the Commission may from time to time require from the Owner in connection with its application for a Gaming License, make all payments required under Chapter 23K to be made by an applicant for a Gaming License and use its best efforts to satisfy all criteria necessary to be issued a Gaming License by the Commission;

(b) Furnish to the City a copy of the RFA-2 Response simultaneous with or immediately following its submission to the Commission and reasonably consult with the City in advance of such submission, as to its content;

(c) Consult with the City prior to making any formal presentation to the Commission concerning its RFA-2 Response; and

(d) Prior to the Commission issuing a Gaming License to the Owner, keep the City informed as to all material contacts and communications between the Commission and its staff and the Owner so as to enable the City to evaluate the likelihood and timing of the Commission issuing a Gaming License to the Owner.

3. Negative Covenant of the Owner. The Owner covenants that throughout the Term, the Owner shall not declare or pay any dividends, payments or distributions to any members or shareholders of the Owner upon the occurrence of default of any payment to the City required under this Agreement until such default is cured.

4. Confidentiality of Deliveries. To the extent that Chapter 23K other laws of the Commonwealth, in the reasonable opinion of the City, allow confidential treatment of items Owner is obligated to furnish to the City, the City agrees to keep such items confidential (for so long as they are entitled to confidential treatment) and shall not disclose them except (i) to such City officials and consultants on a need-to-know basis; and/or (ii) pursuant to a court order. Further, to the extent that the Owner requests confidential treatment of any documentation or information required to be provided to the City under this Agreement, and such documentation and information may be protected from disclosure by the City under applicable law, the City shall maintain such documentation and information confidential to the extent permitted by applicable law. In the event that the City is not able to assure the confidential treatment of any of any of the items required under this section, then Owner may satisfy its obligations under this section by making such items available for in-person review and inspection by the City without obligation to deliver printed copies to the City.

U. REPRESENTATIONS AND WARRANTIES OF THE OWNER

The Owner represents and warrants to the City that each of the following statements is true and accurate as of the Effective Date:

1. The Owner is a duly formed limited liability company organized under the laws of the Commonwealth of Massachusetts and is in good standing and qualified to do business under the laws of the Commonwealth of Massachusetts;

2. The Owner has taken all actions required by law to approve the execution of this Agreement;

3. The Owner's entry into this Agreement and/or the performance of the Owner's obligations under this Agreement do not violate any contract, agreement or other legal obligation of the Owner;

4. The Owner's entry into this Agreement and/or the performance of the Owner's obligations under this Agreement do not constitute a violation of any state or federal statute or judicial decision to which the Owner is subject;

5. There are no pending lawsuits or other actions or proceedings which would prevent or impair the timely performance of the Owner's obligations under this Agreement;

6. The Owner has the legal right, power, and authority to enter into this Agreement and to consummate the obligations contemplated hereby, and the execution, delivery and performance of this Agreement have been duly authorized and no other action by the Owner is requisite to the valid and binding execution, delivery, and performance of this Agreement, except as otherwise expressly set forth herein, and this Agreement is enforceable against the Owner;

7. The individual executing this Agreement on behalf of the Owner is authorized to execute this Agreement on behalf of the Owner; and

8. This Agreement is binding on the Owner and is enforceable against the Owner in accordance with its terms, subject to applicable principles of contract, equity and insolvency laws.

SECTION 3. RESPONSIBILITIES AND UNDERTAKINGS BY THE CITY

A. BINDING VOTE ON A BALLOT QUESTION

Upon the Owner's request (the "Election Request"), the City shall schedule the Ballot Question Election. In accordance with and subject to the provisions of Section 15(13) of Chapter 23K, the City shall hold the Ballot Question Election not less than sixty (60) days but not more than ninety (90) days from the date that the Owner's request for the Ballot Question Election is received by the City.

B. LOCAL PERMITTING

To the extent permissible by law, the City (i) agrees to expedite all permitting, zoning relief and other entitlements necessary for the Owner's development of the Project (and all future phases of the Project), (ii) commits to support tax incentive financing for the Owner or any of its affiliates in connection with the development or redevelopment of any land owned by the Owner or any of its affiliates in the City, including Wonderland, so long as such development is not a part of the Project, (iii) agrees to expedite all permitting, zoning relief and other entitlements necessary for the Owner's affiliate's future development of Wonderland, and (iv) commits to support infrastructure investment incentive financing for the development or redevelopment of any land owned by the Owner or any of its affiliates in the City, including Wonderland, so long as such development is not a part of the Project.

C. EXCLUSIVITY

During the term of this Agreement, the City shall not sign another Host Community Agreement with any other gaming license applicant, gaming licensee or owner of a gaming establishment other than the Owner and will only enter into a Surrounding Community Agreement relating to another Applicant if required by the Commission. To the extent permissible by law, the City (i) shall support the Owner's application for a Category 1 License for the Project as the sole application within the City for a license to operate any gaming establishment, and (ii) shall not support the application or proposal of any other person to obtain a license to operate any gaming establishment.

D. SUPPORT FOR THE PROJECT

To the extent permissible by law, the City shall informally advise the Owner concerning, and shall actively cooperate with and publicly support, the Owner's efforts to obtain from the appropriate municipal, state and federal bodies and agencies, all such permits, licenses and approvals as may be necessary to carry out the Project, including without limitation the Owner's Gaming License.

E. ZONING AMENDMENTS

The City wishes to encourage the Owner to develop additional future phases of the Project on the Revere Property for the purpose of generating additional tax revenue and creating further jobs and economic development. To facilitate such future possible development, the City shall cause the Mayor to file and support zoning amendments as may be requested by the Owner.

F. REPRESENTATIONS AND WARRANTIES OF THE CITY

The City represents and warrants to the Owner that each of the following statements is true and accurate as of the Effective Date:

1. The City is a validly existing municipal corporation and has all requisite power and authority to enter into and perform its obligations under this Agreement, and all other agreements and undertakings to be entered into by the City in connection herewith;

2. This Agreement is binding on the City and is enforceable against the City in accordance with its terms, subject to applicable principles of equity and insolvency laws;

3. The City's entry into this Agreement and/or the performance of the City's obligations under this Agreement do not violate any contract, agreement or other legal obligation of the City;

4. The City's entry into this Agreement and/or the performance of the City's obligations under this Agreement do not constitute a violation of any state or federal statute or judicial decision to which the City is subject;

5. There are no pending lawsuits or other actions or proceedings which would prevent or impair the timely performance of the City's obligations under this Agreement; and

6. The individual executing this Agreement on behalf of the City is authorized to execute this Agreement on behalf of the City.

SECTION 4. GENERAL PROVISIONS

A. RECITALS

The Recitals set forth above are incorporated herein by reference as though fully set forth herein.

B. BINDING AGREEMENT

This Agreement is binding upon and enforceable against, and inures to the benefit of, the Parties hereto and their successors and assigns (including, without limitation, any successor owner or owners of the Project, but excluding mortgagees of the Project or those claiming through mortgagees of the Project, unless said mortgagee obtains title to the Property and proceeds with the development of a gaming establishment on the Property). This Agreement shall remain binding upon and enforceable against the Parties hereto and their successors and assigns in the event that the Commission, some other duly authorized governmental agency or a court of competent jurisdiction determines that the City is not a Host Community for the purposes of Chapter 23K.

C. REGULATIONS OF THE COMMISSION

The Parties shall negotiate in good faith an amendment or amendments to this Agreement to incorporate any terms, provisions or subjects required to be included in this Agreement by the Commission or to make any provision of this Agreement consistent with the Commission's regulations or policies.

D. NO LIABILITY FOR APPROVALS AND INSPECTIONS

No approval to be made by the City under this Agreement or any inspection of the Project by the City shall render the City liable for failure to discover any defects or non-conformance with this Agreement, or a violation of or noncompliance with any federal, Commonwealth or local statute, regulation, ordinance or code.

E. TIME IS OF THE ESSENCE

All times, wherever specified herein for the performance by the Owner of its obligations hereunder, are of the essence of this Agreement.

F. NO PARTNERSHIP

No relationship between the City and the Owner of partnership or joint venture is intended to be created hereby, and any such relationship is hereby disclaimed.

G. RECORDING

The Parties shall cooperate in recording and filing a copy of a customary form of notice of agreement with the Suffolk County Registry of Deeds and Suffolk County Registry District of the Land Court. Upon the termination of this Agreement, the Parties shall cooperate in recording and filing a customary form of a notice of termination of notice of agreement with the Suffolk County Registry of Deeds and Suffolk County Registry District of the Land Court. The

costs of recording the notice of agreement and notice of termination of notice of agreement shall be paid by the Owner.

H. TRANSFER OF INTERESTS

The Owner shall have continually the right to grant a mortgage or mortgages on all or any portion of the Property, and to transfer its interest herein to any such mortgagee, to the purchaser at a foreclosure sale or otherwise in connection with the exercise of remedies under any such mortgage. In addition, the Owner shall have the right to transfer or assign its rights and interests under this Agreement, provided that:

(i) at the time of such transfer or assignment, the Owner has made all payments then due and payable under this Agreement;

(ii) if a Gaming License has been issued for the Project or any portion of the Property, the transfer or assignment is in connection with a transfer or assignment of such Gaming License and such transfer or assignment is permitted or has been approved pursuant to Chapter 23K;

(iii) the successor or assignee shall expressly assume and agree to perform and comply with all of the covenants and agreements of this Agreement to be performed by the Owner; and

(iv) the Owner shall deliver to the City prior to or promptly after such transfer or assignment, a copy of the instrument or instruments evidencing any such assignment to and assumption by the successor or assignee.

The liability of the Owner or its successors or assigns (including, without limitation, mortgagees) arising under this Agreement shall be limited solely to the interests of the Owner in the Project, and no trustee, officer, director, manager, member, owner, agent, representative or employee of the Owner, or their respective successors or assigns, or any person or entity directly or indirectly holding any interests in any of the foregoing from time to time, or any such person's or entity's separate assets or property shall have or be subject to any personal or individual liability with respect to any obligation or liability hereunder, nor shall any person or entity be answerable or liable hereunder in any equitable proceeding or order beyond the extent of its interest in the Project. No holder of a mortgage on any or all of the buildings or portions of the Project, as the case may be, shall be liable to perform, or be liable in damages for failure to perform, any of the obligations of the Owner hereunder unless and until such holder acquires title to the Project by foreclosure or deed in lieu of foreclosure and pursues the completion of the Project in accordance with the provisions hereof.

I. REPRESENTATIVES AND AGENTS NOT INDIVIDUALLY LIABLE

No member, official, employee, agent, or other authorized representative of the City shall have any personal interest, direct or indirect, in this Agreement, nor shall any such member, official, employee, agent, or representative participate in any decision relating to this Agreement

which affects his or her personal interests or the interests of any corporation, partnership, or association in which he or she is, directly or indirectly, interested. No member, official, employee, agent, or other authorized representative of the City shall be personally liable to the Owner, or any successor in interest, in the event of any default or breach by the City or for any amount which may become due to the Owner or its successor or on any obligations under the terms of this Agreement. No stockholder, member, indirect or direct owner, director, manager, officer, employee, agent, or other authorized representative of the Owner or of Caesars Massachusetts Management Company, LLC shall be personally liable to the City, or any successor in interest, in the event of any default or breach by the Owner or for any amount which may become due to the City or its successor or on any obligations under the terms of this Agreement.

J. NOTICES

All notices and other communications required or permitted under this Agreement shall be in writing, signed by a duly authorized officer or representative of the City or the Owner, as the case may be, and shall be (i) delivered by nationally recognized overnight delivery service, or (ii) mailed by certified or registered mail, return receipt requested, postage prepaid, to the Parties at the following addresses or such other addresses as each may have specified to the other by such a notice:

City:
Mayor of Revere
Office of the Mayor
281 Broadway
Revere, Massachusetts 02151
Attention: The Honorable Daniel Rizzo

with copies to:
City of Revere City Solicitor
Office of the City Solicitor
281 Broadway
Revere, Massachusetts 0151
Attention: Paul Capizzi, Esq.

And

Mirick, O'Connell, DeMallie & Lougee, LLP
100 Front Street
Worcester, Massachusetts 01608
Attention: Brian R. Falk, Esq.

Owner:
Sterling Suffolk Racecourse, LLC
525 McClellan Highway
East Boston, Massachusetts 02128
Attention: William J. Mulrow

with a copy to: DLA Piper LLP (US)
33 Arch Street, 26th Floor
Boston, Massachusetts 02110
Attention: Charles A. Baker III, Esq.

Any such notice shall be deemed to have been given on the date received or refused during normal business hours. The City specifically acknowledges that the Owner may change its designated street address.

K. SEVERABILITY

If any term or provision of this Agreement, or the application thereof to any person or circumstance, shall to any extent be determined to be invalid and unenforceable, the remainder of this Agreement, or the application of such terms to persons or circumstances other than those to which it is invalid or unenforceable, shall not be affected thereby, and each term and provision of this Agreement shall be valid and shall be enforced to the extent permitted by law; provided, however, that the City shall have the right to seek special legislation in order to validate any term or provision of this Agreement.

L. GOVERNING LAW

This Agreement shall be governed and construed by the laws of the Commonwealth of Massachusetts, without regard to conflict of law principles.

M. AMENDMENTS

This Agreement may be amended only by a written instrument signed by the Parties.

N. TERM

The term of this Agreement shall commence on the Effective Date and expire on the earlier of (a) the expiration or earlier termination of the Owner's Gaming License, including any extensions or renewals thereof, and subject to any assignment or reissuance thereof to a successor owner or operator of the Project; (b) the date on which the Owner notifies the City that the Owner has been rejected as an applicant by the Commission during any phase of the Commission's licensing process, with any appeals having been decided against the Owner and/or all appeal periods applicable to the licensing process having expired; or (c) the date on which Owner notifies the City that an applicant other than the Owner has received a "Category 1 License" for so called "Region A" , as those terms are defined and used in Chapter 23K, with all appeals having been decided in that applicant's favor and/or all appeal periods applicable to the license having expired, provided that (i) the Owner has not previously been awarded a Category 1 License for Region A, (ii) the Owner has not previously been awarded any other gaming license from the Commission, and (iii) the Owner is not an applicant for any other gaming license from the Commission.

If this Agreement is terminated or expires pursuant to the terms hereof, then the Owner is relieved from all obligations under this Agreement, excepting therefrom any obligations that by their terms expressly state they shall survive expiration or termination of this Agreement.

O. EXECUTION IN COUNTERPARTS / MULTIPLE ORIGINALS

This Agreement may be executed in counterparts. All such counterparts shall be deemed to be originals and together, shall constitute but one and the same instrument. The Parties have agreed to execute multiple original copies of this Agreement.

P. ENFORCEMENT

It is the intention of the Parties that the provisions of this Agreement may be enforced only by the Parties hereto, and that no other person or persons shall be authorized to undertake any action to enforce any provisions hereof without the prior written consent of the Parties. Notwithstanding the preceding sentence, the Commission may enforce this Agreement to the extent that this Agreement shall be a binding condition of the Owner's Gaming License.

Q. DISPUTE RESOLUTION

1. Unless an alternative means of dispute resolution is mutually elected by both of the Parties as provided herein, the Parties reserve the right, either in law or equity, by suit, and complaint in the nature of specific performance, or other proceeding, to enforce or compel performance of any or all provisions of this Agreement.

2. The Parties may seek to resolve a dispute regarding this Agreement (a "Dispute") pursuant to Sections 4.Q.2 through 4.Q.6 of this Agreement if (i) a Party gives a written dispute notice to the other Party referencing Sections 4.Q.2 through 4.Q.6 and setting forth the grounds for the Dispute (a "Dispute Notice"), and (ii) the Party receiving the Dispute Notice gives written notice to the other Party consenting to resolve the dispute pursuant to Sections 4.Q.2 through 4.Q.6.

3. Within ten (10) days of the date of the Dispute Notice, the Parties shall meet to negotiate in good faith to resolve the Dispute described in the Dispute Notice.

4. In the event that a Dispute is unresolved within sixty (60) days of the date of a Dispute Notice, such Dispute shall be submitted for arbitration by a single arbitrator (the "Arbitrator") qualified the American Arbitration Association (the "AAA"). The Dispute shall be arbitrated in Boston, Massachusetts, before an arbitrator selected pursuant to the AAA's arbitration selection process. Upon such Dispute being submitted to the AAA for resolution, the AAA and the arbitrator shall assume exclusive jurisdiction over the Dispute. The proceedings before the Arbitrator shall be governed by the rules and regulations of the AAA, and the award and determination of the Arbitrator shall be binding and conclusive upon the Parties, and the Parties herewith agree to abide by the Arbitrator's determination.

5. The arbitrator in arriving at his decision shall consider the pertinent facts and circumstances as presented in evidence and be governed by the terms and provisions of this Agreement and applicable law. To the extent any provisions of this Agreement are inconsistent with the AAA Rules, this Agreement shall control.

6. The arbitrator shall not have authority to make an award of equitable relief.

R. CERTIFICATION OF TAX COMPLIANCE

Pursuant to M.G.L. c. 62C, § 49A, the Owner by its duly authorized representative, certifies under penalties of perjury that it has complied with all laws of the Commonwealth of Massachusetts relating to taxes, reporting of employees and contractors, and withholding and remitting of child support.

S. COMPLIANCE REQUIREMENT

Notwithstanding anything in this Agreement to the contrary, and in good faith to remain consistent with all of the terms of this Agreement and in consultation with the City, Owner's obligations hereunder shall be subject to and consistent with (a) the requirements and limitations on the Owner as set forth in this Agreement, and (b) any applicable orders, injunctions, rules, policies or other directives given to the Owner by the Commonwealth of Massachusetts, the Commission, or any other governmental body, agency, authority or commission.

[Signatures to follow on the next page.]

IN WITNESS WHEREOF, the Parties hereto have caused this instrument to be executed in their behalf by their respective officers thereunto duly authorized as of the day and year first above written.

[Reserved]

Exhibit B

Boardman Street FlyOver

Four intersections are treated as one in the proposed Project construction program. The proposed improvements include construction of a northbound Route 1A overpass bridging the Boardman Street intersection, meeting grade to the south of Waldemar Avenue. At Waldemar Avenue, a traffic signal would be installed allowing controlled movement between the Route 1A northbound through movement from the overpass and vehicles on an adjacent northbound frontage road serving vehicles proceeding northbound from the Boardman Street corridor. The Route 1A corridor width approaching this traffic signal would be five lanes, one of which would be set for movement to Waldemar Avenue. Continuing northbound, the intersection of Tomasello Drive (a private way) and Route 1A would be signalized with four northbound lanes provided, one of which will be for right turns into Tomasello Drive. The three remaining lanes will continue northerly several hundred feet through an upgraded traffic signal referred to as the "Jughandle" (at or near the Boston/Revere City Line) where the existing traffic signal would be upgraded and then the third lane would be dropped, tapering the existing two northbound lanes north of the Jughandle in Revere. Southbound, two through lanes would be maintained approaching the Jughandle, and extend through the Tomasello Drive intersection. Two additional left turn only lanes would be added approaching Tomasello Drive for access to the Project. The Route 1A SB corridor would then be widened to three through lanes from Tomasello Drive southerly to and through the Boardman Street intersection, extending for a distance several hundred feet beyond the Boardman Street intersection and then taper to two lanes. A fourth lane will be provided approaching Boardman Street for left turns under the flyover to access Orient Heights and U-turns on the southbound approach to the new northbound frontage road.

All of the associated widening required for this work will be completed on the easterly side of the Route 1A corridor. Boardman Street westbound will be widened to allow for three lanes to approach Route 1A, consistent with the proposal advanced as part of the proposed hotel development at the intersection of Route 1A and Boardman Street. Waldemar Avenue will be maintained as one lane in each direction. Tomasello Drive will be widened to provide two lanes departing from Route 1A (entering the Project), and four lanes approaching Route 1A (exiting the Project - three for left turns and one for right turns). This plan is subject to the approval of MassDOT, City of Boston Transportation Department (BTD) and the City of Boston Public Improvement Commission (PIC).

Route 1A Boardman to Jughandle – Planning

The Owner will study in the Draft Environment Impact Report and Expanded Public Notification Form to be filed for the Project the segment of Route 1A to the Jughandle. The study will be in the nature of a long-range plan for this highway segment based on current needs and following on the long range plans for this area developed in the North Shore Transportation Study by the Central Transportation Planning Staff. The plan is limited to a study of the merits of the design and does not include a full review of the environmental planning process nor final design plans.

Exhibit C

Route 1/Route 16 Intermediate Improvements

The improvements are intended to provide missing movements to an important regional highway access point. Under existing conditions, access from Route 1 SB to Route 16 EB and from Route 16 WB to Route 1 NB are not provided, and there is redundant ramp access from Route 16 WB to Route 1 SB provided less than 1,500 feet from the existing interchange, or approximately 600 feet west of Webster Avenue. The proposed build condition would include closure of the Route 16 WB access to Route 1 SB within the existing interchange and a diversion of that movement farther to the west beyond Webster Avenue. The current on/off ramp configuration to and from Route 1 SB would become a four lane off ramp to Route 16 East and west with a median break on Route 16 and installation of a traffic signal. This ramp will provide the opportunity to significantly reduce left lane and left/U-turn congestion at the Route 16/Webster Street intersection. The on-ramp to Route 1 NB from Route 16 WB would be developed with a second Route 16 median break on the easterly side of Route 1 together with construction of a left turn lane, The left turn movement to Route 1 NB would be signal controlled and would tie into the existing EB to NB loop ramp through an open in-field area. Both signals would operate in two phases (Route 16 east and west and the Route 1 SB off at the off-ramp location and the eastbound through and westbound left to Route 1 NB at the second site). Note that there would be no stopping of the westbound through movement at the proposed signal to the northbound on-ramp movement. The interchange work would also include an update the Route 16, Webster Avenue, Garfield Avenue intersection, and pavement area reduction where acceleration lanes are no longer required. The improvements are subject to the approval of DCR, MassDOT, and cities of Revere and Chelsea.

Exhibit D

Blue Line Access /Construct Suffolk Downs Station upgrades

Discussions with the MBTA regarding the specific improvements to be made to Suffolk Downs Station remain preliminary and subject to change. At this point in the negotiation, the proposed improvements consist of the following concepts:

- Maintenance Improvements: The proposed improvements include concrete restoration and repair of the existing structure, ramps, stairs, overpass and platform. The existing structure will also be repainted;
- Elevators: The proposed improvements include installation of 2 new ADA compliant elevators, together with the associated foundations, structure and improvements;
- Turnstiles: The proposed improvements include installation of 3 new turnstiles at the station;
- Site Improvements: The proposed improvements include installation of new sidewalks, ramps, railings, lighting, way finding ($50,000 allowance) and landscaping from the station to the entrance to the Project. A pedestrian shelter will be provided at the entrance to the Project.

The Owner shall ensure that should work continue at this MBTA station after the first Impact Fee Year, the Owner shall ensure full functionality and a clean and safe environmental for patrons with adequate wayfinding signage.

These improvements are subject to the MBTA's approval.

Bicycle Access – Provide Bike Lanes on Bennington Street

These improvements call for a "Constitution Beach to Revere Beach" bicycle connection. Bicycle lanes will be marked along the Bennington Street corridor from Saratoga Street in East Boston to Winthrop Parkway in Revere. The bicycle route will start at the northerly end of Constitution Beach Park, proceed northerly along Barnes Avenue (shared lanes) to Saratoga Street, and follow Saratoga Street easterly to Bennington Street also as a shared lane given width limitations on Saratoga Street over the MBTA Blue Line. From Saratoga, to the Boston/Revere City Line, a five foot minimum bicycle lane will be provided with one lane established for through movement northbound. Parking will generally be permitted along the curb line, except approaching the Bennington Street, Leyden Street Walley Street extended intersection area where two travel lanes will be designated, one for left turns and one for through movement. Within an area from 250 feet south of Leyden Street through Palermo Street, parking will be restricted. Parking restrictions, and/or painted median area or two-way left turn lane (TWLT lane) will be considered from Leverett Avenue to the Boston/Revere City Line. Southbound from the Revere/Boston City Line to the Suffolk Downs T Station parking will be restricted (matching northbound). Southerly from the T Station, one travel lane will be maintained with on street parking and the bicycle lane to an area between Ashley and Antrim Streets, where lane

sharing will be provided to Saratoga Street. Initial plans in Revere would provide for a three lane corridor (one through/right lane in each direction with a two-way center left turn lane) with parking both sides at the curb and five foot minimum turn lanes from the City Line to Crescent Street. From Crescent Street to Winthrop Avenue, lanes would be shared in both directions. From Winthrop Avenue to Winthrop Parkway, one travel lane would be removed, maintaining one travel lane, parking and the bicycle lane. Approvals will be required from the Cities of Boston and Revere, as well as MassDOT and DCR.

Exhibit E

The Owner's Quality Job Creation and Employment Commitments

The Owner shall impose a local hiring program for both construction and permanent jobs at the Project that will include the following components:

Construction Jobs:

- Host and maintain a central job bank website (in English and Spanish) as a micro-site within the larger Project website.
- The Owner shall demonstrate to the City its efforts to provide construction employment opportunities to City residents.
- The Owner will utilize best efforts to use the existing labor force in the Commonwealth, and in particular the existing labor force in the City, when hiring for new construction jobs, as required by Chapter 23K.
- During the Term of this Agreement, the Owner will hold job fairs at the Property to make City residents aware of job opportunities available at the Project.
- In furtherance of specific goals for the utilization of minorities, women and veterans on construction jobs, the Owner shall send to each labor union or representative of workers with which the Owner has a collective bargaining agreement or other contract or understanding, a notice advising the labor union or workers' representative of the Owner's commitments, as required by Chapter 23K.

Permanent Jobs:

- Establish, fund and maintain human resource hiring and training practices that promote the development of a skilled and diverse workforce and access to promotion opportunities through a workforce training program that: (i) establishes transparent career paths with measurable criteria within the gaming establishment that lead to increased responsibility and higher pay grades that are designed to allow employees to pursue career advancement and promotion; (ii) provides employee access to additional resources, such as tuition reimbursement or stipend policies, to enable employees to acquire the education or job training needed to advance career paths based on increased responsibility and pay grades; and (iii) establishes a program or partnership to provide off-site child day-care, all as required by Chapter 23K.
- Host and maintain a central job bank website (in English and Spanish) as a micro-site within the larger Project website.
- The Owner will provide City residents with advance notice of hiring activities by publishing announcements in local newspapers approximately four (4) to eight (8) consecutive weeks prior to initial hirings.

- Residents of the City (together with residents of host and surrounding communities (as defined in Chapter 23K)) will be given first priority to apply for jobs during a specified "advance period," such advance period to be established jointly by the Owner and the City.

- Written flyers in English and Spanish will be distributed to local community-based organizations in the City to inform people about local advance period hiring and the Owner shall use best efforts to otherwise notify residents in the low income neighborhoods in the City proximate to the Project of potential job opportunities.

- The Owner maintain a minimum of two (2) computers on-site to ensure that residents without computers can research and apply online for jobs at the Project.

- During the Term of this Agreement, the Owner will hold job fairs at the Property to make City residents aware of job opportunities available at the Project.

- The Owner will utilize best efforts to use the existing labor force in the Commonwealth, and in particular the existing labor force in the City, when hiring for new jobs, as required by Chapter 23K.

- The Owner will make best efforts to ensure that ten percent (10%) permanent employees at the Project are City residents, as more particularly set forth in the Agreement.

- In furtherance of specific goals for the utilization of minorities, women and veterans permanent jobs, the Owner shall send to each labor union or representative of workers with which the Owner has a collective bargaining agreement or other contract or understanding, a notice advising the labor union or workers' representative of the Owner's commitments.

- During the Term of this Agreement, the Owner shall use best efforts to work with the City's schools to establish school to work programs for hospitality jobs.

- During the Term of this Agreement, the Owner shall support the efforts of and actively engage with the Commission and community colleges to develop the Massachusetts Community College Workforce Training Institute and Massachusetts Casino Careers Training Institute at community colleges in the Commonwealth.

- During the Term of this Agreement, upon request by the City, the Owner shall provide the Community Advisory Board with information regarding its contracts with organized labor, including hospitality services, the number of employees employed at the gaming establishment, including detailed information on the pay rate and benefits for employees and contractors, and the Owner's plans to ensure labor harmony during all phases of the construction, reconstruction, renovation, development and operation of the gaming establishment.

- Consistent with the corporate policy of the Owner to provide equal opportunity for all applicants and employees, the Owner will not discriminate on the basis of race, color,

religion, sex, national origin, age, disability, sexual orientation, gender identity or expression, or veteran status. This policy applies to all areas of employment including recruitment, hiring, training, promotion, compensation, benefits, transfers and social and recreational programs.

The Owner shall implement a training and development program for permanent jobs at the Project that will include the following components:

- Provide opportunities for team members to pursue personal and professional growth, to enjoy satisfying careers, to participate in training and development programs and to celebrate success including rewards and recognition for superior performance against measurable goals.

- Provide new employees with learning programs such as the "Empire Series." The Empire Series is Caesars' best-in-class and award winning learning program for all new employees. This program offers a lively and engaging environment that uses cutting-edge technology. In addition to such learning program, the Owner shall provide specialized training courses customized to meet employee learning needs.

- If a position requires serving alcoholic beverages, authorizing complimentary alcoholic beverages, or managing a food and beverage operation, that employee must obtain an alcohol awareness certification card. All table games employees, valet attendants, limo drivers and security team members must also possess this certification.

- Provide an educational assistance program that reimburses employees ninety percent (90%) of tuition costs up to a maximum of $3,000 per year for pre-approved undergraduate classes or up to a maximum of $4,000 per year for pre-approved graduate study at an accredited college or university.

- Provide regulatory and compliance training such as Skillsoft, which is Caesars' online learning platform used to deliver all regulatory and compliance training in addition to numerous professional development courses.

- Implement the Caesars Code of Commitment, which includes a commitment to all employees to treat them with respect and provide satisfying career opportunities to invest in employees by providing excellent pay and valuable benefits, including health insurance and a retirement plan, and to share financial success through bonuses for frontline employees, to encourage professional and personal growth through tuition reimbursement, on-the-job training, career development, and promotion from within, to actively seek and respond to employee opinions on all aspects of their jobs, from the quality of their supervisors to the quality of the casinos, and to value employees from every possible background, and who approach issues and problems from different perspectives.

1.0 Purpose and Approach

Sterling Suffolk Racecourse, LLC proposes to redevelop the Suffolk Downs racetrack property straddling East Boston and Revere, Massachusetts as "Caesars Resort at Suffolk Downs," a gaming venue of two casinos with associated improvements, including hotels, entertainment space, restaurants and retail space (the Project). The purpose of this paper is to assess the viability of including water transportation from the downtown Boston and Seaport waterfronts as a component of public transportation to the Project site. This paper does not address transportation in conjunction with entertainment motifs, such as harbor cruises with a final destination being the Project site, although the information presented herein may offer insight to the potential for such operations.

The viability of any transportation system depends upon several key components, not the least of which includes reliability, comfort, and accessibility of the system, and the coincident reliability, comfort, and accessibility of any necessary interconnections. Of equal importance is the convenience of the system and the ability of the system to offer a more direct and timely connection than alternative modes of transportation. The following paper presents an overview of the existing Boston Inner Harbor water transportation infrastructure in relation to the proposed Project, and offers a preliminary assessment of the potential to utilize and/or expand such infrastructure in support of transportation to and from the Caesars Resort at Suffolk Downs.

2.0 Project Summary

Sterling Suffolk Racecourse, LLC proposes to redevelop the 161-acre Suffolk Downs racetrack property straddling East Boston and Revere, Massachusetts as "Caesars Resort at Suffolk Downs," a gaming venue of two casinos, more than 300 guestrooms, a multi-purpose entertainment space, dedicated covered parking, fine dining, bars and retail space. Specific Project elements include:

- Two hotels of approximately 300 and 150 rooms, respectively;
- entertainment venues;
- up to 10 restaurants, including six fine dining concepts, food court, and sports bar;
- approximately 200,000 square feet of gaming space containing 4,000 to 5,000 slot machines, 200 table games, and a World Series of Poker™ room;
- approximately 30,000 square feet of retail space; and
- a 2,500-space, seven-story parking garage and 2,100-space surface parking lot.

The Project also incorporates continued operations at the Suffolk Downs racetrack.

2.1 Project Setting

The site of the proposed Caesars Resort at Suffolk Downs is shown on Figure 1, *Aerial Locus Map*. Of the 161 acres comprising the site, approximately 116 are located in Boston and 45 are located in Revere. The site is bordered to the west by the Global Revere fuel yard and terminal and the McClennan Highway (Route 1A), to the south by the Orient Heights residential neighborhood, to the west by properties fronting Bennington Street, and to the north by Winthrop Avenue and the Revere Beach Parkway.

The primary access point to the site is from Route 1A via Tomesello Road at the southwest corner of the property, with a secondary access point from the Winthrop Avenue/Revere Beach Parkway intersection at the northeast end of the property. The site is also served by two Massachusetts Bay Transportation Authority (MBTA) Blue Line rapid transit system stops; specifically the Suffolk Downs Station at the southeast corner of the property and the Beachmont Station at the northeast end of the property. As discussed below, these stations are also served by MBTA buses.

While not abutting the site directly, Chelsea Creek is located approximately 500 feet to the west of Route 1A, opposite the site's main entrance. Chelsea Creek is a navigable waterway that extends northward from Boston Inner Harbor to a point northwest of the site. Meanwhile, the Belle Isle Marsh, a tidal marsh associated with the Boston Harbor estuarine system is located immediately to the east of the site opposite Bennington Street. While tidal creeks within the marsh are navigable by small craft such as kayaks and canoes, most of these creeks lie above mean low water and are therefore exposed mud flats for significant portions of the tidal cycle. The Belle Isle Marsh has been designated as the Rumney Marshes Area of Critical Environmental Concern (ACEC) by the Massachusetts Secretary of the Executive Office of Energy and Environmental Affairs. Intertidal waters are found at the inlet to the Belle Isle Marsh at Saratoga Street in Winthrop, approximately 3,000 feet south of the site, as discussed below.

2.2 Potential Water Access Routes

The Project site does not directly abut a waterway of a scale that could support commercial water transportation access directly to the site. However, there are essentially three routes to the Project site that could potentially incorporate water transportation for a segment of the access routes from the downtown Boston and Seaport waterfronts. These include Chelsea Creek, Boston Inner Harbor (the Logan Airport Dock and the Boston Harbor Shipyard & Marina), and the Orient Heights / Belle Isle embayment north of Logan Airport. As noted above, Chelsea Creek, and to a lesser degree the Orient Heights / Belle Isle embayment, are located within relatively close proximity to the Project site. Meanwhile, the Boston Inner Harbor routes to the Logan Airport Dock and the Boston Harbor Shipyard & Marina offer a direct connection across the Boston Inner Harbor via existing water transportation routes, but a longer landside connection to the Project site. The water segments for each of these routes are shown on Figure 2, *Potential Water Transportation*

Routes, Figure 3, *Potential Water Transportation Routes (via Chelsea Creek and Boston Inner Harbor)* and Figure 4, *Potential Water Transportation Routes (via Orient Heights / Belle Isle Embayment)* and are reviewed below.

2.2.1 Chelsea Creek (River)

The Route 1A entrance to the Project site lies within 500 feet of the navigable sections of Chelsea Creek. Chelsea Creek is heavily utilized by commercial/industrial maritime traffic associated with the many fuel tank farms located along its banks. It includes a designated federal channel which extends from the Boston Inner Harbor to a point immediately west of the Project site. The federal channel in Chelsea Creek is part of the existing Boston Harbor navigation project which, as described by the US Army Corps of Engineers, calls for a channel 38 feet deep and generally 175 feet to 225 feet wide from the mouth of Chelsea Creek at the head of the Boston Inner Harbor to the Chelsea Street Bridge, and 250 to 430 feet wide above the bridge, with a maneuvering basin 35 feet deep and generally 800 feet wide by 1,000 feet long at the channel's terminus.[1] The Creek and the lands east to the McClennan Highway (Route 1A) have been designated as Designated Port Area (DPA) by the Massachusetts Office of Coastal Zone Management.

The actual width of Chelsea Creek is often twice that of the channel, but depths quickly become quite shallow away from the dredged channel. Extensive intertidal mud flats are found on either side of Chelsea Creek, and particularly within any of the small embayments located off the main stem of the channel (see Figure 3).

2.2.2 Boston Inner Harbor

The Boston Inner Harbor is serviced by numerous water taxi and/or water ferry docks on the downtown Boston and South Boston Seaport side of the Harbor, but by only two such facilities on the East Boston, or Project side, of the Harbor. For the purpose of consistent analysis, the multiple ferry and water taxi docks of the Long Wharf/Central Wharf area are utilized herein as representing the Boston starting point for potential water transportation service to the Project site. However, given the relative proximity of the many piers of the downtown Boston waterfront, the results of this analysis would be similar for any starting location between approximately Lewis Wharf on the downtown Boston waterfront and the World Trade Center in the Seaport section of South Boston.

While there are numerous water taxi and/or water ferry docks on the downtown Boston and South Boston Seaport side of the Harbor, only two such water transportation docking facilities are located on the East Boston, or "Project side" of the Harbor. These are the

[1] Department of the Army, New England Division, Corps of Engineers, Project Maps, Boston Harbor, 30 September 1986. Note: The USACOE is currently in the process of evaluating a proposed increase in the depth of the Chelsea River navigation channel from the current 38-foot depth to 40 feet.

MBTA water transportation landing at the Logan Airport Dock on Harborside Drive and the water taxi dock at the Boston Harbor Shipyard & Marina (see Figures 2 and 3). Each of these East Boston facilities are located only a mile or less from the downtown Boston and Seaport waterfronts and approximately two miles south of the entrances to the Project site. These facilities offer established waterfront infrastructure on the Project side of the Harbor. However, the potential exists for the establishment of other such landings along the East Boston waterfront at underdeveloped or undeveloped piers, and in particular those located closer to the existing public transportation system, as discussed below.

2.2.3 Orient Heights / Belle Isle Embayment

The Orient Heights / Belle Isle embayment lies approximately 3,000 feet south of the Winthrop Street entrance to the Project site. While only two and one half miles northeast of the Boston waterfront in a straight line, by water route the embayment is almost eight miles from the downtown Boston and Seaport waterfronts (see Figure 4). The embayment is accessed by way of Boston Harbor and channels leading around the Governor Island Flats and the Logan Airport runway safety lights, across the mouth(s) of Winthrop Harbor and through the Belle Isle narrows between the Town of Winthrop and Logan Airport runways. Charted water depths are generally 10 feet or greater at mean low water throughout this run, although shifting shoals associated with Governors Island Flats require strict adherence to the buoyed channels. The most recent edition of the US Department of Commerce *Coast Pilot I* references a "least depth of 3 feet" (mean low water) for the channel approach between the Governors Island Flats and the Deer Island Flats to the east.[2]

3.0 Existing Water Transportation System/Infrastructure

Figure 5, *Boston Harbor Passenger Water Transportation Routes and Docks*, is from the current Massachusetts Port Authority (Massport) web site and shows the distribution of MBTA Rapid Transit stations, MBTA water transportation routes and landings, and designated water taxi docks within the Boston Inner Harbor. As can be seen, public water transportation connections are concentrated in the Charlestown, North End, downtown Boston waterfront and the South Boston Seaport sections of the Harbor. Two taxi landings are identified on the East Boston side of the Harbor, one of which is the Logan Airport Dock. As discussed below, seasonal passenger ferry service is offered between Rowes Wharf in Boston and the Town of Winthrop Town Pier by a private commercial operator. Meanwhile, all but one of the existing piers along Chelsea Creek serve marine industrial purposes, while all of the existing piers in the Orient Heights / Belle Isle embayment are either private yacht clubs/marinas or private residential docks.

[2] National Oceanic and Atmospheric Administration, 2012, *Coastal Pilot I – Atlantic Coast Eastport to Cape Cod,* US Department of Commerce, National Ocean Service (42nd Edition).

3.1 MBTA Commuter Ferries

The MBTA runs commuter ferry service with 149-person capacities between Long Wharf and the Logan Airport Dock at Logan Airport on a regular schedule and as part of the larger Quincy-Hull-Logan-Boston public water transportation service. Similarly, the MBTA runs a service between Long Wharf and the Charlestown Navy Yard at Constitution Wharf utilizing passenger ferries with 149- and 190-person capacities. Commuter ferry run times between Long Wharf and the Logan Airport Dock are approximately 10 minutes. Commuter ferry run times between Long Wharf and the Charlestown Navy Yard dock are also on the order of 10 minutes.

3.2 Water Taxis

At least four commercial providers operate water taxi services within the Boston Inner Harbor, as well as outer harbor destinations. Generally these are on-call operations operating between established water taxi destinations, although all will also service private marinas. Generally the fleet consists of boats with capacities of 12 to 40 persons. Many of the smaller boats have open-sided, covered cabins to which clear plastic tarps can be attached in inclement or winter weather. Travel times between Long Wharf and Logan Airport Dock average seven minutes (a few minutes quicker than the MBTA commuter ferries). Most of the water taxi services also offer private or pre-scheduled sightseeing or party cruises throughout Boston Harbor.

3.3 Harbor Tours / Tourist Boats

There are a number of private tour boats operating within the inner and outer harbors, offering a range of boating services from small vessel water taxi service to large vessel charter cruises. At least one cruise line, Boston Harbor Cruises, also operates a commuter ferry service, including a summer season (May to October) passenger service between Rowes Wharf and the Winthrop Town Pier in Winthrop Harbor (see Figure 2). This service, which operates seven days a week, has a run time of approximately 35 minutes.

4.0 Water Transportation Considerations

The Boston Inner Harbor is generally well sheltered and often remains essentially ice free throughout the winter. Hence, public and commercial water transportation within the Inner Harbor is available year-round and has become a well-established mode of transportation to certain destinations. Of particular note within the Inner Harbor are the water shuttle routes between downtown Boston and Logan Airport, the Seaport District and the Charlestown Navy Yard. Constraints to establishing water transportation in the upper reaches of the Inner Harbor, and in particular Chelsea Creek and the Orient Heights / Belle Isle embayment include limited bathymetric and overhead clearances, a lack of existing landings, the potential for shipping conflicts (Chelsea Creek) and lack of landside services

and support. Time of travel can also pose a practical limitation on water transportation when timeliness is of concern.

4.1 Navigational Considerations

Key considerations in assessing the viability of water transportation, and navigation in general, include water depths (bathymetry), overhead clearances, and the potential for conflict with other boating/shipping interests on the water.

4.1.1 Bathymetry

Water depths within the Boston Inner Harbor are generally adequate for navigation in close proximity to the current "shoreline," due in large part to the historic filling of the Inner Harbor. Typical of a mesotidal estuary (tidal range 6 to 12 feet), the original Boston Harbor shoreline was often fronted by extensive inter-tidal zones, with beaches and mud flats exposed at mid and low tides. Over time, and with the intent of accommodating shipping, the edges of the shoreline were filled out to sub-tidal depths. Hence, today there is little exposed beach or shallows to be found within the Inner Harbor and many of the Inner Harbor wharves and piers have adequate depths for boating access throughout the tidal cycle.

The above tends to be less true in the upper reaches of the Boston Harbor tidal estuary, and in many cases boat access in these areas has required repeated channel dredging and/or the construction of long individual piers extending into the main channels of the tidal creeks and embayments. As noted above, Chelsea Creek has been maintained as a US Army Corps of Engineers navigation project, which includes a 38-foot deep channel to the headwaters for the Creek near the Project site. Meanwhile, at low tide mudflats are exposed 100 feet or more seaward of the southern side of Chelsea Creek north of the Chelsea Street Bridge. This is of some importance when contemplating the construction of new piers or wharves, as the placement of permanent in-water structures (i.e. docks and piers) is generally prohibited within certain distances of a federal channel. The New England Division of the US Army Corps of Engineers has established a "typical setback" for such structures of three times the design depth of the channel which, in Chelsea Creek, equates to a 114 foot setback from the designated federal channel.[3] Should dredged depths be increase to 40 feet as currently proposed, this channel setback would increase to 120 feet.

While not part of the federal Boston Harbor navigation project, the entranceways to Winthrop Harbor and the Orient Height / Belle Isle embayment have been dredged

[3] US Army Corps of Engineers, New England District, July 1996, *Guidelines: For the placement of fixed and floating structures in navigable waters of the United States by the Regulatory Program of the New England District, U.S. Army Corps of Engineers*

numerous times, and mudflats ring the entirety of the approach and basin. Away from these flats water depths in the embayment are generally on the order of 20 feet. However, charted depths over the Governor Island and Deer Island Flats at the mouth to Winthrop Harbor and leading to the Orient Heights / Belle Island embayment beyond are shown as generally 10 feet or less. As noted above, the most recent edition of the *Coastal Pilot I* reports a "least depth of 3 feet" at mean low water (MLW) along this route.

4.1.2 Overhead Clearances

Navigation in certain upper reaches of the Boston Inner Harbor is constrained by overhead clearances. The construction of automobile and/or rail bridges has resulted in limited navigational clearances in all of the major channels of the Inner Harbor, including portions of the Reserved Channel, the Fort Point Channel, the Charles River, the Mystic River and Chelsea Creek.

Two drawbridges cross Chelsea Creek; specifically, the Andrew P. McArdle Bridge at the mouth of Chelsea Creek and the recently replaced Chelsea Street Bridge 0.8 miles upstream (see Figure 3). The McArdle Bridge is a bascule type bridge with a closed clearance at high tide of 20 feet. The new Chelsea Street Bridge is a lift type bridge, with a closed clearance of only 7 feet at high tide, as reported in the above referenced *Coastal Pilot I*.

Opening operation procedures for the drawbridges of Chelsea Creek are dictated by Tile 33 of the Code of Federal Regulations, Part 117, Drawbridge Operation Regulations, and more specifically Part 117.593 which states:

> *All drawbridges across the Chelsea River shall open on signal. The opening signal for each drawbridge is two prolonged blasts followed by two short blasts and one prolonged blast. The acknowledging signal is three prolonged blasts when the draw can be opened immediately and is two prolonged blasts when the draw cannot be opened or is open and must be closed.*

Chelsea Street serves approximately 20,000 automobiles on an average weekday and operation of the lift bridge generally takes 20 minutes.

No bridges span the approaches to the Orient Heights / Belle Isle embayment, but the Saratoga Street Bridge in Winthrop has a fixed clearance of 6 feet at high tide, which prevents navigation by all but the smallest of vessels northward into the Belle Isle Marsh (see Figure 4).

4.1.3 Marine Traffic

Boston Harbor is the largest seaport in New England. The Inner Harbor is particularly noteworthy for its boating traffic and associated infrastructure, which includes the extensive network of private and public water transportation terminals described above, bulk cargo and fisheries piers within the Inner Harbor, bulk cargo and fuel terminals upstream of the

Inner Harbor on the Mystic River and Chelsea Creek, and numerous public and private boat launches and marinas within the Inner Harbor and upstream on the Mystic and Charles Rivers. All three of the potential water transportation routes to the Project site will encounter this condition. However, as discussed below, the Chelsea Creek and Orient Heights / Belle Isle Embayment segments are of note in that boat traffic on the former is almost entirely marine industrial, while on the later is generally limited to pleasure craft.

4.2 Dockside Amenities

The dockside infrastructure necessary to support water transportation depends on a number of factors, including the mode of transportation, the passenger base and the target destination(s). Dockside support for commuter ferries generally includes covered terminals with waiting rooms, public restrooms, and ticketing facilities, while taxi terminals may require only a landing platform and ramp. In all cases certain improvements, such as compatibility with Americans with Disabilities Act (ADA) and Massachusetts Architectural Access Board (MAAB) requirements and guidelines, are a necessity.

As noted in the BRA 2002 *Boston Inner Harbor Passenger Water Transportation Plan*, Boston Harbor ferry and water taxi operations are served by a wide variety of public and private terminal/dock facilities that have evolved over time.[4] As a result, the amenities at these terminals and docks vary greatly in terms of both required and desirable attributes. In order to address this issue the above plan identifies "specific terminal facility design guidelines" to be adopted by existing and proposed landings. These guidelines include, in part, the following:

- **Consistent Freeboard Heights.** Low freeboard (2 feet) for water taxis and public landings, medium freeboard (3.5 to 4.0 feet) for side loading ferries, and high freeboard (6.0 to 7.5 feet) for end loading ferries.

- **ADA Access (required)** and **Universal Design Access (recommended)**. Access to meet MAAB and ADA requirements from sidewalk and deck levels to boarding docks/floats for a mean tide range of 9.5 feet. Maximum ramp slopes of 1:12 to 1:20. Similar access from floats to vessels.

- **Dock/Ramp Amenities.** Standard equipment to include lighting and convenience outlets, non-skid surfaces, covered ramps, bollards, cleats, fenders, snow removal equipment, life preservers, ladder from water to float surface, schedule/information board.

[4] Boston Redevelopment Authority, January 2000, *Boston Inner Harbor Passenger Water Transportation Plan*, prepared by TAMS Consultants, Inc with Bourne Consulting Engineering.

- **Deck/Pier Amenities.** Standard equipment to include lighting and convenience outlets, non-skid surfaces, covered waiting area, emergency phone, schedule/information board.

- **Intermodal Connections.** Although requirements will vary by site, certain intermodal amenities are desirable from a functionality perspective. These include proximity to public transportation; specifically, MBTA/rail links - 5 minute walk, bus curbside capacity - 3 minute walk, taxi curbside capability at nearest public way, direct sidewalk or Harborwalk connection to first public way, service/public safety access to dockside, and directional signage between mode points.

While such consistency can be assumed for most of the existing Inner Harbor ferry terminals and taxi landings, there are no designated landings in Chelsea Creek and, with the exception of the ferry terminal in Winthrop Harbor, the landings in Orient Heights / Belle Isle Embayment are limited to private marinas. Presumably any future public landings will be required to meet or exceed these standards.

4.3 Landside Transportation / Intermodal Connections

As noted above, the Project site does not directly abut a waterway of a scale that could support commercial water transportation access to the site. There are three water routes that could potentially incorporate water transportation for a segment of the access routes to the Project site from the downtown Boston and/or Seaport waterfronts. However, some form of water to land transition facility and associated land-based transportation system will be required to complete the connection to (and from) the Project site.

The above-referenced *Boston Inner Harbor Passenger Water Transportation Plan* suggests that reasonable connections for water transportation services include MBTA/rail links within a 5 minute walk, bus curbside capacity within a 3 minute walk, and/or taxi curbside capability at the nearest public way. For the purpose of this discussion no distinction is made between resort-bound passengers and the general public as to the viability of including walking segments as part of a resort transportation access plan.

4.3.1 Existing MBTA Rapid Transit and Bus Services

Figure 6, *Potential Landside Public Transportation Connections*, shows the routes of train and bus routes between the East Boston waterfront and the Project site. As shown, bus service is also available from the Winthrop Town Pier and from areas proximate to the upper reaches of Chelsea Creek.

Public trains accessing the site are limited to the MBTA Blue Line rapid transit which, for the purpose of this analysis, connects the East Boston waterfront via the Maverick Station to the two Blue Line Stations at the Project site. Run times from Maverick Station to the Suffolk Downs and Beachmont Stations are approximately 8 and 10 minutes, respectively. It is of note that the Blue Line also offers direct connection between the downtown Boston

Waterfront and the Project site via Aquarium Station located at Long Wharf/Central Wharf (see Figures 5 and 6). Run times from Aquarium Station to Suffolk Downs Station are approximately 11 minutes.

Public bus service is available from the East Boston waterfront to areas proximate to, if not directly to, the Project site. Specifically, and as shown on Figure 6, the 120 Bus offers outbound service to the Orient Heights MBTA Station via Boardman Street, Waldemar Avenue and Orient Avenue in the Orient Heights neighborhood. The Waldemar Avenue segment of the 120 Bus route borders the Project site, and the Orient Avenue segment intersects Bennington Street within several blocks of the Suffolk Downs Station. Bus run times from the areas of Maverick, Sumner and Meridian Streets in East Boston to Waldemar Avenue and the Orient Avenue/Bennington Street intersection are on the order of 20 to 25 minutes outbound, due primarily to the diversion the 120 Bus route takes through the Orient Heights neighborhood.[5]

To the degree the 120 Bus route includes a segment of Route 1A (McClellan Highway) between Boardman Street and Waldemar Avenue, this route also represents a potential public transportation connection between the upper segment of Chelsea Creek and the Project site, with run times on the order of 5 to 12 minutes.

Finally, there is public bus service from Winthrop, and more specifically the Winthrop Town Pier, to the Orient Heights MBTA station. This bus route passes the Winthrop Town Pier ferry terminal and runs along Saratoga Street immediately north of the Orient Heights / Belle Isle Embayment. However, a third transportation connection by either a bus or train would be required for the final segment from the Orient Heights Station to the Project site.

4.3.2 Commercial and/or Private Intermodal Connections

The option exists to utilize taxi, livery, or dedicated shuttle bus service from a water landing to the Project site. A number of roadway arterials run directly from the East Boston Waterfront to the Project site, including Route 1A and Bennington Street. Automobile travel times from anywhere along the East Boston Inner Harbor waterfront, including the Logan Airport Dock and the Boston Harbor Shipyard & Marina, are generally between 8 and 10 minutes. Automobile travel times from the Winthrop Town Pier area are on the order of 12 minutes.

4.4 Time of Travel

Because there is no direct water connection to the Project site, any use of water transportation between downtown Boston or the South Boston Seaport waterfronts and the

[5] Bus and rail run times from the Massachusetts Bay Transportation Authority, Rider Tools Trip Planner: http://www.mbta.com/rider_tools/trip_planner/.

Project site will require landside transportation support. This may include public transportation in the form of trains or buses, commercial transportation such as taxis and livery services, or private operations such as dedicated shuttle buses. The time of travel between the downtown Boston and Seaport waterfronts and the Project site can be roughly determined by summing the time of travel for each of these components.

Table 1, *Combined Time of Travel to the Project Site*, presents time of travel estimates for existing modes of transportation to the Project site, assuming the first segment entails water transportation from the downtown Boston waterfront. For the purpose of the analyses presented in Table 1 several assumptions have been made regarding time of travel. Specifically, a water transport speed of 8.0 knots has been assumed for the Boston Inner Harbor in the section between the mouth of Chelsea Creek and the west end of Logan Airport. A speed of 4.5 knots is assumed for Chelsea Creek above the McArdle Bridge, while a speed of 15.0 knots is assumed for the outer portions of the Harbor, from the west end of Logan Airport to the entranceway to Winthrop Harbor approach at the Deer Islands Flats. Above this point, an average water speed of 6.0 knots is assumed, recognizing both "No Wake" and specific local speed limits within and proximate to Winthrop Harbor and the Orient Heights / Belle Island embayment. Meanwhile, landside times of travel have been obtained from published schedules for buses and trains, and from on-line travel services. Obviously any and all of these times can be dramatically affected by such factors as weather and traffic, but are considered adequate for comparison purposes. Finally, walking and waiting times between the various modes of transportation are not included in this analysis.

5.0 Assessment of Water Transportation Alternatives

While the Project site does not abut a waterway of a scale that could support commercial water transportation access directly to the site, there are three routes to the Project site that could potentially incorporate water transportation for a segment of the access routes from the Boston Inner Harbor piers area. These are Chelsea Creek, the Inner Harbor (Logan Airport Dock and Boston Harbor Shipyard & Marina) and the Orient Heights / Belle Isle embayment north of Logan Airport. The following sections assess each of these routes in relation to the basic water transportation criteria identified above.

5.1 Chelsea Creek

Chelsea Creek is the closest navigable waterway to the Project site, approaching to within approximately 500 feet of the Tomesello Road entrance to the Project site. Unfortunately, Chelsea Creek is also the most highly constrained water transportation route to the site. Of greatest concern is the potential conflict with commercial marine traffic. As noted in the most recent edition of the *Coast Pilot I,* "Chelsea River has a heavy traffic of deep-draft oil tankers." These tankers and associated tugboats can effectively occupy the entire navigable channel while in transport, and often extend well into the channel when at dock. On a

Table 1: Combined Time of Travel to the Project Site

Route/Sub-Route	Existing Dock	Time of Travel (minutes)				
		Water	Roadway	Train	Bus	Total

		46	---	3	----3	**51**

more practical vein, navigation in the upper half of Chelsea Creek is impeded by the 7-foot clearance of the Chelsea Street Bridge. Navigation beyond the bridge requires the raising of the structure and the associated impact to automobile traffic on Chelsea Street. Currently, there are no existing public docking structures or amenities along the Chelsea Creek shoreline.

5.1.1 Navigational Considerations

Chelsea Creek is part of the US Army Corps of Engineers Boston Harbor navigation project, which calls for a 38-foot deep channel to the headwaters for the Creek near the Project site. Hence, water depths are sufficient for water transportation. However, the 7-foot clearance of the Chelsea Street Bridge poses a hindrance to the establishment of regular water transportation upstream of the bridge.

The shoreline of Chelsea Creek is marked by inter-tidal mud flats which, when combined with the required setbacks for the federal channel; similarly pose constraints to access to the shoreline. Figure 7, *Chelsea Creek Detail*, shows both the limits of the federal navigation channel and the 114-foot setback for fixed and floating structures as dictated by the US Army Corps of Engineers. As shown, the required 114-foot setback from the designated federal channel would generally push the siting of any new landing structure into intertidal mud flats. This, in turn, would require dredging of a side channel into the mud flats in order to establish navigable water depths to the landing. As noted above, this setback may be increase to 120 feet in the near future.

5.1.2 Existing and Potential Water Transportation Landings/Docks

There are no public landings located along Chelsea Creek upstream of the McArdle Bridge. With the exception of a small marina immediately upstream of the McArdle Bridge, all of the existing docks and piers on the south side (Project side) of Chelsea Creek are associated with marine industrial operations and, more specifically, fuel off-loading. These include the Conoco fuel terminal immediately downstream of the Chelsea Street Bridge, and the Global Revere fuel terminal at the headwaters of the federal channel opposite the Project site.

The industrial nature of the southern shoreline of Chelsea Creek offers limited opportunity for the development of water transportation landing facility along the Creek's shoreline. This is particularly true in that section of Chelsea Creek upstream of the Chelsea Street Bridge. As shown in Figure 7, any new landing facility in this section of the Creek would require the dredging of a side channel in order to maintain adequate setbacks from the federal channel while establishing adequate water depths adjacent to the new landing facility. Meanwhile, the landside component of any new landing facility would be constrained by the existing industrial or commercial land uses. Finally, the landside transportation infrastructure along this section of the Creek is also limited, with only internal private roadways located along or proximate to the Creek, no public transportation connections other than the short segment of the 120 Bus route located on the opposite side of Route 1A, and limited vehicle access and/or only one way vehicle access to Route 1A.

The development of water transportation landing facility along the Chelsea Creek shoreline between the McArdle Bridge and Chelsea Street Bridge is similarly constrained by the required federal channel setbacks and the industrial nature of the adjacent land uses. However, there are several open space parcels along this segment of the Creek. Of particular note is the new Condor Street Urban Wild Park built upon the site of a former fuel tank farm on Condor Street and the adjacent MBTA "Car Barn" site on Condor and Eagle Streets. The park protrudes into Chelsea Creek and includes the remnants of a formerly dredged landing on its downstream edge. In contrast, the Car Barn site is located in an indent along the shoreline of Chelsea Creek. Both Condor and Eagle Street are improved roads with limited traffic which, while not proximate to public transportation, are readily accessible by taxi or shuttle bus. The park does not include landside or waterside boat landing facilities, and some maintenance dredging would likely be required in order to

establish a new landing with adequate water depths at this location. The Car Barn site is fronted by an extensive mud flat which would require extensive dredging in order to be made useful for navigation purposes.

The Condor Street Urban Wild park features restored salt marsh and meadow, but includes walking paths, a boardwalk, sculpture, and a viewing platform that protrudes into Chelsea Creek. It was created in a joint effort by the Boston Conservation Commission, the Boston Environment Department, the Boston Parks and Recreation Department, the US Environmental Protection Agency and the Chelsea Creek Action Group, a citizen's advocacy group dedicated to restoring Chelsea Creek and its shoreline. Whether the creation of a boat landing at this location would be deemed desirable by the above parties has not been explored. However, both the 2000 *East Boston Master Plan* [6] and the 2002 *East Boston Waterfront District Municipal Harbor Plan* [7] identified the then vacant and unimproved Condor Street site, as well as the adjacent "MBTA Car Barn" site, as potential water taxi landing sites.

5.1.3 Time of Travel

The Condor Street Urban Wild park is located approximately 2.4 miles from the downtown Boston waterfront via Chelsea Creek; the Project site is 3.6 miles by water. Travel times are on the order of 25 and 33 minutes, respectively, to these sites, the bulk of which is the water transportation component. While these are not necessarily prohibitively long run times, they do not recognize the potential for considerable delays as a result of fuel tanker traffic on the Creek and/or the raising of the drawbridges. As noted above, there are no public transportation services in this area of East Boston; hence the landside transportation component would need to be supplied by taxi, livery or shuttle bus services.

5.2 Boston Inner Harbor

The Boston Inner Harbor routes to the Logan Airport Dock and the Boston Harbor Shipyard & Marina offer direct connections across the Boston Inner Harbor, but a physically longer landside connection to the Project site. These routes have the benefit of existing waterside and landside docking infrastructure, as well as proximity to public transportation and/or direct vehicular connections. The development of additional water taxi or water ferry landings at undeveloped or underdeveloped sites in East Boston that are located closer to existing bus routes and/or the Maverick Station may also be possible.

---

[6] Boston Redevelopment Authority, March 2002, *East Boston Waterfront District Municipal Harbor Plan*.

[7] Boston Redevelopment Authority, April 2000, *East Boston Master Plan*.-

5.2.1 Navigational Considerations

There are no depth or clearance limitations for water transportation from the public wharfs and commuter docks along the downtown Boston and Seaport waterfronts and the existing Logan Airport Dock and Boston Harbor Shipyard & Marina in East Boston.

5.2.2 Existing and Potential Water Transportation Landings/Docks

Two significant water transportation landings/docks are located along the East Boston waterfront opposite the downtown Boston and Seaport waterfronts: the Logan Airport Dock and the Boston Harbor Shipyard & Marina. The Logan Airport Dock is a full service facility serving water taxi and commuter water ferry operations. The Boston Harbor Shipyard & Marina offers water taxi landing facilities.

In addition to the existing landings referenced above, there are a number of other sites along the East Boston waterfront that offer the potential as new landing sites (see Figure 8, *Boston Inner Harbor Detail*). Of particular note are the Lewis Mall site at the waterfront end of Lewis Street and the Liberty Plaza/Central Square waterfront area. Both of these sites are specifically recommended in the above-referenced *East Boston Master Plan* and *East Boston Waterfront District Municipal Harbor Plan* as prime locations for the addition of water transportation landings. Indeed, as noted in the Municipal Harbor Plan, "In the mid-1990's the community's desire to restore community-oriented ferry service to Boston resulted in the construction of a new ferry terminal at the end of Lewis Mall with MBTA service to downtown." This service ran in 1995 and 1996 "but failed due to insufficient commuter and non-commuter ridership."

Other sites identified as potential landings or water taxi sites along the East Boston waterfront include the East Boston Piers Park, Pier 1, and the Clippership Wharf site. Currently the East Boston Piers Park floats are restricted for Piers Park sailing vessel use. Public water transportation services will likely be incorporated as a component of any future private development projects proposed at these sites.

5.2.3 Time of Travel

Both the Logan Airport Dock and the Boston Harbor Shipyard & Marina are located approximately one mile directly opposite Boston Inner Harbor from the downtown Boston and Seaport waterfronts. The other potential East Boston water landing sites are similarly located within close proximity to the downtown Boston and Seaport waterfronts. Water travel times to these existing and potential sites are on the order of 5 to 7 minutes.

The Boston Harbor Shipyard & Marina is within walking distance of both MBTA rail service and MBTA bus service, although the existing bus route to the Project site is not direct. The other potential East Boston water landing sites are also within walking distance of these landside services, with the Lewis Mall site having the most direct landside connection to the MBTA Maverick Station. Although the East Boston waterfront is more distant from the

Project site by land than either Chelsea Creek or the Orient Heights / Belle Isle Embayment, the existing roadway infrastructure is such that landside travel to the Project site by vehicle (i.e. taxi, livery service, or shuttle bus) is only 9 to 10 minutes. As a result (and discounting existing bus travel as a component), the combined time of travel to the Project site via the Boston Inner Harbor route(s) is on the order of 13 to 17 minutes.

5.3 Orient Heights / Belle Isle Embayment

The Orient Heights / Belle Isle Embayment is located almost eight miles from the downtown Boston and Seaport waterfronts via water. The first half or more of the route travels the eastern extent of the Boston Inner Harbor, then veers northward past the approaches to Winthrop Harbor and around the eastern edge of Logan Airport. Time of travel and the lack of existing or potential docking facilities constrain the feasibility of utilizing this route for water transportation to the Project site.

5.3.1 Navigational Considerations

While the first half of the water route from the downtown Boston and Seaport waterfronts to the Orient Heights / Belle Isle Embayment is located within the deep waters of the Boston Inner Harbor and the "President Roads" portion of the Outer Harbor, the second half of the route follows a relatively narrow channel between the shoals of the Governors Island Flats and Deer Island Flats, past the shallows of Snake Island in Winthrop Harbor, and through the Belle Isle straights between Chelsea Point in Winthrop and the runway extensions of Logan Airport. The most recent nautical chart for the Governors Island Flats and Deer Island Flats area suggests water depths of 10 feet or more at MLW. However, as referenced above, the most recent edition of the *Coast Pilot I* suggests a "least depth of 3 feet" along this route. The channel width is generally narrow, and decreases to approximately 100 feet through the Belle Isle straights. Meanwhile, the portion of the route east of Logan Airport and within the President Roads is susceptible to adverse wind and weather impacts during storm events.

5.3.2 Existing and Potential Water Transportation Landings/Docks

There are no public landings within the Orient Heights / Belle Isle Embayment. There are three private marinas, two of which extend into the deeper waters of the embayment, and one of which is less readily accessible. There are also numerous private residential docks, particularly along the eastern shoreline of the embayment. A residential neighborhood is located on the north side of the embayment, although the residences are separated from the water's edge by Baywater Street. Constitution Beach, a public beach and park marks the western shore of the embayment.

The residential character of the northern (Project side) of the Orient Heights / Belle Isle Embayment limits the potential for establishing a new landing facility in this area. It may be possible to establish a public access point for water taxi service at one of the existing

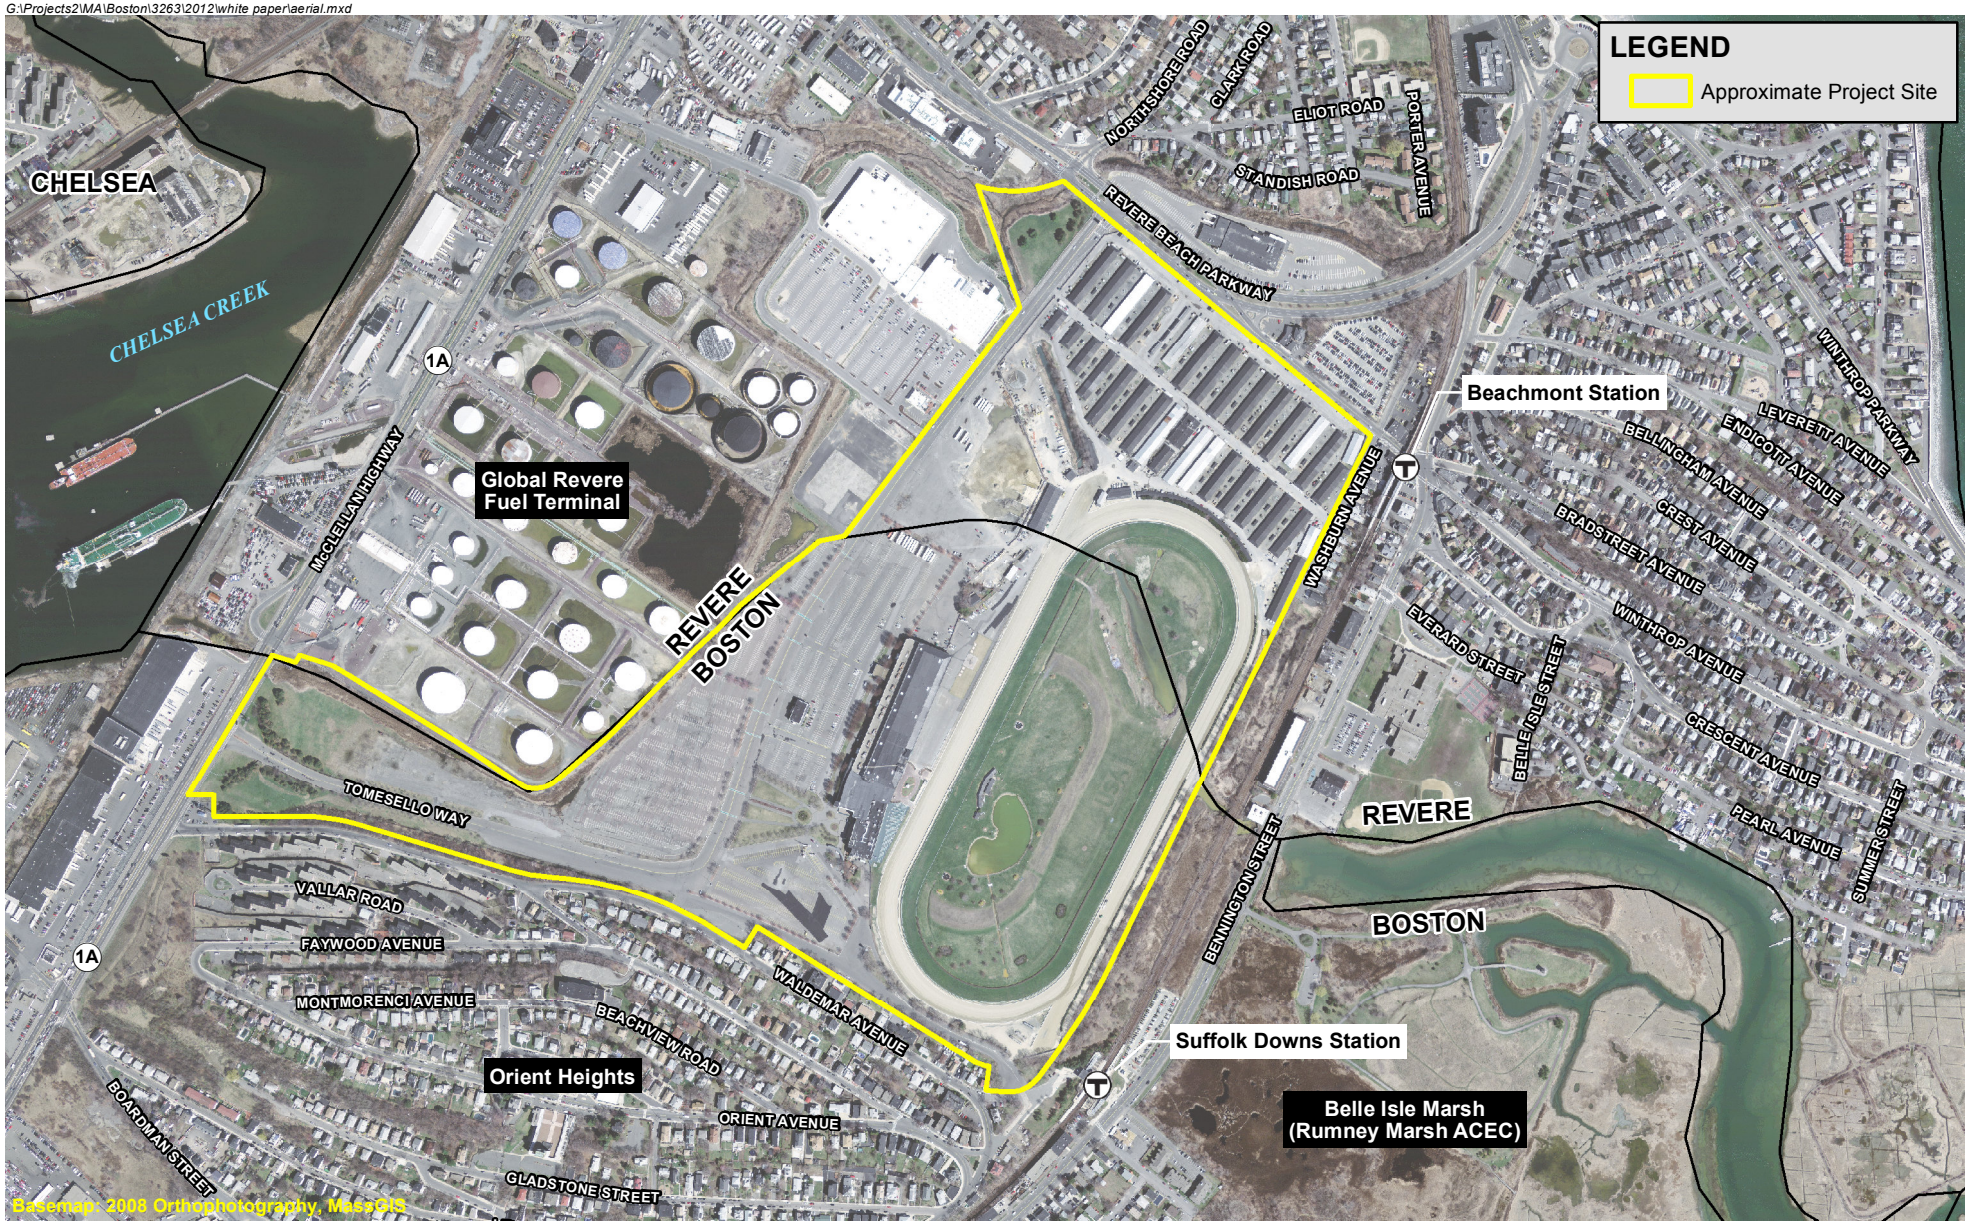
marinas, but high volume access with landside vehicular support may create traffic concerns.

As noted above, there is a public ferry boat landing at the Town Pier in Winthrop Harbor. Currently Boston Harbor Cruises operates a seasonal (May to October) commuter ferry service between the Town Pier in Winthrop Harbor and Rowes Wharf. However, individually both the water and the landside transportation segments of this route are as long as or longer than those matching segments of the Boston Inner Harbor and Chelsea Creek routes. There is no direct public transportation from the Winthrop Town Pier to the Project site; rather the connection is to the Orient Heights Station, from which either a second bus or the Blue Line rapid transit can be obtained for the final leg of transport.

5.3.3 Time of Travel

Although boats speeds are generally much greater in the outer portions of the Inner Harbor, the distances to Winthrop Harbor and the Orient Heights / Belle Isle Embayment are such that travel times to the Project site via these routes are twice or three times those of the Chelsea Creek and Boston Inner Harbor routes.

6.0 Summary



In terms of convenience and practicality of utilizing water transportation as a component of transportation to the Project site, the direct route across the Boston Inner Harbor to the waterfront of East Boston, and thence to a ground transportation link, is the most efficient. Both the waterside and landside docking infrastructure is in place, and the landside transportation component includes, or is set to include, multimodal options. Conversely, the Chelsea Creek and Orient Heights / Belle Isle Embayment are without established docking infrastructure, and the location for establishing such infrastructure is not apparent at the terminus of either route. In addition, even if a facility could be constructed at a favorable location along either of these routes, a landside transportation component would still be required. In either case, the necessary landside component would not be significantly different in terms of convenience and practicality than that of the Boston Inner Harbor landside component. Ultimately, there would be no benefit to utilizing either of the longer water transportation routes in the hope of decreasing the landside travel component.

Although the above analysis did not include walking times, the establishment of additional water taxi locations along the East Boston waterfront would likely improve the connection to public transportation service, potentially shortening the walking distance to the Maverick Station. The addition of water ferry service at a point along the waterfront west of the Boston Harbor Shipyard & Marina would add the potential for intermodal connections currently not available from the Logan Airport Dock at the eastern extreme of the East Boston waterfront.

200 kW CHP

D.3.1 200 kW CHP Performance Estimate

D.3.2 Economic Analysis of 200 kW CHP System

ATTACHMENT D.3.1
200 kW CHP PERFORMANCE ESTIMATE

Problem:

Estimate the annual performance of potential CHP application.

Given:

From Tecogen InVerde 100 Ultra data sheet (x2)

electricity	200	kWe
recovered heat	1.34	MMBtu/hr
combined efficiency	80.0%	HHV

Grid-supplied electricity GHG[1]	780	lbs CO_2/MWh
Natural gas GHG [2]	117	lbs CO_2/MMBtu

[1] 2011 New England Electric Generator Air Emissions Report, Table 5.4, 2011 value

[2] EIA Fuel Emissions Factors, Weighted National Average (1029 Btu/scf)

Assumptions:

CHP is thermal load-following

Annual capacity factor [3]	77%
Annual waste heat utilization	100%
Fired NG boiler efficiency	83%

[3] includes allowances for maintenance and thermal load-following

Calculations:

Fuel input	2.53	MMBtu/hr HHV		
Heat input	17,080	MMBtu/yr	999	tons/yr GHG emitted
Electrical output	1,353	MWh/yr	-528	tons/yr GHG offset
Waste heat utilized	9,060	MMBtu/yr		
Boiler fuel displaced	10,916	MMBtu/yr	-639	tons/yr GHG offset
		net reduction	-167	tons/yr

Annual thermal efficiency	80%

ATTACHMENT D.3.2
Economic Analysis of 200 kW CHP System

System Description

A) Two TECOGEN InVerde Ultra 100 Gas Engine generator sets with hot water waste heat recovery system

   a. 370 kW (HHV) this is 1,262,000 Btu/hr each unit

   b. 100 kW generator output each unit, 200 kW total

   c. unit staging and load following down to 40 percent of full output of single unit.

   d. net electrical efficiency of 27% (HHV-based)

   e. Full thermal load following with storage – continuous run with no excess heat rejection to atmosphere

B) Thermal storage tank with 5 MMBtu usable storage capacity

Basis of System Operation

Input and Output values from the CHP system are based on the following:

a. Thermal load following with no heat rejection to atmosphere

b. Total of 9060 MMBtu (2,655 MWh thermal) of heat from cogen used in facility; 7,780 MMBtu for domestic water heating and 1,280 MMBtu for space heating.

c. 17,094 MMBtu of gas input to CHP

d. 1,352,600 kWh of electric output from CHP

Economic Analysis

Value of electricity:

1,352,600 kWh/year. At $0.0796/kWh, this is worth approximately $107,700/year. If the operation of the cogeneration equipment is sustained throughout the coincident site peak period for each summer month, the value of the peak demand savings will be an additional $14,200 ($23.62/kW x 150 kW x 4 months) for the 4 summer months and could be worth as much as $21,200 ($17.65 x 150 x

8 months) for reducing demand in the winter months. Total Value = $143,100/year (some of the $35,400 of demand charge benefit could be lost due to system operation interruptions)

Value of domestic water and space heating:

The cogeneration system can meet nearly 100 percent of the approximately 7,780 MMBtu of domestic water heating needs for the site. This will offset the need to purchase approximately 9,150 MMBtu of gas for water heating which is worth approximately $73,200 per year with gas at $8.00/MMBtuU and 85% eff. boilers. The cogeneration system can supply approximately 1,280 MMBtu of the projected 9,040 MMBtu of space heating needs for this site. This will offset the need to purchase approximately 1350 MMBtu of gas for space heating which is worth approximately $10,800 per year with gas at $8.00/MMBtu and 95% eff. boilers. Total heat output is 9,060 MMBtu or 2,650 MWh. Total Value = $84,000

Value of Alternative Energy Credits from Cogeneration System:

The Alternative Energy Credits (AEC's) for CHP will provide an annual revenue stream from the efficient use of natural gas to provide both heat and electricity. The credit is presently worth approximately $22/MWh and the AEC's are calculated as follows:

$$AEC's = E_{elect}/0.33 + E_{therm}/0.80 - E_{CHPin}$$

For this installation, the AEC's are expected to be:

$$AEC = 1,352.6/.33 + 2,655/.8 – 5,010 = 2,407 \text{ MWh}$$

The 2,407 MWh of AECs are worth approximately $53,000 per year in incentives from the state program.

Overall value of energy and AEC's:

Electric output =	$143,100 per year
DHW and Space heat =	$84,000
Value of AEC's =	$53,000
Total =	$280,100

Cost of Gas input:

17,094 MMBtu of gas input per year which is worth approximately $136,750 per year.

Cost of Maintenance:

The cost of operating and maintaining the engine/generator, (no SCR, no Boiler & assoc. equip, no absorption chiller) is expected to be approximately $0.0175 per kWh of electrical output from the generator. Based on the proposed load profile outlined above, the cost for operations and maintenance is expected to be $24,000 per year ($0.0175/kWh x 1,352,600 kWh)

Cost of Stand-by Electric Charges:

Cogeneration systems this small on a site this large are exempt from standby charges (for systems over 1,000 kW there are charges of $237/month plus $10.35 per kW of rated output per month for the four summer months and $6.25 per kW per month for the remaining eight months of the year).

Overall Costs:

Gas input =	$136,750 per year
Maintenance =	$24,000
Total Costs =	$160,750

Net benefits = $280,100 – $160,750 = $119,350 per year

Capital Costs

Cogeneration and pollution control Equipment – 200 kW @ $2000/kW = $400,000

Plant space for cogen and Storage Tank 400 sf. @ $400/sf = $160,000

Total cost = $560,000

Rebate from Utility: 200 kW @ 750 per kW = $150,000

Net Install cost = $560,000 - $150,000 = $410,000

Simple payback =$410,000 cost/$119,000 savings/yr = 3.5 years (without financing costs or tax implications).

ATTACHMENT D.5
Generation Potential of Kinetic Energy Device

Calculation of available energy in slowing or lowering vehicles

From basic physics, and applying some typical mechanical efficiencies to each of the components of the system, one can calculate the amount of electricity that can be produced from the available kinetic (change in velocity) or potential energy (change in elevation) of a given vehicle.

When slowing a vehicle down, the change in kinetic energy is calculated from the following:

$$KE_{Available} = KE_{Initial} - KE_{Final} \quad \text{or} \quad KE_{Available} = \tfrac{1}{2} M(V_{Initial}^2 - V_{final}^2)$$

When lowering from one elevation to another, the change in potential energy is calculated from the following:

$$PE_{Available} = PE_{Initial} - PE_{Final}$$

or if we define PE_{Final} as equal to zero,

$$PEAvailable = PEInitial$$

Vehicle Braking

Take an example of a 3200 lb car (a Toyota Corolla or Honda Civic) which has a mass (M) of 100 sl (slug) evenly decelerating from 40 mph (58.6 ft/sec) to 10 mph (14.6 ft/sec) in a distance of 100 feet (30.5 meters). This is a deceleration of -16.1 ft/sec^2 which is equivalent to moderate to firm braking for a vehicle.

$$KE_{Available} = \tfrac{1}{2} M((58.6)^2 - (14.6)^{2)} = 80{,}520 \text{ sl-ft}^2/\text{sec}^2 \text{ or } 80{,}520 \text{ ft-lbs}$$

If there is one car every 6 seconds, or 10 cars every minute, the amount of energy available in slowing the cars down this much is:

10 cars/min x 80,520 ft/lb per car or 805,200 ft-lb/min

At 33,000 ft-lb/min per horsepower, the 805,200 ft-lb/min calculated above is equivalent to 24.4 maximum available horsepower (18.2 kW).

Lowering a Vehicle from a Parking Ramp

For a parking ramp example which would harvest the potential energy of lowering cars from one elevation to another, the total available energy is:

PE = force x distance or weight x height: 3200 lb x 10 ft = 32,000 ft-lb/car

If we again had 10 cars per minute that would pass over approximately 100 ft of this device at a 10% grade, we would have 9.7 hp or 7.2 kW (3200 lb x 10 ft x 10 cars/min/33,000 ftlb/min x 0.746 kW/hp) available.

Converting Available Energy to Electricity

Since all mechanical and electrical devices have conversion losses, not all of this available energy will be converted to electricity. Typical efficiency ranges for components in this system are as follows:

Electric generator in the 10 to 20 kW size = 85 to 90% - choose 90%

Inverter to connect to grid in a 10 to 20 kW size = 88 to 94% - choose 94%

Hydraulic motor – 80 to 90% - choose 88%

Hydraulic accumulator – 90 to 95% - choose 95%

Hydraulic cylinder – 90 to 95% - choose 95%

Hydraulic piping/hoses/valve losses – 90 to 95% - choose 95%

Assume no vehicle braking with friction brakes, i.e., that all energy change in vehicle speed or vehicle elevation change is accomplished with this device. Then based on the generous component conversion efficiencies chosen above, the overall conversion efficiency for the system will be:

Net conv. eff. = 0.90 x 0.94 x 0.88 x 0.95 x 0.95 x 0.95 = 64%

From the 18.2 kW available from slowing 10 cars per minute, we can generate approximately 11.6 kW with one of these devices with this device when slowing the vehicles from 40 mph to 10 mph. If we had a continuous stream of cars (at one every 6 seconds) for 15 hours per day and 365 days per year that would decelerate through this single device (3.285 million cars/yr - not very realistic for this, or any, facility), the amount of electricity generated would be 63,500 kWh/yr.

1.0 INTRODUCTION

Nitsch Engineering has prepared this Stormwater Report to support the permit applications for the Resort at Suffolk Downs Casino in Boston and Revere, Massachusetts (subsequently referred to as the Project). The Project site is located at the existing Suffolk Downs site located at 525 McClellan Highway, East Boston, Massachusetts (subsequently referred to as the "Site"). The majority of the site (approximately 67%) is located in East Boston, and the remaining land is located in Revere. The Project consists of two distinct gaming areas (Casino I and Casino II), up to 450 guestrooms in two hotels, a multi-purpose meeting/entertainment space, dedicated covered parking, fine dining, and retail space. The Project includes a stormwater management system, which has been designed to comply with and exceed the requirements of the City of Boston, City of Revere, and the Massachusetts Department of Environmental Protection (DEP) Stormwater Management Standards.

The Project includes a substantial reduction in impervious ground cover which is considered a Low Impact Development (LID) practice. Reduction of impervious ground cover alone will significantly improve stormwater quality, reduce peak rates and volumes during storm events, and will promote ground water recharge by allowing rainwater to infiltrate into the restored areas. In addition to the reduction in impervious area, the Project will replace the existing stormwater management system which provides no storm water quality and peak rate mitigation. The existing system, which was constructed in the 1930s, will be replaced with a system that will exceed the requirements of the current Massachusetts Stormwater Standards improving the runoff which is ultimately conveyed to Sales Creek and the Belle Isle Marsh Inlet.

The characteristics of the existing site and existing stormwater system provide the Project an opportunity to significantly improve the stormwater conditions. The stormwater runoff from a large portion of the site flows to Sales Creek which flows to the Rumney Marshes Area of Critical Environmental Concern. The stormwater runoff from the entire site ultimately discharges to the Boston Harbor which has an associated draft Total Maximum Daily Load for pathogens. The site characteristics also provides the Project with an opportunity for protecting the onsite resource areas such as the 100-year flood plain and wetland resource areas.

2.0 EXISTING CONDITIONS

The Suffolk Downs facility is located adjacent to Route 1A in Revere and East Boston, Massachusetts. The vast majority of the site, including the buffer zone to delineated wetland resource areas, is heavily developed with a thoroughbred race track, ancillary facilities and structures, paved parking lots and areas of urban fill. The site is bordered to the north by Winthrop Avenue and residential development, to the east by Washburn Avenue, and beyond it the MBTA Blue Line tracks and Bennington Street as well as a mix of residential and commercial developments, to the south by Waldemar Avenue and residential developments, and to the west by Route 1A, a large fuel storage facility with numerous above ground storage tanks, and a retail shopping plaza.

Currently the developed site contains one (1) main building that contains the grandstand and simulcast operations and other smaller outbuildings; five (5) parking lots and other paved areas totaling to approximately 92 acres of impervious area; a horse racing track; and a Concentrated Animal Feeding Operation (CAFO) area. Portions of the CAFO area have been excluded from the Stormwater Calculations. See Section 2.7 for additional information.

The hydrologic analysis area includes off-site areas that contribute surface flow to the site and excludes a large portion of the ground surface area within the CAFO as shown on the

Predevelopment Drainage Map (Figure C.DR.01) since this flow is directed to the sanitary system. The roofs of the CAFO area have been included in the analysis since they generate stormwater runoff that flows to Sales Creek. The total analysis area for the site is 153.51 acres. See Section 2.7 for further discussion of the CAFO area.

2.1 Existing Drainage Infrastructure

Stormwater generated by the existing Suffolk Downs site is collected using catch basins and is piped via closed drainage systems to three (3) general design point locations. The design points, which remain consistent in the post-development stormwater design, are a culvert under Route 1A, Sales Creek, and a wetland to the east of the horse track. The majority of the existing stormwater management system was constructed in the 1930's prior to the promulgation of MassDEP Stormwater Management Standards. The majority of the stormwater management system provides negligible peak flow attenuation, water quality treatment, and groundwater recharge. Improvements were made to the existing CAFO system which include collecting stormwater that falls in the barn and stable area, conveying it to a settling pond within the race track infield, and then pumping this water directly to the BWSC sanitary sewer system.

2.2 NRSC Soil Designations

The Soil Classification Summary (Table 1) outlines the Natural Resources Conservation Services (NRCS) designation of the soil series at the Site. The majority of soils are classified as Udorthents, wet substratum without a hydrologic soil group (HSG) rating, indicating that the soils are comprised of loamy fill soils likely from the general vicinity. The soils to the southeast of the horse track in the wetland are classified as Ipswich mucky and are HSG D (minimal infiltration). Upland soils in the vicinity of the site include Newport silt loam and Newport-Urban land complex, which are classified as HSG C.

The onsite wetlands are considered HSG D and the upland areas are considered HSG C in the HydroCAD calculations. The HSG C designation of the Udorthents was confirmed during on-site soil investigations.

Table 1: NRCS Soil Classification Summary

On-site soil

Soil Unit	Soil Series	Hydrologic Soil Group
655	Udorthents, wet substratum	---
65	Ipswich mucky peat 0-1% slopes	D

Off-site soils for Udorthents determination

Soil Unit	Soil Series	Hydrologic Soil Group
325D	Newport silt loam 15 to 25% slopes	C
627C	Newport-Urban land complex 3-15% slopes	C

2.3 On-Site Soil Investigations

Approximately 30 test pits were performed on the Suffolk Downs Site in 2012 by Haley and Aldrich, Inc. The depth of the test pits range from 4-feet to 13-feet, with most of the depths to 6-feet. The results of the test pits were generally consistent throughout the Site. The soil test pit logs indicate the soil classification based on the Unified Soil Classification System (USCS). Throughout the entire site, the soil in the test pit logs is considered fill. Generally, the top 24-inches of soil are classified as either poorly graded sand (SP) or silty sand (SM). Below 24-inches the soil is mostly unclassified fill, SP, SM, or clayey sand (SC). In test pits close to Route 1A, silt (ML) and organic silt (OL) was found below 24-inches.

Test borings were also performed at the project site. Based on these borings and borings previously completed by others, subsurface soil conditions underlying the Project Site are expected to be characterized by the general soil profile as shown in Table 2 below.

Historical measurements of observation wells have indicated groundwater levels at the Project site to be between 0.5 and 16 feet below ground surface, and are generally on the order of two (2) to six (6) feet below grade. In recent test pit explorations completed for this Project, groundwater was observed typically at depths of 2.5 to 7 feet below site grades. Seasonal fluctuations in groundwater levels can also be expected.

Table 2: General Soil Profile Expected Under the Project Site

On-site soil

Generalized Description	Approximate Thickness of Layer (Feet)
Fill	3.8 to 20.8
Estuarine/Organic Deposits	5 to 55.5
Marine Deposits	7 to 57
Glacial Till	3 to 14
Bedrock (Cambridge Argillite	Depth to Rock of 50 to 110

2.4 Wetland Resource Areas including Flood Plain

On April 24 through 26 and May 3, 2012, wetland and soil scientists from Epsilon Associates, Inc. delineated wetlands and other resource areas within an approximately 200-acre study area on and immediately adjacent to the Project site. The purpose of the delineation and evaluation efforts was to define the extent of wetlands resource areas and associated buffer zones regulated under the Massachusetts Wetlands Protection Act (WPA) (MGL Ch. 131 § 40), Sections 401 and 404 of the U.S. Clean Water Act (33 U.S.C. 1344), and local wetland ordinances in the cities of Boston and Revere.

Wetland systems play an important role in the natural environment for the treatment of stormwater runoff; however, the existing wetland systems will not be used for water quality treatment. All water quality treatment provided by the proposed stormwater management system will take place prior to discharge to the existing wetlands.

The Project will protect the interests of the Wetlands Protection Act through the development of a comprehensive stormwater system that is compliant with the Massachusetts Department of Environmental Protection Stormwater Management Guidelines.

<u>100-year Floodplain</u>

Portions of the Project site are located within the 100-year floodplain as delineated by the Federal Emergency Management Agency (FEMA). In the case of the Project site, the floodplain has been classified as BLSF (see previous Orders of Conditions issued for recent other unrelated activities at the site: Order of Conditions 061-0620 and 006-1276). The BLSF on the Project site generally encompasses the existing paved entrance drive, paved parking areas adjacent to Sales Creek, the horse stable area, and the racetrack and infield. BLSF has no buffer zone.

Impacts to the BLSF from the Project will be mitigated by providing a one to one ratio of compensatory storage on a foot by foot basis.

Riverfront Area

Sales Creek, which in the Project site is primarily a manmade drainage channel, is depicted as a perennial stream on the applicable USGS quadrangle map. According to 310 CMR 10.58(2)(a)1a, a river or stream shown as perennial on the current USGS quadrangle or more recent map provided by MassDEP is perennial. Perennial streams (i.e., rivers) have an associated Riverfront Area that is defined as the area of land between a river's mean annual high-water line and a parallel line located 200 feet away, except that the parallel line is located 25 feet away in Boston and 25 feet away in densely developed areas as designated by the Executive Office of Energy and Environmental Affairs (EEA) Secretary pursuant to 301 CMR 10.00 (see 310 CMR 10.58(2)(a)3). On March 12, 1999, the EEA Secretary designated those portions of Sales Creek not within the City of Boston and the surrounding environs on the Project site as a densely developed area. Accordingly, the Riverfront Area on the Project site that is associated with Sales Creek is 25 feet wide. Riverfront Area does not have a 100 foot buffer zone.

Bordering Vegetated Wetlands (BVW)

According to the WPA regulations (310 CMR 10.55), BVWs are freshwater wetlands which border on creeks, rivers, streams, ponds and lakes. The types of freshwater wetlands are wet meadows, marshes, swamps and bogs. Bordering Vegetated Wetlands are areas where the soils are saturated and/or inundated such that they support a predominance of wetland indicator plants.

Epsilon delineated a total of eight (8) separate areas on the Project site that meet the regulatory definition of BVW. BVW has a 100 foot buffer zone under the WPA regulations. The BVWs delineated by Epsilon border on intermittent streams (drainage channels), Sales Creek or are otherwise hydologically connected to other BVWs via culverts and pipes. From a functions and values perspective, the BVWs on the Project site are generally degraded given their juxtaposition in a heavily developed urban environment. The primary function of these BVWs appears to be flood control, storm damage prevention and pollution attenuation. The BVWs are comprised primarily of invasive herbaceous and woody plant species including but not limited to common reed (Phragmites australis), multiflora rose (Rosa multiflora), buckthorn (Frangula alnus), and purple loosestrife (Lythrum salicaria). Non-invasive species include but are not limited to sweetgale (Myrica gale) and various sedges, rushes and grasses.

Two artificial man-made stormwater detention/retention basins located in the City of Revere were not classified as BVW or other jurisdictional wetland resource areas under the WPA (310 CMR 10.00) regulations because they do not meet the criteria to be regulated as inland wetland resource areas. In addition, the up-gradient intermittent stream that flows into the jurisdictional pond located in the racetrack infield in the City of Boston was also not classified as a WPA-jurisdictional wetland resource area per the definition of “stream” in 310 CMR 10.04.

Inland Bank and Land Under Water Bodies and Waterways

Inland Bank (310 CMR 10.54) and Land Under Water Bodies and Waterways (LUW) (310 CMR 10.56) on the Project site are associated with intermittent streams / drainage ditches, Sales Creek and the pond located in the center of the racetrack infield.

2.5 Total Maximum Daily Load (TMDL)

The project site discharges to the Chelsea River and Sales Creek, which are located within the Boston Harbor watershed. MassDEP has issued a Draft Pathogen Total Maximum Daily Load (TMDL) for the Boston Harbor Watershed (excluding the Neponset River). The TMDL addresses bacterial and other fecal-related pollution in the watershed. The proposed stormwater management system and long-term pollution prevention measures will minimize the discharge of pathogens to adjacent Resource Areas.

The proposed project will reduce impervious area and will not have any illicit sewer/septic discharges, thereby minimizing potential pathogen sources.

To reduce pathogens in the stormwater discharging from the project site a reduction in impervious area, bioretention basins, biofiltration swales, pervious pavers, and rainwater harvesting tanks are proposed. The proposed project meets the intent of the Draft TMDL to reduce pathogens discharging within the Boston Harbor Watershed.

2.6 Area of Critical Environmental Concern (ACEC)

An ACEC is an area designated by the EEA Secretary in accordance with 301 CMR 12.00 of the Coastal Zone Management (CZM) regulations. Sales Creek is associated with the Belle Isle Inlet that is within the Rumney Marshes ACEC. The ACEC extends through the Project site from approximately the northwest corner, passing between the proposed construction and the existing horse barns, through the northern portion of the racing track infield, and continuing east of the Project site.

2.7 Concentrated Animal Feeding Operation (CAFO)

Stormwater generated by the CAFO area ground surfaces is collected by a closed drainage system that is outed to a settling pond located in the infield of the racetrack. Water collected by this pond is then pumped to a sewer manhole located near the Suffolk Downs T station. Approximately 2.3 acres of CAFO will be converted to parking as part of the Project and stormwater from the new ground surface will no longer flow to the settling pond and sanitary sewer system. To represent this in the pre-development calculations, a 2.3 acre area of the CAFO ground surface is included in Subcatchment E3. This 2.3 acre area does not tie in to the site stormwater runoff discharge in the Pre-development calculations. In the post-development calculations, the runoff from this area will be incorporated into the stormwater management system.

Reducing the size of the CAFO ground surface will reduce the sanitary flows generated at the ground surface effectively increasing the capacity of the existing CAFO treatment system. This will contribute to the improvement of the Sales Creek water quality.

3.0 PROPOSED CONDITIONS

3.1 Project Description

Caesars Resort at Suffolk Downs is a redevelopment proposed on approximately 161 acres of land that will contain two distinct gaming areas (referred to herein as “Casino Area I” and “Casino Area II”), approximately 450 guestrooms in two hotels, a multi-purpose meeting/entertainment space, dedicated covered parking, fine dining, and retail space. The Proponent proposes to construct substantial infrastructure improvements on Route 1A in the vicinity of the Project site as an integral part of the Project. The Project elements are more specifically listed below:

- Two hotels: an approximately 300-room Hotel I and an approximately 150-room Hotel II;
- Multi-purpose meeting/entertainment space;
- Dining: approximately 16 restaurants including fine dining concepts, casual outlets, and a food court;
- Gaming Space: approximately 200,000 square feet of gaming space containing 4,000-5,000 slot machines, 200 table games, and a World Series of Poker™ room;
- Retail: approximately 30,000 square feet;
- Central Utility Plant (CUP); and
- Surface and structured parking.

The Project also involves continued operations at the Suffolk Downs racetrack including the operation of a horse barn and stable area.

The Project is anticipated to decrease the overall impervious area for the site by approximately 14 acres. Refer to Table 3 for a comparison of the existing and proposed land use for the Site.

Table 3. Proposed land use for the Project Site (in acres)

Land Use	Existing Site (acres)	Proposed Site (acres)	Change
Buildings	13.97	19.76	+5.79
Site Pavement	62.36	42.42*	-19.94
Gravel surface	11.97	10.48	-1.49
Grass/Open Space	52.11	64.10	+11.99
Woods	10.42	9.32	-1.10
Water Surface	2.68	2.68	-
Bioretention Basin	-	4.75**	+4.75
Total	153.51	153.51	---

*The Project includes porous pavement, which is conservatively included in the impervious area.
**The Project includes Bioretention Basins, which is conservatively modeled as CN=98.

3.2 Stormwater Management System

The Site will include the installation of a stormwater management system that is being designed to meet and exceed the MassDEP Stormwater Management Standards, the City of Boston stormwater requirements, and the City of Revere stormwater requirements. As a redevelopment, the Project is required to improve existing conditions to the maximum extent practicable. However, the project will result in a reduction in peak flows, removal of over 80% of Total Suspended Solids, the collection and infiltration of the equivalent of the 1" storm event over the proposed impervious area. The project will reduce the impervious area on the site by 14 acres, which is the most significant improvement to the stormwater management. In addition to the reduction in impervious area, the stormwater management system will incorporate water quality and treatment and infiltration.

The Project has been designed using environmentally sensitive site design and LID techniques. This design prevents the generation of stormwater and non-point source pollution by reducing

impervious surfaces, disconnecting flow paths with biofiltration swales, treating and infiltrating stormwater at bioretention basins, and protecting natural processes taking place in the surrounding resource areas. Stormwater systems have been designed to model natural hydrologic features, including promoting infiltration throughout the site.

The proposed stormwater management system for the Project Site will include three sizable rainwater harvesting cisterns capable of collecting up to 270,000 gallons, porous pavers, deep sump and hooded catch basins, infiltrating bioretention basins with sediment forebays, biofiltration swales, and proprietary water quality structures. Overflow from the proposed BMPs will be discharged to the existing design points using stormwater outfalls. Stormwater outfalls that discharge to Sales Creek will include rip rap aprons to prevent erosion, and the outfalls at the wetland design points will use level spreaders to promote sheet flow between the outfall and wetland resource area.

The existing drainage system in the CAFO area will be protected and maintained. The recent stormwater improvements associated with the site including the horse track improvements, and the sediment sump parallel to Sales Creek to the north of the horse track will be protected and maintained.

Reduction in Impervious Area

The reduction in impervious area from the pre-development to post-development condition will significantly improve stormwater runoff from the site by reducing rates and volume of runoff leaving the site. The reduction in volume directly contributes to an increase in groundwater recharge. The annual recharge from the post-development site will exceed the annual recharge from pre-development conditions solely by reducing the impervious area. By reducing runoff volume and increasing recharge volume, there will be more infiltration which will provide water quality treatment improving the quality of water entering Sales Creek. In other words, in the post-development condition, there will be more groundwater base flow entering Sales Creek and less ground cover generated runoff.

Bioretention Basin with Sediment Forebay

Six (6) bioretention basins are proposed to treat stormwater runoff where feasible on the proposed site. This includes stormwater runoff generated by the southern half of the proposed Tomasello Road, the south parking lot, the drop-off circle at the building main entrance, and surrounding walkways and plaza areas. The bioretention basins include a minimum 30-inch media filter to provide TSS and nutrient pollutant removal and will provide infiltration.

Pretreatment for the bioretention basin will be provided by deep sump and hooded catch basins and a sediment forebay. The sediment forebays are designed in accordance with the MassDEP Stormwater Management Handbook to provide a water quality volume (WQV) equivalent to 0.1 inches per impervious acre.

Biofiltration Swales

Biofiltration swales (or Grassed Channels) will be used to break up the impervious area and provide pretreatment in the north parking lot. Due to the level of activity in this parking lot, the biofiltration swales will be lined to prevent infiltration. Therefore, the biofiltration swales will provide water quality treatment only.

Porous Pavers

Porous pavers are proposed in areas that will not be highly trafficked. These areas will be used as pedestrian areas with minimal vehicle activity. Porous pavers are not proposed in the high intensity

use parking areas. The porous pavers will replace traditional impervious concrete and allow runoff to be treated and infiltrated within the pavement section.

Rainwater Harvesting

Stormwater runoff from the roofs of the buildings and some parking garage areas will be collected and stored in three large rainwater harvesting tanks. Rainwater harvesting tanks are located in three areas. Tank 1 will be located to the front of Casino II and will be sized to collect up to 80,000 gallons. This tank will collect stormwater generated from the roof of Casino II and be used for irrigation water. Tank II will be located in the plaza area between the garage and Casino I and will be sized to collect up to 130,000 gallons. It will collect stormwater generated by the proposed garage and approximately half of Casino I. This water will be used to supply cooling tower water as well as irrigation water. Tank III will be located between Casino I and the track. Tank II will collect up to 60,000 gallons per day and will supply water to be used for irrigation water and track watering. The proposed tanks will be capable of storing up to 270,000 gallons and is estimated to reduce potable water demand by up to 4.5 million gallons per year.

The level water in the rainwater harvesting tanks will be variable at the time of rainfall events, therefore, to provide a conservative analysis the tanks are considered full for the purposes of HydroCAD calculations.

Deep Sump and Hooded Catch Basins

Deep sump and hooded catch basins are proposed to provide pretreatment in the impervious areas of the parking lot and roadway. Catch basins will also be installed within the bioretention areas as overflow devices.

Stormceptor® Water Quality Structures

Stormceptor® water quality structures will be used for water quality pretreatment in areas of the Site where space is limited or additional pretreatment is required prior to discharge. These BMPs have been designed to remove greater than 80% TSS. Generally, Stormceptor water quality units will be used to treat runoff generated by the parking area that discharge directly to Sales Creek.

Stormwater Discharge with Level Spreader

A level spreader will be included at stormwater discharge locations near BVWs. These level spreaders will receive concentrated flow and convert it to sheet flow so it can disperse uniformly across a stable slope. The level spreaders will improve the efficiency of all other BMPs on site.

Refer to the TSS Removal spreadsheets in Appendix A for TSS removal summaries for each treatment train.

3.3 Stormwater Management During Construction

The Site Contractor will be responsible for stormwater management of the active construction site and is required to adhere to the conditions of the 2012 Construction General Permit under the Environmental Protection Agency. A draft SWPPP has been prepared in accordance with the MassDEP Stormwater Management Standards and the 2012 Construction General Permit (Appendix E).

3.4 Low Impact Development (LID)

An important principle of LID is minimizing impervious area in order to manage stormwater as close to the source as possible. The Project site reduces the total impervious cover by 14 acres, thereby restoring a significant portion of the existing site to natural ground covers which help treat stormwater as a resource rather than a waste product. The main treatment BMP's used to treat

stormwater runoff from the proposed impervious area are Bioretention Basins. Bioretention Basins treat stormwater closer to the source than other treatment options and use designed soil media to mimic the natural movement of water within the soil profile for treatment and groundwater recharge. Other elements of the site design that treat runoff close to or at the source are porous pavers and biofiltration swales. Because the project site is considered a LUHPPL the biofiltration swales will be lined and considered a pretreatment BMP.

3.5 City of Boston Stormwater Requirements

The City of Boston requires that a volume of stormwater runoff equivalent to one (1) inch times the impervious area of the proposed site be captured for infiltration or use on site. The Project Bioretention Basins are designed to have a static holding capacity that meets this regulation (See Appendix A: Standard 3 Recharge Volume Calculations). In addition, a series of rainwater harvesting cisterns are proposed that will have a capacity of 270,000 gallons.

There are no new connections proposed to the Boston Water and Sewer Commission storm drain or sewer system.

4.0 STORMWATER MANAGEMENT ANALYSIS

4.1 Methodology

Nitsch Engineering completed a hydrologic analysis of the existing project site utilizing Soil Conservation Service (SCS) Runoff Curve Number (CN) methodology. The SCS method calculates the rate at which the runoff reaches the design point considering several factors: the slope and flow lengths of the subcatchment area, the soil type of the subcatchment area, and the type of surface cover in the subcatchment area. HydroCAD Version 10.00 computer modeling software was used in conjunction with the SCS method to determine the peak runoff rates and runoff volumes for the 2-, 10-, 25-, 50-, and 100-year, 24-hour storm events. The proposed project site is being analyzed with the same methodology.

The Site was divided into multiple drainage areas, or subcatchments, which drain to the design points along the property boundary and within the site. For each subcatchment area, SCS Runoff Curve Numbers (CNs) were selected by using the cover type and hydrologic soil group of each area. The peak runoff rates and runoff volumes for the 2-, 10-, 25- and 100-year 24-hour storm events were then determined by inputting the drainage areas, CNs, and time of concentration (T_c) into the HydroCAD model.

4.2 HydroCAD Version 10.00

The HydroCAD computer program uses SCS and TR-20 methods to model drainage systems. TR-20 (Technical Release 20) was developed by the Soil Conservation Service to estimate runoff and peak discharges in small watersheds. TR-20 is generally accepted by engineers and reviewing authorities as the standard method for estimating runoff and peak discharges.

HydroCAD Version 10.00 uses up to four types of components to analyze the hydrology of a given site: subcatchments, reaches, basins, and links. Subcatchments are areas of land that produce surface runoff. The area, weighted CN, and T_c characterize each individual subcatchment area. Reaches are generally uniform streams, channels, or pipes that convey water from one point to another. A basin is any impoundment that fills with water from one or more sources and empties via an outlet structure. Links are used to introduce hydrographs into a project from another source or to provide a junction for more than one hydrograph within a project.

The time span for the model was set for 0-48 hours in order to prevent truncation of the hydrograph.

Modeling of Porous Pavers Section

For a conservative analysis approach the porous pavers are considered impervious with a CN of 98.

Modeling of Rainwater Harvest Cisterns

The HydroCAD model assumes that the cisterns are full at the time of a storm event, therefore the rainwater flow entering the tank is equal to the flow exciting the tanks at the overflows.

Modeling of Bioretention Basins

The surface area of the Bioretentino Basins are conservatively assumed to have a CN of 98.

4.3 Precipitation Data

Nitsch Engineering, Inc. used Technical Paper 40 by the National Weather Service to estimate the rainfall for the 2-year, 10-year, 25-year, 50-year, and 100-year 24-hour storms. The rainfall values for Suffolk County that are used are as follows:

Table 4. Suffolk County Rainfall

Storm Event	24-hour rainfall (inches)
2-year	**3.2**
10-year	**4.6**
25-year	**5.5**
50-year	**6.0**
100-year	**6.6**

4.4 Existing Hydrologic Conditions

As summarized in Table 4, Nitsch Engineering delineated the project site into three (3) on-site subcatchment (watershed) areas discharging to three (3) design points utilizing an existing conditions survey and on-site observations (See Figure C.DR.01). Table 5 summarizes the design point, location and area of each watershed. The design points (DP) are defined as the culvert under route 1A (DP1), the wetland to the southeast of the track (DP2), and the Sales Creek (DP3). The HydroCAD model for existing conditions is provided in Appendix B.

Table 5. Existing Drainage Area Summary

Design Point	Subcatchment	Area (acres)	Description
DP1	E1	33.25	Area to culvert under Route 1A
DP2	E2	16.95	Area to wetland southeast of track
DP3	E3	103.31	Area to Sales Creek

Total Area	**153.51**

Route 1A Culvert Discharge – Design Point

Stormwater runoff from a western portion of the site identified as Subcatchment E1 discharges from the site via a culvert under Route 1A and a subsequent channel which conveys runoff to the Chelsea River.

Runoff from the existing parking lots in in E1 travels overland over pavement directly to one of two wetland systems located within the subcatchment. The wetland systems are hydraulically connected via a 24-inch pipe. There is no peak flow attenuation, water quality treatment and negligible groundwater recharge prior to discharging to the wetland systems.

Sales Creek – Design Point

Stormwater runoff from the majority of the site discharges from the site via Sales Creek. The area that contributes to this discharge is represented as Subcatchment E3. Sales Creek flows through the site via a series of 96-inch culverts. Downstream from the site, Sales Creek passess under the MBTA Blue Line tracks and passes tidal gates upstream from Bennington Street in Revere. Sales Creek discharges to Bell Isle Inlet downstream of Bennington Street. Sales Creek and Bell Isle inlet are within the Rumney Marshes Area of Critical Environmental Concern (ACEC). See Section 2.6 for additional discussion on this ACEC.

Runoff from the horse track in is collected and conveyed to a series of sand filters for treatment prior to discharge to Sales Creek. These sand filters are part of a recent stormwater improvement project and will be protected and maintained in the post-development condition. See Section 2.7 for additional information. Runoff generated in this subcatchment that does not enter the sand filter system travels overland directly to Sales Creek, or to the pond located in the infield of the horse track.

Runoff that is generated from either roof area of the existing simulcast/ grandstand building or the area between this building and the horse track and the ground surface in this area is collected with a closed drainage system via roof drains or surface inlets and is conveyed to a discharge in Sales Creek.

Runoff that is generated by the roof area located in the CAFO is conveyed and discharged to Sales Creek. Ground surface area in the CAFO was excluded from the stormwater calculations. Runoff generated at the ground surface is discharged to the sanitary sewer system as part of a recent stormwater improvement project. A relatively small portion of the CAFO (approximately 2.3 acres) will be developed in the post-development condition. This area was included in the pre-development calculations to account for the increase in total analysis area.

Runoff from a parking lot and a paved maintenance area travels overland to a sediment forebay that is part of the recent stormwater improvement project. The sediment forebay discharges to Sales Creek. The sediment forebay will be protected and maintained in the post-development condition.

Wetland South of Track

Stormwater runoff from a southern portion of the site identified as Subcatchment E2 discharges to a wetland on the southeast side of the horse track. The wetland is located between the horse track and the MBTA Blue line tracks and is hydraulically connected to Sales Creek.

4.5 Proposed Hydrologic Conditions

The proposed project has been designed to mitigate the change in stormwater runoff at each of the design points as required by the DEP Stormwater Management Standards. The existing watershed areas were modified to reflect the proposed topography, storm drainage structures and BMPs, and roof areas.

Table 6. Proposed Drainage Area Summary

Design Point	Watershed	Area (acres)	Description	Proposed Treatment BMP(s)
DP1	P1	35.01	Area to culvert under Route 1A	Bioretention Basins
DP2	P2	16.95	Area to wetland southeast of track	Bioretention Basins
DP3	P3	101.55	Area to Sales Creek	Bioretention Basins or Stormceptors
Total Area		153.51		

4.6 Peak Flow Rates

The proposed stormwater management system is expected to reduce the proposed peak runoff rates to at or below the existing rates for Design Points DP1, DP2, and DP3. Tables 6 through 10 below summarize the existing and proposed hydrologic analyses for the site at each design point.

Table 6 – Peak Rates of Runoff for Design Point DP1 (in cfs)

Storm Event	2-year	10-year	25-year	100-year
Existing	73.89	121.60	152.44	190.04
Proposed	68.42	117.74	150.10	189.78

Table 7 – Peak Rates of Runoff for Design Point DP2 (in cfs)

Storm Event	2-year	10-year	25-year	100-year
Existing	39.20	63.60	79.30	98.42
Proposed	37.67	61.99	77.71	96.88

Table 8 – Peak Rates of Runoff for Design Point DP3 (in cfs)

Storm Event	2-year	10-year	25-year	100-year
Existing	238.91	387.62	483.35	599.88

Proposed	225.67	371.69	465.58	580.40

Table 9 – Peak Rates of Runoff for Total Site (in cfs)

Storm Event	2-year	10-year	25-year	100-year
Existing	351.99	572.82	715.10	888.34
Proposed	331.75	551.12	693.38	867.05

Table 10 –Volumes of Runoff for Total Site (in acre-feet)

Storm Event	2-year	10-year	25-year	100-year
Existing	25.32	41.82	52.74	66.28
Proposed	23.82	40.00	50.78	64.19

5.0 MassDEP Stormwater Management Standards

The Project is a development on a previously developed site that will result in a *decrease* in impervious area, and therefore is considered a ***redevelopment*** as defined in the MassDEP Stormwater Management Standards.

Since the project is a redevelopment project, it will be required to meet the following Stormwater Management Standards to the maximum extent practicable: Standard 2, Standard 3, and the pretreatment and structural best management practice requirements of Standards 4, 5, and 6. Existing stormwater discharges will comply with Standard 1 only to the maximum extent practicable. A redevelopment project shall also comply with all other requirements of the Stormwater Management Standards and improve existing conditions.

The Site will be designed to meet and exceed the MassDEP Stormwater Management Standards as summarized below:

Standard 1: *No new stormwater conveyances (e.g. outfalls) may discharge untreated stormwater directly to or cause erosion in wetlands or waters of the Commonwealth.*

Compliance: The Project will not discharge any untreated stormwater directly to or cause erosion in wetlands or waters of the Commonwealth. Stormwater from the Site will be collected and treated in accordance with the MassDEP Stormwater Management Standards and stormwater outfalls will be stabilized to prevent erosion. This is a significant improvement from existing conditions.

Water quality treatment BMPs have been incorporated into the stormwater management system to provide increased TSS removal over the existing conditions. Bioretention basins, deep sump and hooded catch basins, proprietary hydrodynamic seperators, and biofiltration swales have been incorporated into the design and sized to provide at least 80% TSS removal. The BMP sizing calculations are included with this report in Appendix A. The rip rap at the new outfalls will be designed so there is no erosion or scour at the outfall and into the wetlands or Sales Creek.

Standard 2: *Stormwater management systems shall be designed so that the post-development peak discharge rates do not exceed pre-development peak discharge rates. This Standard may be waived for discharges to land subject to coastal storm flowage as defined in 310 CMR 10.04.*

Compliance: The proposed stormwater management system will be designed so that the post-development peak discharge rates do not exceed pre-development peak discharge rates at the design points and for the site as a whole. To prevent storm damage and downstream flooding, the proposed stormwater management practices will mitigate peak runoff rates for the 2-, 10-, 25-, 50- and 100-year, 24-hour storm events.

The reduction in impervious area in the post-development condition will also reduce the volume of stormwater being discharged from the site for the 2-, 10-, 25-, 50-, and 100-year, 24-hours storm event, exceeding the requirements of Standard 2.

Standard 3: *Loss of annual recharge to groundwater shall be eliminated or minimized through the use of environmentally sensitive site design, low impact development techniques, stormwater BMPs, and good operation and maintenance. At a minimum, the annual recharge from the post-development site shall approximate the annual recharge from pre-development conditions based on soil type. This Standard is met when the stormwater management system is designed to infiltrate the required recharge volume as determined in accordance with the Massachusetts Stormwater Handbook.*

Compliance: The project will comply with this standard. The Site was designed using environmentally-sensitive site design, low impact development techniques, and stormwater BMP treatment trains to improve the recharge to groundwater. The annual recharge from the post-development site will exceed the annual recharge from pre-development conditions based on soil type using the guidelines provided in the MassDEP Stormwater Management Handbook.

The Project will improve groundwater recharge on site. The Project will not create more impervious area on site and therefore no groundwater recharge is required based on the MassDEP Stormwater Management Standards. However, the use of low impact development techniques will provide groundwater recharge. Also, the bioretention basins are designed to retain and infiltrate 1-inch times the impervious area of the site in order to meet the City of Boston Stormwater requirements.

Table 11 – Proposed Recharge Volumes for Stormwater BMPs

Infiltration BMP	Recharge Volume (cf)
Bioretention Basin 1	52,219
Bioretention Basin 2	50,614
Bioretention Basin 3	15,247
Bioretention Basin 4	29,414
Bioretention Basin 5	49,160
Bioretention Basin 6	26,004
Total	**222,658**

Standard 4: *Stormwater management systems shall be designed to remove 80% of the average annual post-construction load of Total Suspended Solids (TSS). This standard is met when:*

Suitable practices for source control and pollution prevention are identified in a long-term pollution prevention plan, and thereafter are implemented and maintained; Structural stormwater BMPs are sized to capture the required water quality volume as determined in accordance with the Massachusetts Stormwater Handbook; and Pretreatment is provided in accordance with the Massachusetts Stormwater Handbook.

Compliance: The proposed stormwater management system will be designed to remove greater than 80% of the average annual post-construction load of Total Suspended Solids (TSS). Structural stormwater BMPs including deep sump and hooded catch basins, bioretention basins, porous pavers, biofiltration swales and Stormceptor® water quality units are sized to capture the required water quality volume (1 inch over the project site impervious area) and remove a minimum of 80% of total suspended solids.

The project is a redevelopment and therefore the pretreatment and structural best management practice requirements of Standard 4 shall be met to the maximum extent practical.

The proposed water quality treatment BMPs are subject to the 44% TSS removal pretreatment requirement and the 1-inch rule for calculating water quality volumes because the site is considered a land uses with higher potential pollutant loads (see Standard 5).

Pretreatment for all infiltration BMPs will meet or exceed the 44% TSS removal requirement. The treatment train for runoff that is not directed to an infiltration BMP will include at a minimum deep sump hooded catch basins, and a proprietary treatment device to remove at least 80% TSS prior to discharge to Sales Creek. Lined biofiltration swales will also be used in parking lot islands prior to the deep sump hooded catch basins where enough space is available. TSS removal calculation spreadsheets and Stormceptor® sizing calculations are provided in Appendix A.

Source control and pollution prevention measures, such as vacuum cleaning, street sweeping, proper snow management, and stabilization of eroded surfaces, are included in the Long-Term Pollution Prevention Plan and Operation and Maintenance Plan (Appendix E).

Standard 5: *For land uses with higher potential pollutant loads, source control and pollution prevention shall be implemented in accordance with the Massachusetts Stormwater Handbook to eliminate or reduce the discharge of stormwater runoff from such land uses to the maximum extent practicable. If, through source control and/or pollution prevention, all land uses with higher potential pollutant loads cannot be completely protected from exposure to rain, snow, snow melt and stormwater runoff, the proponent shall use the specific structural stormwater BMPs determined by the Department to be suitable for such uses as provided in the Massachusetts Stormwater Handbook. Stormwater discharges from land uses with higher potential pollutant loads shall also comply with the requirements of the Massachusetts Clean Waters Act, M.G.L.c. 21, §§ 26-53 and the regulations promulgated there under at 314 CMR 3.00, 314 CMR 4.00 and 314 CMR 5.00.*

Compliance: The parking lots associated with the site are considered high-intensity-use and Land Uses with Higher Potential Pollutant Loads (LUHPPLs) as defined by MassDEP. These areas of the project are classified as a LUHPPL based on average daily vehicle trips anticipated to be generated by the proposed Project.

The project is a redevelopment and therefore the pretreatment and structural best management practice requirements of Standard 5 shall be met to the maximum extent practical.

The treatment train for the portions of the parking lot that do not flow to the bioretention areas include Stormceptor proprietary treatment devices which capture sediments as well as free oil.

The treatment trains for the remaining parking lot areas include deep sump hooded catch basins and sediment forebays prior to the bioretention areas.

Standard 6: *Stormwater discharges within the Zone II or Interim Wellhead Protection Area of a public water supply and stormwater discharges near or to any other critical area require the use of the specific source control and pollution prevention measures and the specific structural stormwater best management practices determined by the Department to be suitable for managing discharges to such areas, as provided in the Massachusetts Stormwater Handbook. A discharge is near a critical area if there is a strong likelihood of a significant impact occurring to said area, taking into account site-specific factors. Stormwater discharges to Outstanding Resource Waters and Special Resource Waters shall be removed and set back from the receiving water or wetland and receive the highest and best practical method of treatment. A "storm water discharge" as defined in 314 CMR 3.04(2)(a)1. or (b) to an Outstanding Resource Water or Special Resource Water shall comply with 314 CMR 3.00 and 314 CMR 4.00.*[1] *Stormwater discharges to a Zone I or Zone A are prohibited unless essential to the operation of the public water supply.*

Compliance: The Project discharges to Sales Creek which is part of the Rumney Marshes Area of Critical Environmental Concern.

The project is a redevelopment and therefore the pretreatment and structural best management practice requirements of Standard 6 shall be met to the maximum extent practical.

The pretreatment Best Management Practices were selected from Table CA 2: Standard 6 of the Massachusetts Stormwater Handbook and include deep sump hooded catch basins, sediment forebays, and biofiltration swales in selected portions of the project. Table CA 2 indicates appropriate BMP's for use on sites with stormwater discharges to Outstanding Resource Waters. The main treatment BMP's are exfiltration Bioretention Basins, which are included in Table CA 2.

Standard 7: *A redevelopment project is required to meet the following Stormwater Management Standards only to the maximum extent practicable: Standard 2, Standard 3, and the pretreatment and structural stormwater best management practice requirements of Standards 4, 5, and 6. Existing stormwater discharges shall comply with Standard 1 only to the maximum extent practicable. A redevelopment project shall also comply with all other requirements of the Stormwater Management Standards and improve existing conditions.*

Compliance: Since the Project is a redevelopment project, the following Stormwater Management Standards will be met to the maximum extent practicable: Standard 2, Standard 3, and the pretreatment and structural best management practice requirements of Standards 4, 5, and 6 (see compliance narrative for Standards 2, 3, 4, 5, and 6). Existing stormwater discharges will comply with Standard 1 only to the maximum extent practicable (see compliance narrative for Standard 1). This project will comply with all other requirements of the Stormwater Management Standards and improve existing conditions (see compliance narratives for Standards 8, 9, and 10).

Standard 8: *A plan to control construction-related impacts, including erosion, sedimentation, and other pollutant sources during construction and land disturbance activities (construction period erosion, sedimentation, and pollution prevention plan) shall be developed and implemented.*

[1] If an NPDES Construction General Permit or Multi-Sector General Permit is required for a discharge to an ORW, DEP must approve the Stormwater Pollution Prevention Plan (SWPPP).

Compliance: The project will comply with this standard. Sedimentation and erosion controls will be incorporated as part of the design of this project and employed during site construction. Land disturbance will be kept to a minimum and the phasing of the work will be planned so that only the areas actively being developed are exposed. All other areas should have natural vegetation preserved, have good temporary cover, or permanent vegetation established. Permanent structures, temporary or permanent vegetation, and mulch/erosion netting should be employed, as quickly as possible after land is disturbed. Disturbed areas will be protected from stormwater runoff by installing erosion control or stormwater management measures to prevent water from entering and running over disturbed areas, and to prevent erosion damage to downstream facilities. Perimeter control practices will be installed to isolate the construction site from surrounding areas. Siltation fence, temporary covers for drainage structures, and temporary settlement basin will be utilized where applicable.

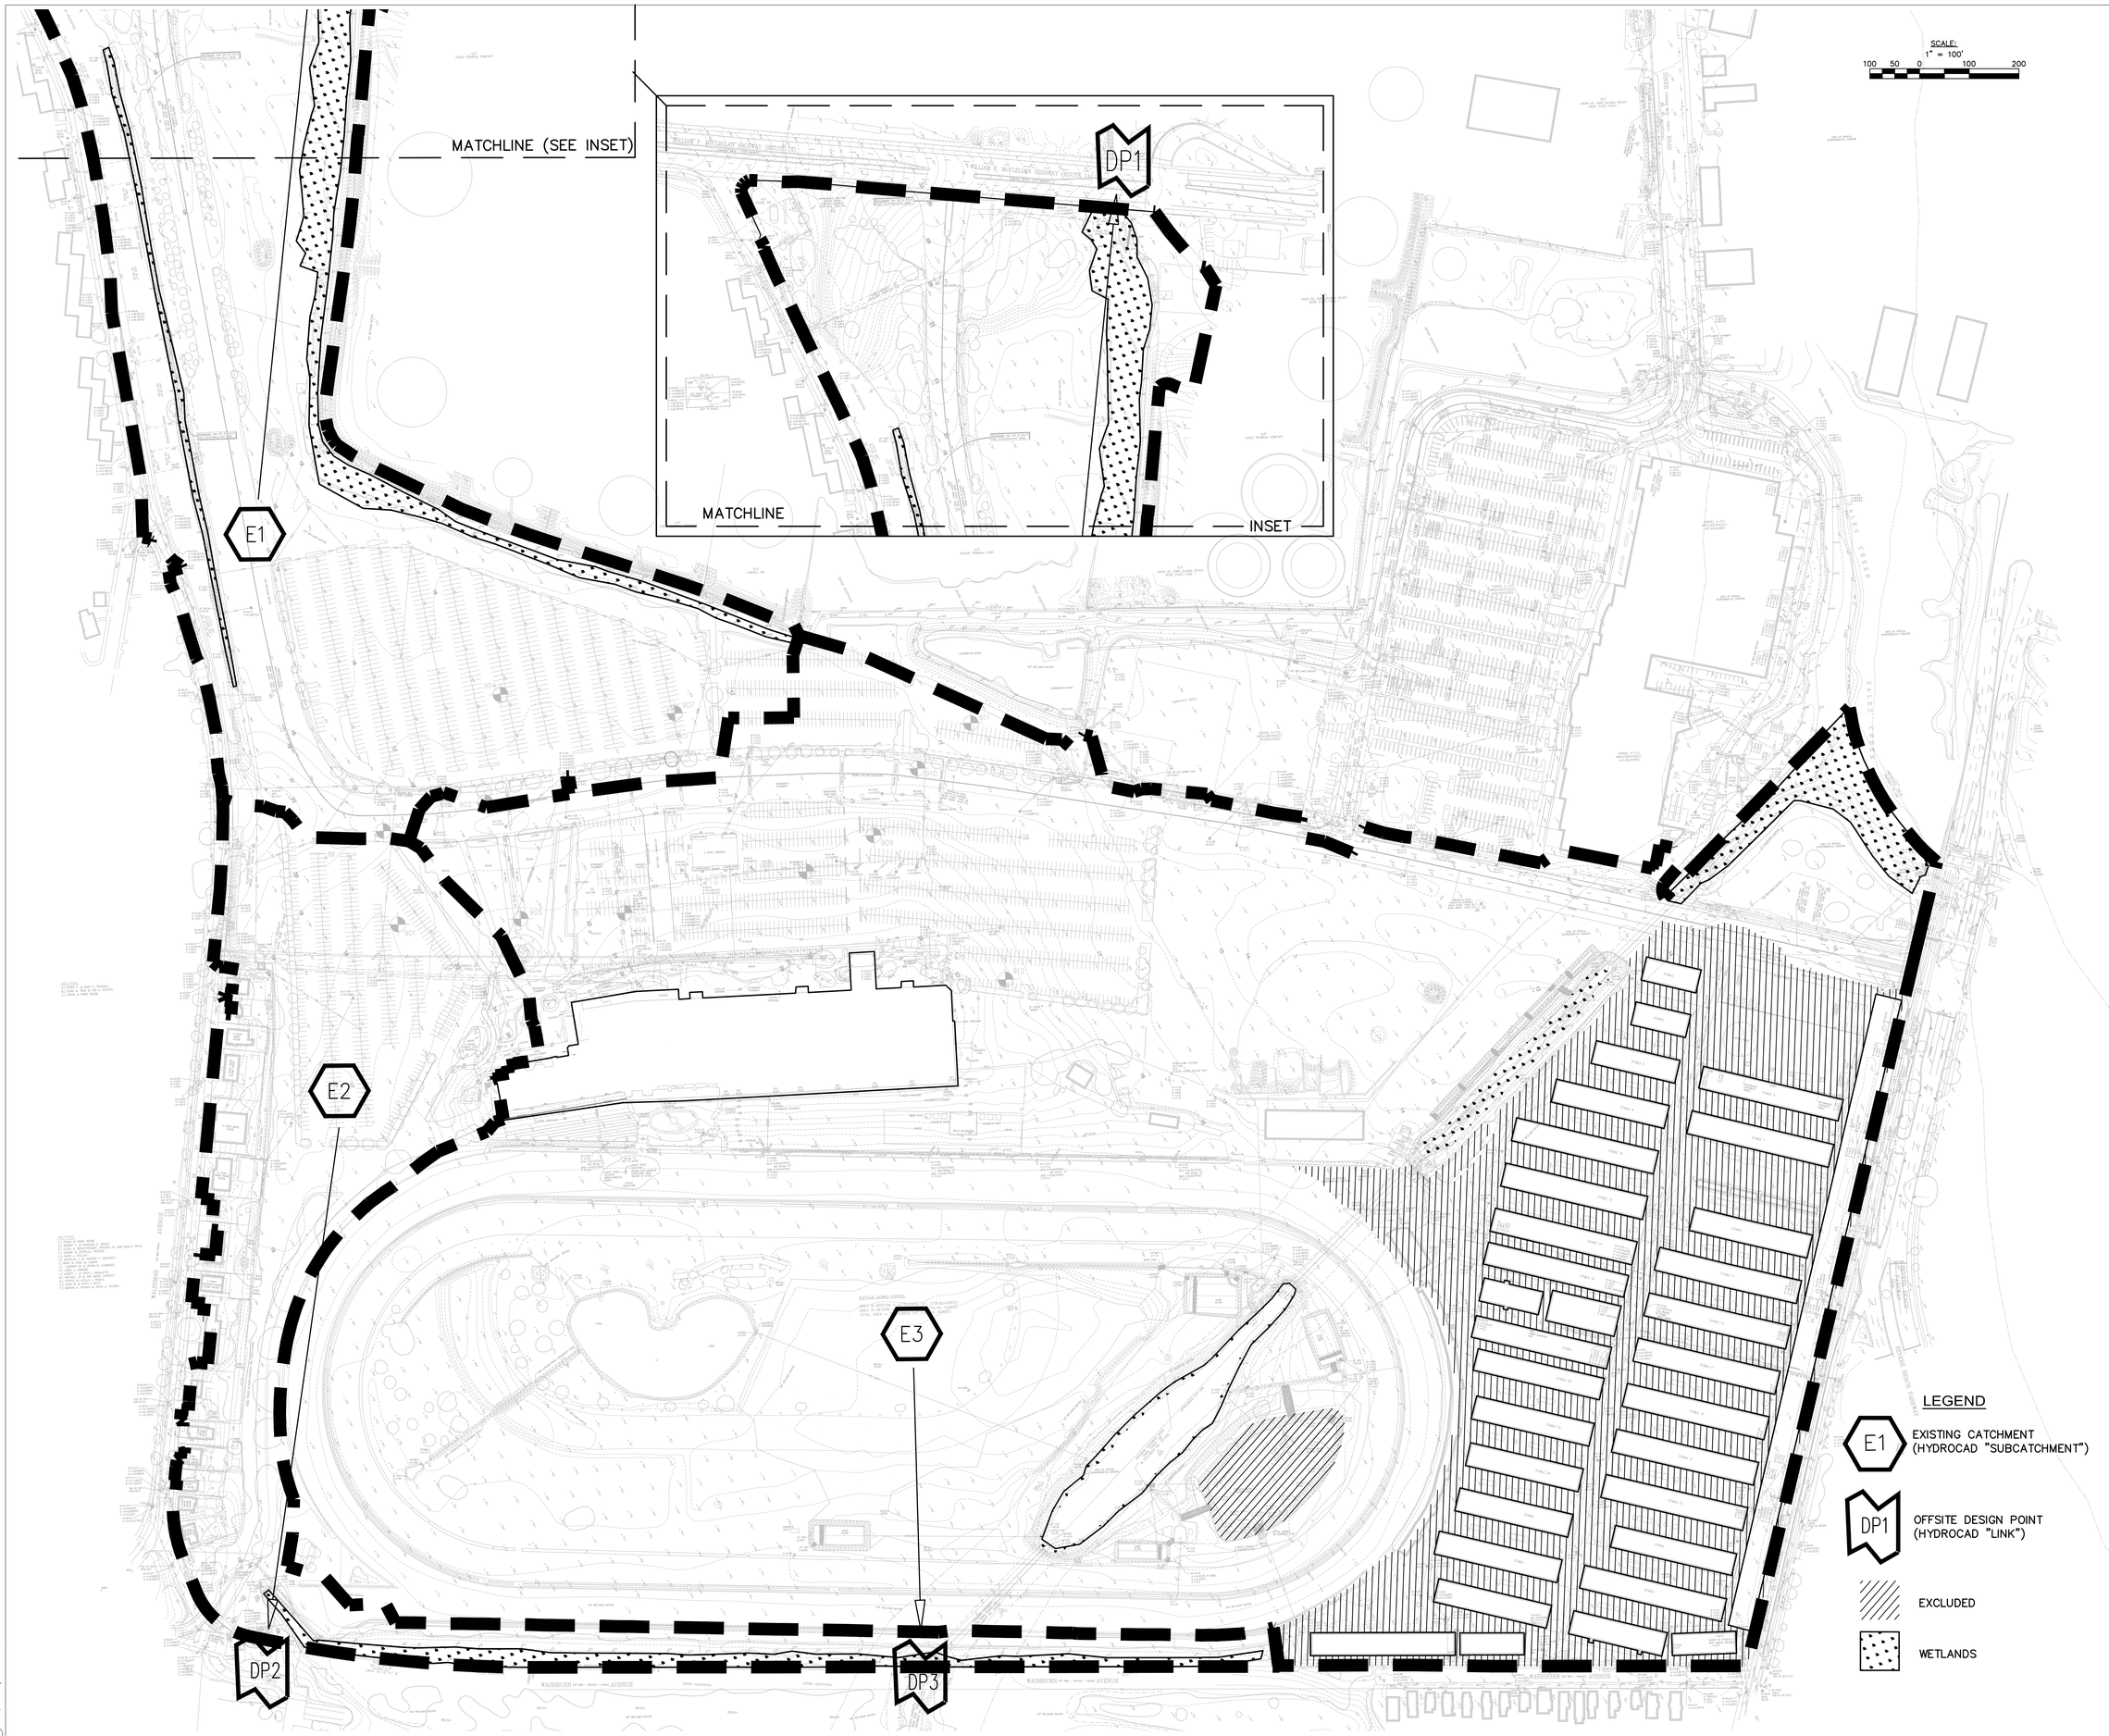
Since the Project will disturb more than one (1) acre of land, a Notice of Intent will be submitted to the Environmental Protection Agency (EPA) for coverage under the National Pollution Discharge Elimination System (NPDES) Construction General Permit. As part of this application the Applicant is required to prepare a Stormwater Pollution Prevention Plan (SWPPP) and implement the measures in the SWPPP. The SWPPP, which is to be kept on site, includes erosion and sediment controls (stabilization practices and structural practices), temporary and permanent stormwater management measures, Contractor inspection schedules and reporting of all SWPPP features, materials management, waste disposal, off-site vehicle tracking, spill prevention and response, sanitation, and non-stormwater discharges. A draft SWPPP is provided in Appendix E.

Standard 9: *A Long -Term Operation and Maintenance (O&M) Plan shall be developed and implemented to ensure that stormwater management systems function as designed.*
Compliance: A post-construction operation and maintenance plan has been prepared and will be implemented to ensure that stormwater management systems function as designed. Source control and stormwater BMP operation requirements for the academic campus are summarized in the Long-Term Pollution Prevention Plan and Operation and Maintenance Plan provided in Appendix D.

Standard 10: *All illicit discharges to the stormwater management system are prohibited.*
There will be no illicit discharges to the stormwater management system associated with the Project. An Illicit Discharge Compliance Statement is provided in Appendix A.

6.0 CLOSED DRAINAGE SYSTEM DESIGN

The proposed closed drainage system will consist of deep sump and hooded catch basins, drainage manholes, and proprietary water quality treatment units connected with corrugated polyethylene pipe. The closed drainage system will be designed to convey the 10-year storm event using the Rational method.



7.0 CONCLUSION

In conclusion, the Project's stormwater management system will reduce peak runoff rates and volumes, and increase the stormwater quality. In addition, the peak runoff rates and volumes will be further reduced and the water quality increased through the use of stormwater Best Management Practices. Environmentally sensitive site design and low impact development techniques will be implemented throughout the Site. The Project is being designed to meet and exceed the MassDEP Stormwater Management Standards City of Boston, and City of Revere regulations.

Checklist for Stormwater Report

A. Introduction

Important: When filling out forms on the computer, use only the tab key to move your cursor - do not use the return key.

A Stormwater Report must be submitted with the Notice of Intent permit application to document compliance with the Stormwater Management Standards. The following checklist is NOT a substitute for the Stormwater Report (which should provide more substantive and detailed information) but is offered here as a tool to help the applicant organize their Stormwater Management documentation for their Report and for the reviewer to assess this information in a consistent format. As noted in the Checklist, the Stormwater Report must contain the engineering computations and supporting information set forth in Volume 3 of the Massachusetts Stormwater Handbook. The Stormwater Report must be prepared and certified by a Registered Professional Engineer (RPE) licensed in the Commonwealth.

The Stormwater Report must include:

- The Stormwater Checklist completed and stamped by a Registered Professional Engineer (see page 2) that certifies that the Stormwater Report contains all required submittals.[1] This Checklist is to be used as the cover for the completed Stormwater Report.
- Applicant/Project Name
- Project Address
- Name of Firm and Registered Professional Engineer that prepared the Report
- Long-Term Pollution Prevention Plan required by Standards 4-6
- Construction Period Pollution Prevention and Erosion and Sedimentation Control Plan required by Standard 8[2]
- Operation and Maintenance Plan required by Standard 9

In addition to all plans and supporting information, the Stormwater Report must include a brief narrative describing stormwater management practices, including environmentally sensitive site design and LID techniques, along with a diagram depicting runoff through the proposed BMP treatment train. Plans are required to show existing and proposed conditions, identify all wetland resource areas, NRCS soil types, critical areas, Land Uses with Higher Potential Pollutant Loads (LUHPPL), and any areas on the site where infiltration rate is greater than 2.4 inches per hour. The Plans shall identify the drainage areas for both existing and proposed conditions at a scale that enables verification of supporting calculations.

As noted in the Checklist, the Stormwater Management Report shall document compliance with each of the Stormwater Management Standards as provided in the Massachusetts Stormwater Handbook. The soils evaluation and calculations shall be done using the methodologies set forth in Volume 3 of the Massachusetts Stormwater Handbook.

To ensure that the Stormwater Report is complete, applicants are required to fill in the Stormwater Report Checklist by checking the box to indicate that the specified information has been included in the Stormwater Report. If any of the information specified in the checklist has not been submitted, the applicant must provide an explanation. The completed Stormwater Report Checklist and Certification must be submitted with the Stormwater Report.

[1] The Stormwater Report may also include the Illicit Discharge Compliance Statement required by Standard 10. If not included in the Stormwater Report, the Illicit Discharge Compliance Statement must be submitted prior to the discharge of stormwater runoff to the post-construction best management practices.

[2] For some complex projects, it may not be possible to include the Construction Period Erosion and Sedimentation Control Plan in the Stormwater Report. In that event, the issuing authority has the discretion to issue an Order of Conditions that approves the project and includes a condition requiring the proponent to submit the Construction Period Erosion and Sedimentation Control Plan before commencing any land disturbance activity on the site.

Massachusetts Department of Environmental Protection
Bureau of Resource Protection - Wetlands Program

Checklist for Stormwater Report

B. Stormwater Checklist and Certification

The following checklist is intended to serve as a guide for applicants as to the elements that ordinarily need to be addressed in a complete Stormwater Report. The checklist is also intended to provide conservation commissions and other reviewing authorities with a summary of the components necessary for a comprehensive Stormwater Report that addresses the ten Stormwater Standards.

Note: Because stormwater requirements vary from project to project, it is possible that a complete Stormwater Report may not include information on some of the subjects specified in the Checklist. If it is determined that a specific item does not apply to the project under review, please note that the item is not applicable (N.A.) and provide the reasons for that determination.

A complete checklist must include the Certification set forth below signed by the Registered Professional Engineer who prepared the Stormwater Report.

Registered Professional Engineer's Certification

I have reviewed the Stormwater Report, including the soil evaluation, computations, Long-term Pollution Prevention Plan, the Construction Period Erosion and Sedimentation Control Plan (if included), the Long-term Post-Construction Operation and Maintenance Plan, the Illicit Discharge Compliance Statement (if included) and the plans showing the stormwater management system, and have determined that they have been prepared in accordance with the requirements of the Stormwater Management Standards as further elaborated by the Massachusetts Stormwater Handbook. I have also determined that the information presented in the Stormwater Checklist is accurate and that the information presented in the Stormwater Report accurately reflects conditions at the site as of the date of this permit application.

Registered Professional Engineer Block and Signature

Signature and Date

Checklist

Project Type: Is the application for new development, redevelopment, or a mix of new and redevelopment?

☐ New development

☒ Redevelopment

☐ Mix of New Development and Redevelopment

Checklist for Stormwater Report

Checklist (continued)

LID Measures: Stormwater Standards require LID measures to be considered. Document what environmentally sensitive design and LID Techniques were considered during the planning and design of the project:

☒ No disturbance to any Wetland Resource Areas

☐ Site Design Practices (e.g. clustered development, reduced frontage setbacks)

☒ Reduced Impervious Area (Redevelopment Only)

☐ Minimizing disturbance to existing trees and shrubs

☐ LID Site Design Credit Requested:

- ☐ Credit 1
- ☐ Credit 2
- ☐ Credit 3

☐ Use of "country drainage" versus curb and gutter conveyance and pipe

☒ Bioretention Cells (includes Rain Gardens)

☐ Constructed Stormwater Wetlands (includes Gravel Wetlands designs)

☐ Treebox Filter

☐ Water Quality Swale

☒ Grass Channel

☐ Green Roof

☐ Other (describe): _____

Standard 1: No New Untreated Discharges

☒ No new untreated discharges

☒ Outlets have been designed so there is no erosion or scour to wetlands and waters of the Commonwealth

☐ Supporting calculations specified in Volume 3 of the Massachusetts Stormwater Handbook included.

Checklist for Stormwater Report

Checklist (continued)

Standard 2: Peak Rate Attenuation

☐ Standard 2 waiver requested because the project is located in land subject to coastal storm flowage and stormwater discharge is to a wetland subject to coastal flooding.

☐ Evaluation provided to determine whether off-site flooding increases during the 100-year 24-hour storm.

☒ Calculations provided to show that post-development peak discharge rates do not exceed pre-development rates for the 2-year and 10-year 24-hour storms. If evaluation shows that off-site flooding increases during the 100-year 24-hour storm, calculations are also provided to show that post-development peak discharge rates do not exceed pre-development rates for the 100-year 24-hour storm.

Standard 3: Recharge

☒ Soil Analysis provided.

☒ Required Recharge Volume calculation provided.

☐ Required Recharge volume reduced through use of the LID site Design Credits.

☒ Sizing the infiltration, BMPs is based on the following method: Check the method used.

☒ Static ☐ Simple Dynamic ☐ Dynamic Field[1]

☐ Runoff from all impervious areas at the site discharging to the infiltration BMP.

☐ Runoff from all impervious areas at the site is *not* discharging to the infiltration BMP and calculations are provided showing that the drainage area contributing runoff to the infiltration BMPs is sufficient to generate the required recharge volume.

☐ Recharge BMPs have been sized to infiltrate the Required Recharge Volume.

☒ Recharge BMPs have been sized to infiltrate the Required Recharge Volume *only* to the maximum extent practicable for the following reason:

☒ Site is comprised solely of C and D soils and/or bedrock at the land surface

☐ M.G.L. c. 21E sites pursuant to 310 CMR 40.0000

☐ Solid Waste Landfill pursuant to 310 CMR 19.000

☐ Project is otherwise subject to Stormwater Management Standards only to the maximum extent practicable.

☐ Calculations showing that the infiltration BMPs will drain in 72 hours are provided.

☐ Property includes a M.G.L. c. 21E site or a solid waste landfill and a mounding analysis is included.

[1] 80% TSS removal is required prior to discharge to infiltration BMP if Dynamic Field method is used.

Checklist for Stormwater Report

Checklist (continued)

Standard 3: Recharge (continued)

☐ The infiltration BMP is used to attenuate peak flows during storms greater than or equal to the 10-year 24-hour storm and separation to seasonal high groundwater is less than 4 feet and a mounding analysis is provided.

☐ Documentation is provided showing that infiltration BMPs do not adversely impact nearby wetland resource areas.

Standard 4: Water Quality

The Long-Term Pollution Prevention Plan typically includes the following:

- Good housekeeping practices;
- Provisions for storing materials and waste products inside or under cover;
- Vehicle washing controls;
- Requirements for routine inspections and maintenance of stormwater BMPs;
- Spill prevention and response plans;
- Provisions for maintenance of lawns, gardens, and other landscaped areas;
- Requirements for storage and use of fertilizers, herbicides, and pesticides;
- Pet waste management provisions;
- Provisions for operation and management of septic systems;
- Provisions for solid waste management;
- Snow disposal and plowing plans relative to Wetland Resource Areas;
- Winter Road Salt and/or Sand Use and Storage restrictions;
- Street sweeping schedules;
- Provisions for prevention of illicit discharges to the stormwater management system;
- Documentation that Stormwater BMPs are designed to provide for shutdown and containment in the event of a spill or discharges to or near critical areas or from LUHPPL;
- Training for staff or personnel involved with implementing Long-Term Pollution Prevention Plan;
- List of Emergency contacts for implementing Long-Term Pollution Prevention Plan.

☒ A Long-Term Pollution Prevention Plan is attached to Stormwater Report and is included as an attachment to the Wetlands Notice of Intent.

☒ Treatment BMPs subject to the 44% TSS removal pretreatment requirement and the one inch rule for calculating the water quality volume are included, and discharge:

- ☐ is within the Zone II or Interim Wellhead Protection Area
- ☒ is near or to other critical areas
- ☐ is within soils with a rapid infiltration rate (greater than 2.4 inches per hour)
- ☒ involves runoff from land uses with higher potential pollutant loads.

☐ The Required Water Quality Volume is reduced through use of the LID site Design Credits.

☒ Calculations documenting that the treatment train meets the 80% TSS removal requirement and, if applicable, the 44% TSS removal pretreatment requirement, are provided.

Checklist for Stormwater Report

Checklist (continued)

Standard 4: Water Quality (continued)

☐ The BMP is sized (and calculations provided) based on:

- ☒ The ½" or 1" Water Quality Volume or
- ☒ The equivalent flow rate associated with the Water Quality Volume and documentation is provided showing that the BMP treats the required water quality volume.

☒ The applicant proposes to use proprietary BMPs, and documentation supporting use of proprietary BMP and proposed TSS removal rate is provided. This documentation may be in the form of the propriety BMP checklist found in Volume 2, Chapter 4 of the Massachusetts Stormwater Handbook and submitting copies of the TARP Report, STEP Report, and/or other third party studies verifying performance of the proprietary BMPs.

☒ A TMDL exists that indicates a need to reduce pollutants other than TSS and documentation showing that the BMPs selected are consistent with the TMDL is provided.

Standard 5: Land Uses With Higher Potential Pollutant Loads (LUHPPLs)

☒ The NPDES Multi-Sector General Permit covers the land use and the Stormwater Pollution Prevention Plan (SWPPP) has been included with the Stormwater Report.

☐ The NPDES Multi-Sector General Permit covers the land use and the SWPPP will be submitted ***prior to*** the discharge of stormwater to the post-construction stormwater BMPs.

☐ The NPDES Multi-Sector General Permit does ***not*** cover the land use.

☒ LUHPPLs are located at the site and industry specific source control and pollution prevention measures have been proposed to reduce or eliminate the exposure of LUHPPLs to rain, snow, snow melt and runoff, and been included in the long term Pollution Prevention Plan.

☐ All exposure has been eliminated.

☒ All exposure has ***not*** been eliminated and all BMPs selected are on MassDEP LUHPPL list.

☒ The LUHPPL has the potential to generate runoff with moderate to higher concentrations of oil and grease (e.g. all parking lots with >1000 vehicle trips per day) and the treatment train includes an oil grit separator, a filtering bioretention area, a sand filter or equivalent.

Standard 6: Critical Areas

☒ The discharge is near or to a critical area and the treatment train includes only BMPs that MassDEP has approved for stormwater discharges to or near that particular class of critical area.

☒ Critical areas and BMPs are identified in the Stormwater Report.

Checklist for Stormwater Report

Checklist (continued)

Standard 7: Redevelopments and Other Projects Subject to the Standards only to the maximum extent practicable

☒ The project is subject to the Stormwater Management Standards only to the maximum Extent Practicable as a:

☐ Limited Project

☐ Small Residential Projects: 5-9 single family houses or 5-9 units in a multi-family development provided there is no discharge that may potentially affect a critical area.

☐ Small Residential Projects: 2-4 single family houses or 2-4 units in a multi-family development with a discharge to a critical area

☐ Marina and/or boatyard provided the hull painting, service and maintenance areas are protected from exposure to rain, snow, snow melt and runoff

☐ Bike Path and/or Foot Path

☒ Redevelopment Project

☐ Redevelopment portion of mix of new and redevelopment.

☐ Certain standards are not fully met (Standard No. 1, 8, 9, and 10 must always be fully met) and an explanation of why these standards are not met is contained in the Stormwater Report.

☒ The project involves redevelopment and a description of all measures that have been taken to improve existing conditions is provided in the Stormwater Report. The redevelopment checklist found in Volume 2 Chapter 3 of the Massachusetts Stormwater Handbook may be used to document that the proposed stormwater management system (a) complies with Standards 2, 3 and the pretreatment and structural BMP requirements of Standards 4-6 to the maximum extent practicable and (b) improves existing conditions.

Standard 8: Construction Period Pollution Prevention and Erosion and Sedimentation Control

A Construction Period Pollution Prevention and Erosion and Sedimentation Control Plan must include the following information:

- Narrative;
- Construction Period Operation and Maintenance Plan;
- Names of Persons or Entity Responsible for Plan Compliance;
- Construction Period Pollution Prevention Measures;
- Erosion and Sedimentation Control Plan Drawings;
- Detail drawings and specifications for erosion control BMPs, including sizing calculations;
- Vegetation Planning;
- Site Development Plan;
- Construction Sequencing Plan;
- Sequencing of Erosion and Sedimentation Controls;
- Operation and Maintenance of Erosion and Sedimentation Controls;
- Inspection Schedule;
- Maintenance Schedule;
- Inspection and Maintenance Log Form.

☒ A Construction Period Pollution Prevention and Erosion and Sedimentation Control Plan containing the information set forth above has been included in the Stormwater Report.

Checklist for Stormwater Report

Checklist (continued)

Standard 8: Construction Period Pollution Prevention and Erosion and Sedimentation Control (continued)

☐ The project is highly complex and information is included in the Stormwater Report that explains why it is not possible to submit the Construction Period Pollution Prevention and Erosion and Sedimentation Control Plan with the application. A Construction Period Pollution Prevention and Erosion and Sedimentation Control has ***not*** been included in the Stormwater Report but will be submitted ***before*** land disturbance begins.

☐ The project is ***not*** covered by a NPDES Construction General Permit.

☒ The project is covered by a NPDES Construction General Permit and a copy of the SWPPP is in the Stormwater Report.

☐ The project is covered by a NPDES Construction General Permit but no SWPPP been submitted. The SWPPP will be submitted BEFORE land disturbance begins.

Standard 9: Operation and Maintenance Plan

☒ The Post Construction Operation and Maintenance Plan is included in the Stormwater Report and includes the following information:

- ☒ Name of the stormwater management system owners;
- ☒ Party responsible for operation and maintenance;
- ☒ Schedule for implementation of routine and non-routine maintenance tasks;
- ☒ Plan showing the location of all stormwater BMPs maintenance access areas;
- ☐ Description and delineation of public safety features;
- ☐ Estimated operation and maintenance budget; and
- ☒ Operation and Maintenance Log Form.

☐ The responsible party is ***not*** the owner of the parcel where the BMP is located and the Stormwater Report includes the following submissions:

- ☐ A copy of the legal instrument (deed, homeowner's association, utility trust or other legal entity) that establishes the terms of and legal responsibility for the operation and maintenance of the project site stormwater BMPs;
- ☐ A plan and easement deed that allows site access for the legal entity to operate and maintain BMP functions.

Standard 10: Prohibition of Illicit Discharges

☐ The Long-Term Pollution Prevention Plan includes measures to prevent illicit discharges;

☒ An Illicit Discharge Compliance Statement is attached;

☐ NO Illicit Discharge Compliance Statement is attached but will be submitted ***prior to*** the discharge of any stormwater to post-construction BMPs.

Nitsch Engineering

Boston, MA 02111-2403
T: 617-338-0063
F: 617-338-6472

Form S3-B: Standard #3 – Recharge
Required Recharge Volume/City of Boston Recharge

Project Name: **Suffolk Downs**	Nitsch Project #: **9180**
Location: **Boston, MA**	Checked by: **ST**
Prepared by: **NGG/TJM**	Sheet No. **1 of 1**
Date: **6/27/2013**	

The project is a redevelopment and therefore requires Standard 3: Required Recharge Volume to be met to the maximum extent practical. The Project includes a reduction in impervious area and therefore will comply with this standard by exceeding the approximate annual recharge volume as compared to the pre-development site.

This calculation demonstrates that the proposed bioretention basins hold a static volume that exceeds a volume equal to 1.0-inch times the total proposed impervious area to meet City of Boston stormwater regulations. The proposed impervious area excludes the roofs from the CAFO area. The CAFO roof stormwater drainage system will not be modified as part of this project.

$$Total\ Proposed\ Impervious\ Area = 65.01\ ac$$
$$CAFO\ Roof = 8.87\ ac$$
$$65.01\ ac - 8.87\ ac = 56.14\ ac$$

City of Boston Recharge Volume:

$$1.0\ in \times (56.14\ ac \times 43{,}560\ sf/ac) = 203{,}800\ cf$$

Proposed Recharge Volumes for Stormwater BMPs

Infiltration BMP	Recharge Volume (cf)
Bioretention Basin 1	52,219
Bioretention Basin 2	50,614
Bioretention Basin 3	15,247
Bioretention Basin 4	29,414
Bioretention Basin 5	49,160
Bioretention Basin 6	26,004
Total Proposed	**222,658**

$$222{,}658\ cf > 203{,}800\ cf \quad OK$$

Nitsch Engineering

T: 617-338-0063
F: 617-338-6472

Form S3-B: Standard #4 – WQV
Water Quality Volume

Project Name: **Suffolk Downs**	Nitsch Project #: **9180**
Location: **Boston, MA**	Checked by: **ST**
Prepared by: **NGG/TJM**	Sheet No. **1 of 1**
Date: **6/27/2013**	

Step No.			
1	Impervious area (excluding CAFO roofs):	2,445,588	sf
	Proposed Roof Area:	405,126	sf
	Treated Impervious Area:	2,040,463	sf
	Water Quality Depth:	1.0	in
2	Water Quality Volume =	170,039	cf

Water Quality Depth of 1.0" selected based on discharge to a Critical Area and LUHPPL.

Bioretention Basins and Stormceptors are the primary treatment BMPs. The Stormceptors will be sized to treat the flow rate from 1.0" of runoff within the units' catchment area. The Bioretention Basins will be sized to capture a volume of 1.0" over the proposed impervious area per City of Boston Requirements which will exceed the required Water Quality Volume.

Proposed Water Quality Volume

Main Treatment BMP	Non-roof Impervious area in watershed (sf)	Water Quality Depth (in)	Required Design Water Quality Volume (cf)	Total Static Treated Volume (cf)	Check
Bioretention Basins	915,386	1.0	76,282	222,658	OK
Stormceptors	1,530,203	1.0	127,517	SEE NOTE	OK
		TOTAL	**203,799**	**222,658**	OK

NOTE: Stormceptors will be sized based on flow rate from 1" of runoff, and will treat runoff from the site that does not enter a Bioretention Basin.

MASTEP Technology Review

Technology Name: Stormceptor

Studies Reviewed: Final NJCAT Technology Verification Stormceptor STC900 September 2004; Coventry University Study, 1996; Technology Assessment, University of Massachusetts, 1997; SeaTac Stormceptor Performance report 2001; SWAMP report Ontario 2004; Phoenix Group Edmonton report 1995; Stormceptor 1200 Field Evaluation report 2004; Applied Hydrology Associates Denver report 2003; Rinker Materials Como Park St. Paul MN report 2002; VA DOT / UVA "Testing of Ultra-Urban Stormwater Best Management Practices" report 2001.

Date: November 23, 2007

Reviewer: Jerry Schoen

Rating: 2

Brief rationale for rating: This rating is primarily based on the 2005 NJCAT Technology Verification study. In general, this was a well-conducted test, which in large part followed NJDEP test guidelines for laboratory studies, which MASTEP considers as the laboratory equivalent of TARP field protocols. Issues of concern: the study measured suspended sediment concentration (SSC) rather than total suspended solids (TSS). Although SSC is considered by many scientists to be the preferred method, it is at odds with Massachusetts stormwater regulations, which are based on TSS treatment. Comparing SSC and TSS results is considered an inexact science. The test was conducted with higher influent sediment concentrations than is preferred, but results were fairly consistent across all ranges studied. The particle size distribution also appears to be slightly higher than the target test range. There are additional field studies that in general support the results obtained in this laboratory studies. These studies do not satisfy TARP protocols, but they do not contradict results obtained in the NJCAT study.

TARP Requirements Not Met*:

- Measurements in TSS.
- Influent sediment concentration is 100 – 300 mg/l: actual was 153-460.
- No documentation of a Quality Assurance Project Plan
- Third party studies are preferred. This was conducted by Stormceptor personnel, with sample analyses conducted by an external laboratory.

* Criteria also based on NJDEP laboratory testing guidelines.

*This Stormceptor sizing report is preliminary and represents a typical Stormceptor sizing calculation. Stormceptor units are used for water quality treatment in all locations where Bioretention Basins are not feasible.

Stormceptor Sizing Detailed Report

PCSWMM for Stormceptor

Project Information

Date	7/1/2013
Project Name	Resort at Suffolk Downs
Project Number	9180
Location	Boston, MA

Stormwater Quality Objective

This report outlines how Stormceptor System can achieve a defined water quality objective through the removal of total suspended solids (TSS). Attached to this report is the Stormceptor Sizing Summary.

Stormceptor System Recommendation

The Stormceptor System model STC 7200 achieves the water quality objective removing 74% TSS for a Fine (organics, silts and sand) particle size distribution.

The Stormceptor System

The Stormceptor oil and sediment separator is sized to treat stormwater runoff by removing pollutants through gravity separation and flotation. Stormceptor's patented design generates positive TSS removal for all rainfall events, including large storms. Significant levels of pollutants such as heavy metals, free oils and nutrients are prevented from entering natural water resources and the re-suspension of previously captured sediment (scour) does not occur.

Stormceptor provides a high level of TSS removal for small frequent storm events that represent the majority of annual rainfall volume and pollutant load. Positive treatment continues for large infrequent events, however, such events have little impact on the average annual TSS removal as they represent a small percentage of the total runoff volume and pollutant load.

Stormceptor is the only oil and sediment separator on the market sized to remove TSS for a wide range of particle sizes, including fine sediments (clays and silts), that are often overlooked in the design of other stormwater treatment devices.

Small storms dominate hydrologic activity, US EPA reports

"*Early efforts in stormwater management focused on flood events ranging from the 2-yr to the 100-yr storm. Increasingly stormwater professionals have come to realize that small storms (i.e. < 1 in. rainfall) dominate watershed hydrologic parameters typically associated with water quality management issues and BMP design. These small storms are responsible for most annual urban runoff and groundwater recharge. Likewise, with the exception of eroded sediment, they are responsible for most pollutant washoff from urban surfaces. Therefore, the small storms are of most concern for the stormwater management objectives of ground water recharge, water quality resource protection and thermal impacts control.*"

"*Most rainfall events are much smaller than design storms used for urban drainage models. In any given area, most frequently recurrent rainfall events are small (less than 1 in. of daily rainfall).*"

"Continuous simulation offers possibilities for designing and managing BMPs on an individual site-by-site basis that are not provided by other widely used simpler analysis methods. Therefore its application and use should be encouraged."

– US EPA Stormwater Best Management Practice Design Guide, Volume 1 – General Considerations, 2004

Design Methodology

Each Stormceptor system is sized using PCSWMM for Stormceptor, a continuous simulation model based on US EPA SWMM. The program calculates hydrology from up-to-date local historical rainfall data and specified site parameters. With US EPA SWMM's precision, every Stormceptor unit is designed to achieve a defined water quality objective.

The TSS removal data presented follows US EPA guidelines to reduce the average annual TSS load. Stormceptor's unit process for TSS removal is settling. The settling model calculates TSS removal by analyzing (summary of analysis presented in Appendix 2):

- Site parameters
- Continuous historical rainfall, including duration, distribution, peaks (Figure 1)
- Interevent periods
- Particle size distribution
- Particle settling velocities (Stokes Law, corrected for drag)
- TSS load (Figure 2)
- Detention time of the system

The Stormceptor System maintains continuous positive TSS removal for all influent flow rates. Figure 3 illustrates the continuous treatment by Stormceptor throughout the full range of storm events analyzed. It is clear that large events do not significantly impact the average annual TSS removal. There is no decline in cumulative TSS removal, indicating scour does not occur as the flow rate increases.

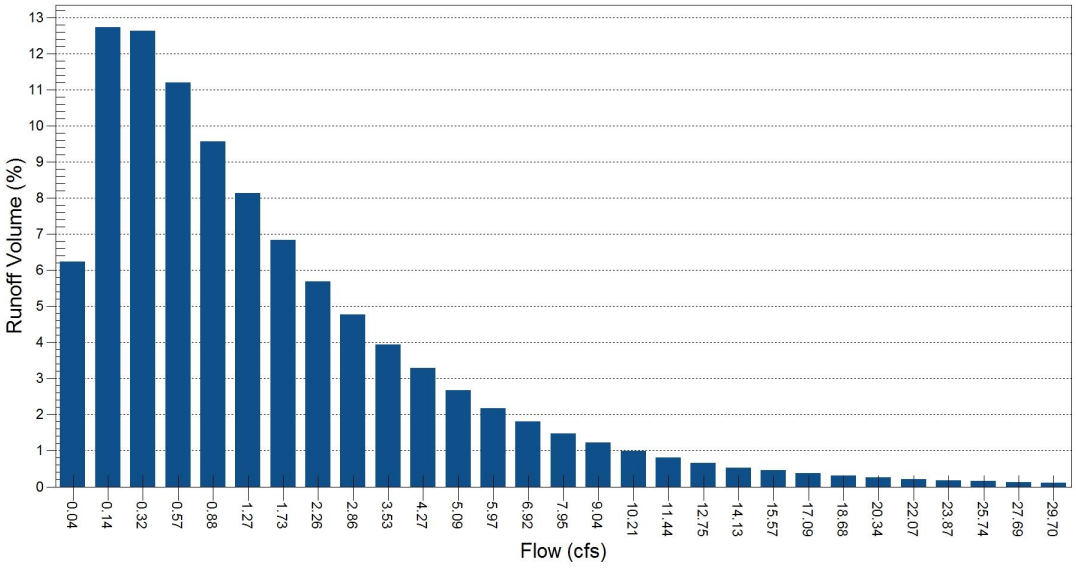

Figure 1. Runoff Volume by Flow Rate for BOSTON WSFO AP – MA 770, 1948 to 2005 for 10 ac, 98% impervious. Small frequent storm events represent the majority of annual rainfall volume. Large infrequent events have little impact on the average annual TSS removal, as they represent a small percentage of the total annual volume of runoff.

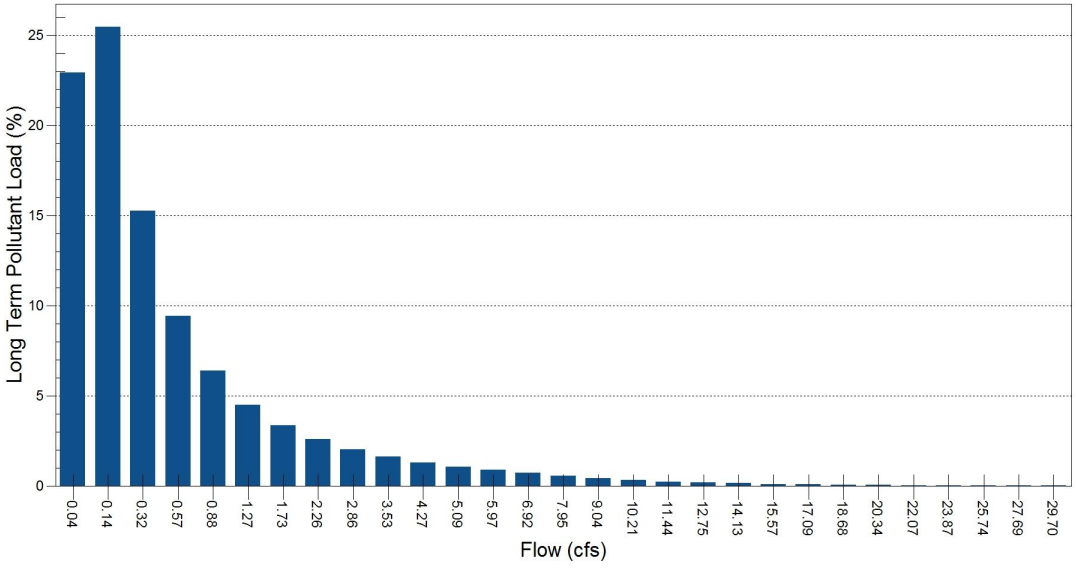

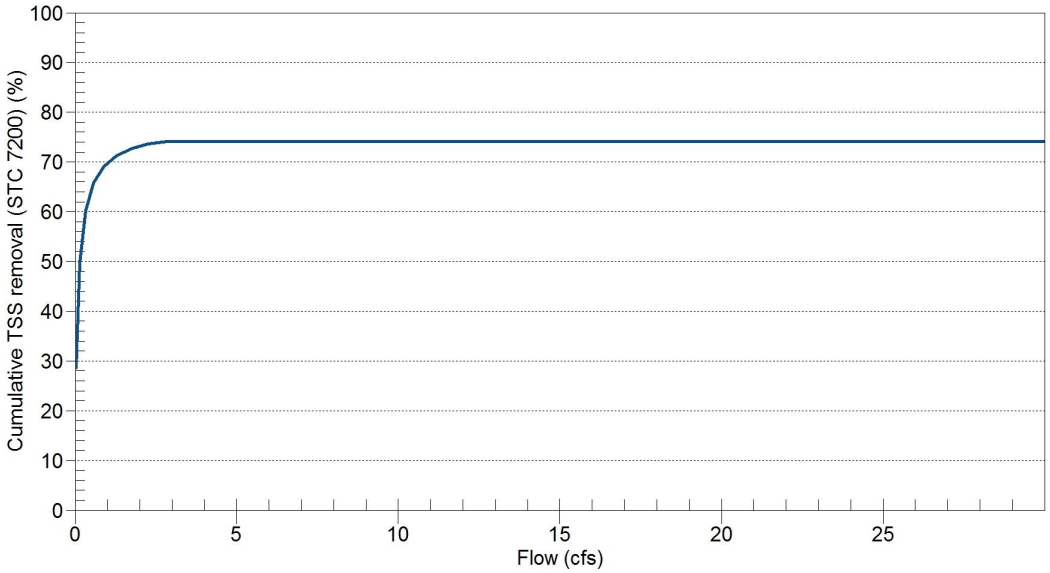

Figure 2. Long Term Pollutant Load by Flow Rate for BOSTON WSFO AP – 770, 1948 to 2005 for 10 ac, 98% impervious. The majority of the annual pollutant load is transported by small frequent storm

events. Conversely, large infrequent events carry an insignificant percentage of the total annual pollutant load.

Stormceptor Model	STC 7200	Drainage Area (ac)	10
TSS Removal (%)	74	Impervious (%)	98

Figure 3. Cumulative TSS Removal by Flow Rate for BOSTON WSFO AP – 770, 1948 to 2005. Stormceptor continuously removes TSS throughout the full range of storm events analyzed. Note that large events do not significantly impact the average annual TSS removal. Therefore no decline in cumulative TSS removal indicates scour does not occur as the flow rate increases.

Appendix 1

Particle Size Distribution

Removing silt particles from runoff ensures that the majority of the pollutants, such as hydrocarbons and heavy metals that adhere to fine particles, are not discharged into our natural water courses. The table below lists the particle size distribution used to define the annual TSS removal.

Fine (organics, silts and sand)

Particle Size µm	Distribution %	Specific Gravity	Settling Velocity ft/s		Particle Size µm	Distribution %	Specific Gravity	Settling Velocity ft/s
20	20	1.3	0.0013					
60	20	1.8	0.0051					
150	20	2.2	0.0354					
400	20	2.65	0.2123					
2000	20	2.65	0.9417					

Stormceptor Design Notes

- Stormceptor performance estimates are based on simulations using PCSWMM for Stormceptor.
- Design estimates listed are only representative of specific project requirements based on total suspended solids (TSS) removal.
- Only the STC 450i is adaptable to function with a catch basin inlet and/or inline pipes.
- Only the Stormceptor models STC 450i to STC 7200 may accommodate multiple inlet pipes.
- Inlet and outlet invert elevation differences are as follows:

Inlet and Outlet Pipe Invert Elevations Differences

Inlet Pipe Configuration	STC 450i	STC 900 to STC 7200	STC 11000 to STC 16000
Single inlet pipe	3 in.	1 in.	3 in.
Multiple inlet pipes	3 in.	3 in.	Only one inlet pipe.

- Design estimates are based on stable site conditions only, after construction is completed.
- Design estimates assume that the storm drain is not submerged during zero flows. For submerged applications, please contact your local Stormceptor representative.
- Design estimates may be modified for specific spills controls. Please contact your local Stormceptor representative for further assistance.
- For pricing inquiries or assistance, please contact Rinker Materials 1 (800) 909-7763 www.rinkerstormceptor.com

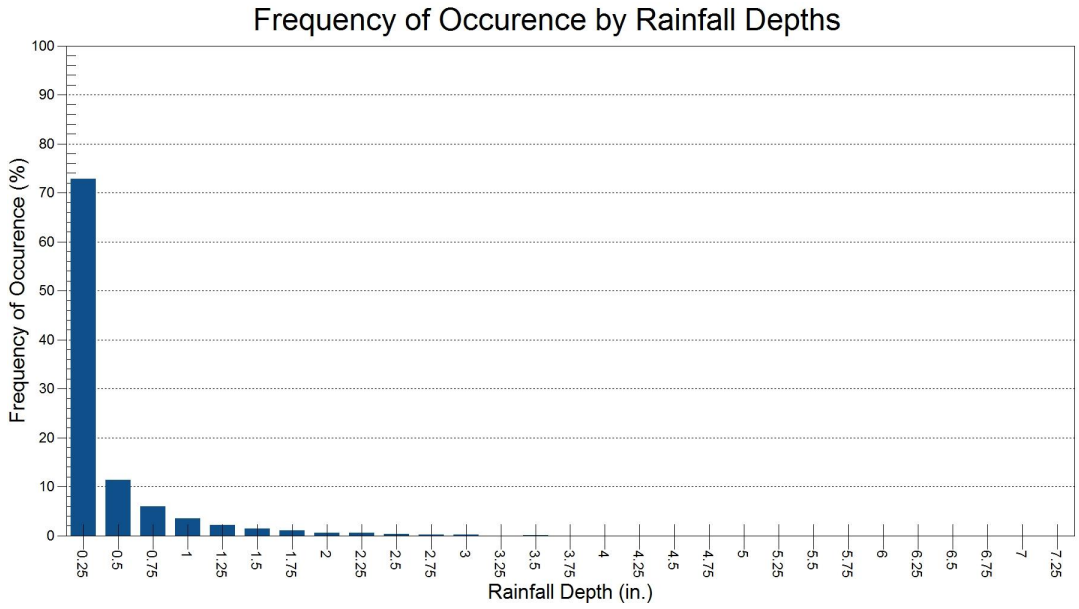
HYDROLOGY ANALYSIS

PCSWMM for Stormceptor calculates annual hydrology with the US EPA SWMM and local continuous historical rainfall data. Performance calculations of the Stormceptor System are based on the average annual removal of TSS for the selected site parameters. The Stormceptor System is engineered to capture fine particles (silts and sands) by focusing on average annual runoff volume ensuring positive removal efficiency is maintained during all rainfall events, while preventing the opportunity for negative removal efficiency (scour).



Smaller recurring storms account for the majority of rainfall events and average annual runoff volume, as observed in the historical rainfall data analyses presented in this section.

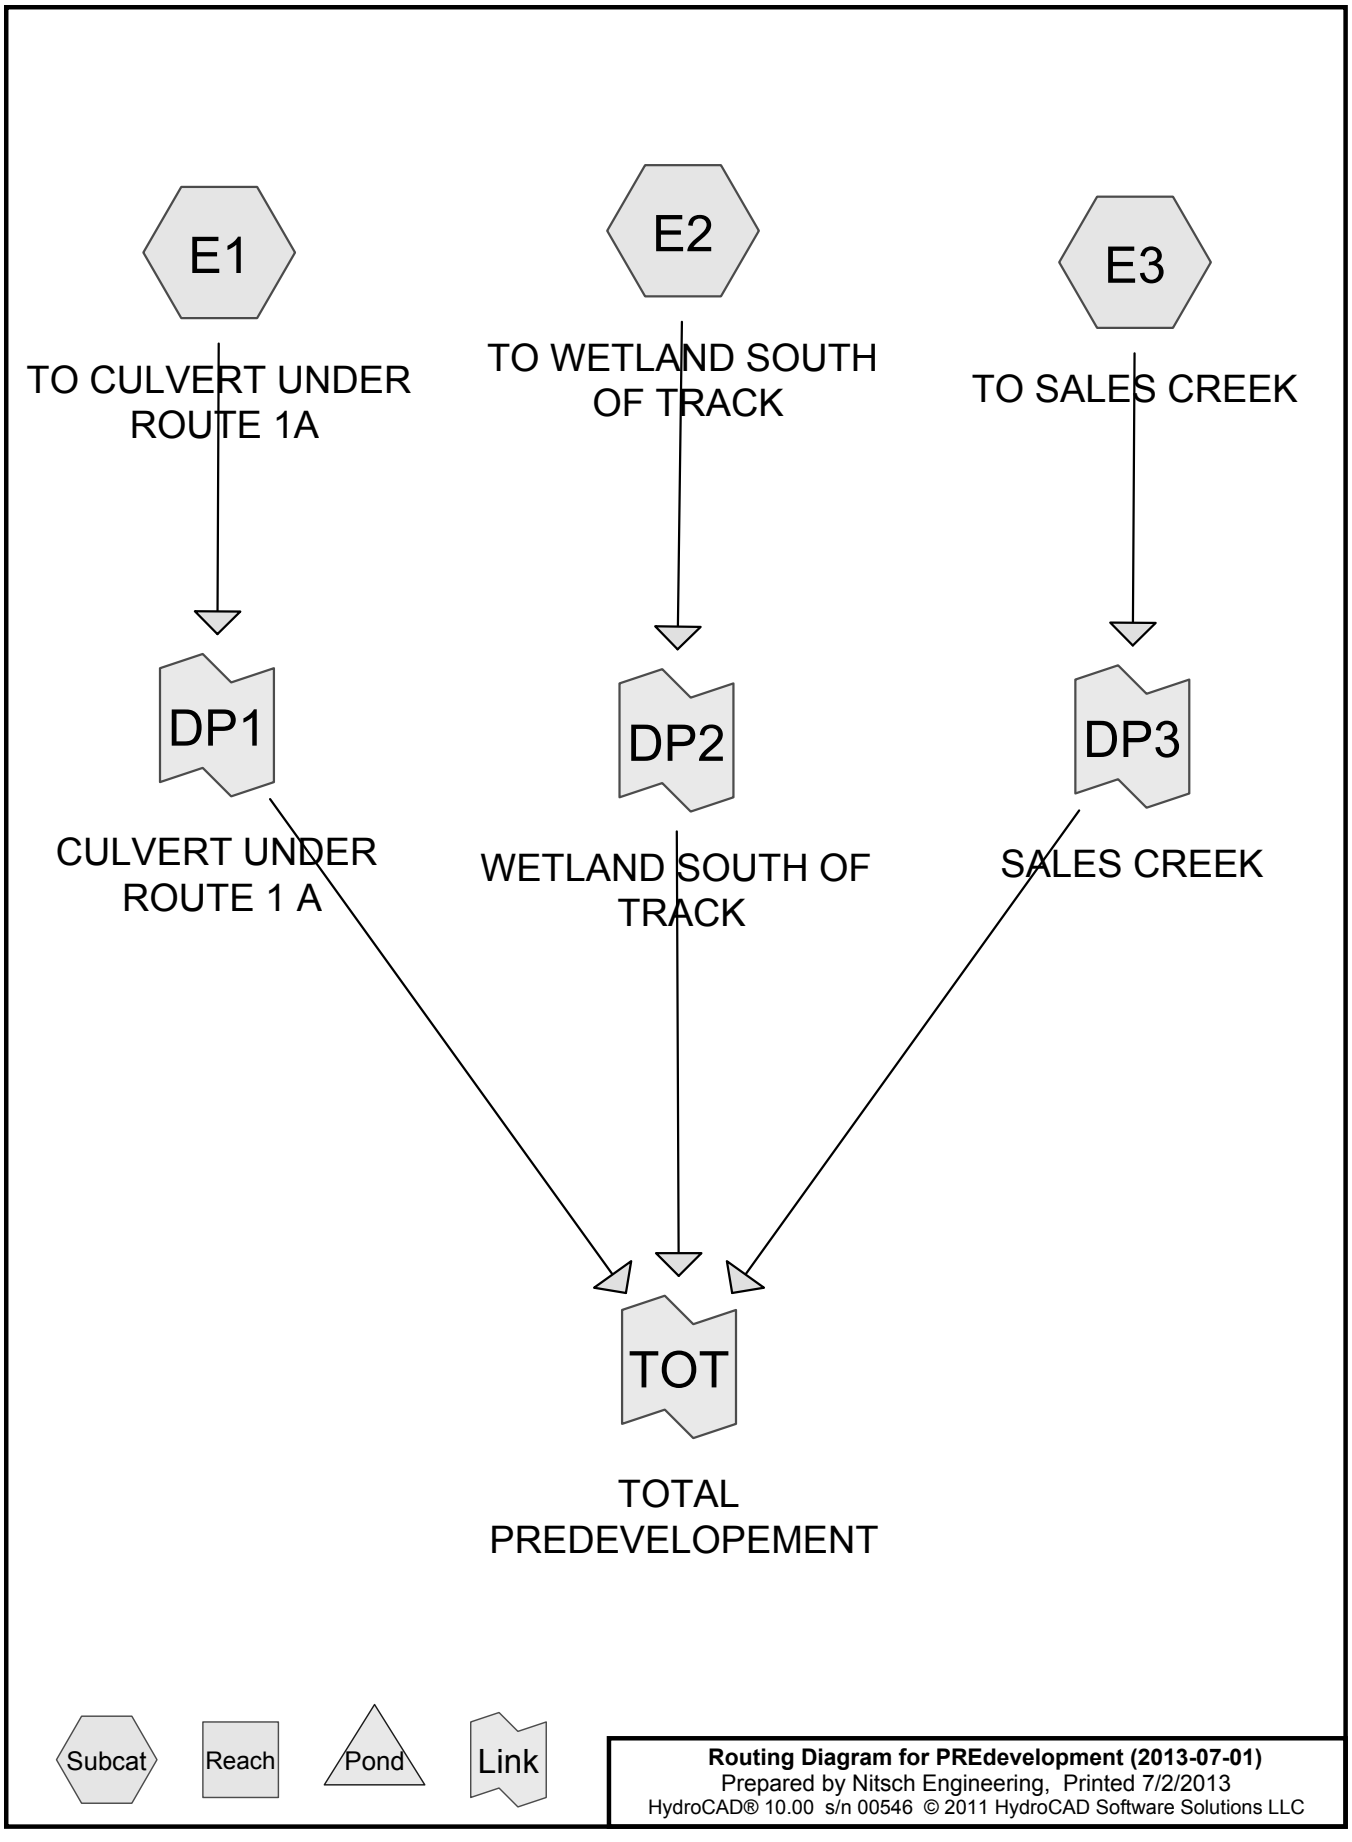
THE RESORT AT SUFFOLK DOWNS
525 McClellan Highway
East Boston, Massachusetts

STANDARD 10: Illicit Discharge Compliance Statement

Standard 10 states: All illicit discharges to the stormwater management system are prohibited.

This is to verify:

1. Based on the information available there are no known or suspected illicit discharges to the stormwater management system at the RESORT AT SUFFOLK DOWNS site as defined in the DEP Stormwater Handbook.



2. The design of the stormwater system includes no proposed illicit discharges and no proposed illicit discharges are proposed.

STORMWATER MANAGEMENT SYSTEM INSPECTION & MAINTENANCE FORM 10

1.0 INTRODUCTION

The purpose of this document is to specify the pollution prevention measures and stormwater management system operation and maintenance for the Resort at Suffolk Downs (the Resort). The Owner shall implement the management practices outlined in this Manual and proactively conduct operations at the Resort in an environmentally responsible manner. Compliance with this Manual does not in any way dismiss the Owner, property manager, or occupants from compliance with other applicable Federal, State or local laws.

Owner: The Resort at Suffolk Downs
525 McClellan Highway
East Boston, MA 02128

This Document has been prepared in compliance with Standards 4 and 9 of the 2008 Massachusetts Department of Environmental Protection (MassDEP) Stormwater Management Standards, which state:

Standard 4:
The Long Term Pollution Prevention Plan shall include the proper procedures for the following:

- Good housekeeping
- Storing materials and waste products inside or under cover
- Vehicle washing
- Routine inspections of stormwater best management practices
- Spill prevention and response
- Maintenance of lawns, gardens, and other landscaped areas
- Storage and used of fertilizers, herbicides, and pesticides
- Pet waste management
- Operation and management of septic systems
- Proper management of deicing chemicals and snow

Standard 9:
The Long-Term Operation and Maintenance Plan shall at a minimum include:

- Stormwater management system(s) owner(s)
- The party or parties responsible for operation and maintenance, including how future property owners shall be notified of the presence of the stormwater management system and the requirement for operation and maintenance
- The routine and non-routine maintenance tasks to be undertaken after construction is complete and a schedule for implementing those tasks
- A plan that is drawn to scale and shows the location of all stormwater BMPs in each treatment train along with the discharge point
- A description of public safety features
- An estimated operations and maintenance budget

2.0 LONG-TERM POLLUTION PREVENTION PLAN

2.1 Source Control Practices for Pollution Prevention

The Owner and occupants should follow good housekeeping procedures at the Resort to reduce the possibility of accidental releases and to reduce safety hazards, which shall include but not be limited to the following:

- Proper handling, storage, disposal, and recycling of hazardous materials and waste products.
- Proper handling, storage and inventory of household chemicals.
- Prompt cleanup and removal of spills and releases.

2.2 Storage of Hazardous Materials

To prevent leaks and spills, keep hazardous materials and waste products under cover or inside. Use drip pans or spill containment systems to prevent chemicals from entering the drainage system. Inspect storage areas for materials and waste products at least once per year to determine amount and type of the material on site, and if the material requires disposal.

Securely store liquid petroleum products and other liquid chemicals in federally- and state-approved containers. Restrict access to maintenance personnel and administrators.

Store fluid fertilizers in labeled containers and/or structures that prevent the discharge of fluid fertilizers and are resistant to corrosion, puncture, or cracking. Store and handle dry fertilizers in a manner to prevent pollution by minimizing losses to the air, surface water, ground water, or subsoil.

2.3 Storage of Waste Products

Collect and store all waste materials in securely lidded dumpster(s) or other secure containers as applicable to the material. Keep dumpster lids closed and the areas around them clean. Do not fill the dumpsters with liquid waste or hose them out. Sweep areas around the dumpster regularly and put the debris in the garbage, instead of sweeping or hosing it into the parking lot. Legally dispose of collected waste on a regular basis.

Segregate liquid wastes, including motor oil, antifreeze, solvents, and lubricants, from solid waste and recycle through hazardous waste disposal companies, whenever possible. Separate oil filters, batteries, tires, and metal filings from grinding and polishing metal parts from common trash items and recycle. These items are not trash and are illegal to dump. Contact a hazardous waste hauler for proper disposal of unwanted pesticides to a hazardous waste collection center.

2.4 Spill Prevention and Response

The Owner shall implement spill response procedures for releases of significant materials such as fuels, oils, or chemical materials onto the ground or other area that could reasonably be expected to discharge to surface or groundwater.

- For minor spills, keep fifty (50) gallon spill control kits and Speedy Dry at all maintenance facilities and work areas.

- Immediately contact applicable Federal, State, and local agencies for reportable quantities as required by law.

- Immediately perform applicable containment and cleanup procedures following a spill release.

- Promptly remove and dispose of all material collected during the response in accordance with Federal, State and local requirements. A licensed emergency response contractor may be required to assist in cleanup of releases depending on the amount of the release, and the ability of the Contractor to perform the required response.

- Reportable quantities of chemicals, fuels, or oils are established under the Clean Water Act and enforced through Massachusetts Department of Environmental Protection (DEP).

2.5 Minimize Soil Erosion

Soil erosion facilitates mechanical transport of nutrients, pathogens, and organic matter to surface water bodies. Repair all areas where erosion is occurring throughout the Resort. Stabilize bare soil with riprap, seed, mulch, or vegetation.

2.6 Vehicle Washing:

Vehicle washing shall not occur on the property.

2.7 Maintenance of Lawns, Gardens, and other Landscaped Areas

Pesticides and fertilizers shall not be used in landscaped areas located within environmentally sensitive areas, including the 25-foot Riverfront Area to Sales Creek and the 100-foot Buffer Zone to the Bordering Vegetated Wetlands. Grass clippings, pruned branches and any other landscaped waste should be disposed of or composted in an appropriate location outside of the environmentally-sensitive areas. No irrigation shall be used in the landscaped areas for this project.

2.8 Management of Deicing Chemicals and Snow

The qualified contractor selected for snow plowing and deicing shall be made fully aware of the requirements of this section.

No road salt (sodium chloride) shall be stored on-site. The use of magnesium chloride de-icing product with a 0.5 to 1.0 percent sodium chloride mix for snow and ice treatment is permitted. The product shall be stored in a locked room inside the building and shall be used at exterior stairs and walkways. The snow plow contractor shall adhere to these magnesium chloride use and storage requirements.

During typical snow plowing operations, snow shall be pushed to the designated snow removal areas. Snow shall not be stockpiled in environmentally sensitive areas, including the 25-foot Riverfront Area to Sales Creek and the 100-foot Buffer Zones to the Bordering Vegetated Wetlands, the bioretention basins, or biofiltration swales. In severe conditions where snow cannot be stockpiled on site, the snow shall be removed from the site and properly disposed of in accordance with DEP Guideline BRP601-01.

Use of sand is permitted only for impervious roadways and parking areas. If sand is applied, the snow plowed from impervious areas shall not be stored on porous asphalt.

Porous pavers are proposed in pedestrian areas. The porous pavers shall be maintained during snow events as provided below:

- Apply anti-icing treatments prior to storms only when absolutely necessary. It is not anticipated that deicing chemicals will be required for typical winter events.

- Plow as needed after storm events. Avoid scarifying the paver surface. Special plow blades should be used whenever possible. Attach rollers to the bottoms of snowplows to prevent them from catching on the edges of pavers.

- Apply the minimum amount of deicing agents during and after storms required to control compact snow and ice that are not removed by plowing.

- Do not apply sand in porous paver areas. "No Sanding" signs shall be posted before the first snowfall and maintenance and snow removal contractors shall be made aware of this requirement.

Before winter begins, the property owner and the contractor shall review snow plowing, deicing, and stockpiling procedures. Areas designated for stockpiling should be cleaned of any debris. Street and parking lot sweeping should be followed in accordance with the Operation and Maintenance Plan.

2.9 Coordination with other Permits and Requirements

Certain conditions of other approvals affecting the long term management of the property shall be considered part of this Long Term Pollution Prevention Plan. The Owner shall become familiar with those documents and comply with the guidelines set forth in those documents.

3.0 STORMWATER MANAGEMENT SYSTEM OPERATION AND MAINTENANCE PLAN

3.1 Introduction

This Stormwater Management System Operation and Maintenance Plan (O&M Plan) for the Resort at Suffolk Downs is required under Standard 9 of the 2008 MassDEP Stormwater Handbook to provide best management practices for implementing maintenance activities for the stormwater management system in a manner that minimizes impacts to wetland resource areas.

The Owner shall implement this O&M Plan and proactively conduct operations at the site in an environmentally responsible manner. Compliance with this O&M Plan does not in any way dismiss the Owner from compliance with other applicable Federal, State or local laws.

Routine maintenance during construction and post-development phases of the project, as defined in the Operation and Maintenance Plan, shall be permitted without amendment to the Order of Conditions. A continuing condition in the Certificate of Compliance shall ensure that maintenance can be performed without triggering further filings under the Wetlands Protection Act.

All stormwater best management practices (BMPs) shall be operated and maintained in accordance with the design plans and the Operation and Maintenance Plan approved by the issuing authority. The Owner shall:

a. Maintain an operation and maintenance log for the last three years, including inspections, repairs, replacement and disposal (for disposal the log shall indicate the type of material and the disposal location). This is a rolling log in which the responsible party records all operation and maintenance activities for the past three years.

b. Make this log available to MassDEP and the Conservation Commission upon request; and

c. Allow members and agents of the MassDEP and the Conservation Commission to enter and inspect the premises to evaluate and ensure that the Owner complies with the Operation and Maintenance requirements for each BMP.

3.2 Stormwater Operation and Maintenance Requirements

Inspect and maintain the stormwater management system as directed below. Repairs to any component of the system shall be made as soon as possible to prevent any potential pollutants (including silt) from entering the resource areas.

<u>Deep Sump and Hooded Catch Basins</u>

Inspect catch basins four times per year, including after the foliage season. Other inspection and maintenance requirements include:

- Remove organic material, sediment and hydrocarbons four times per year or whenever the depth of deposits is greater than or equal to one half the depth from the bottom of the invert of the lowest pipe in the basin.
- Always clean out catch basins after street sweeping. If any evidence of hydrocarbons is found during inspection, the material immediately remove using absorbent pads or other suitable measures and dispose of legally. Remove other accumulated debris as necessary.

- Transport and disposal of accumulated sediment off-site shall be in accordance with applicable local, state and federal guidelines and regulations.

Area Drains

Inspect area drains at least once per month and remove debris from the grate. Clean out accumulated sediments at least once per year and more frequently as necessary.

Stormceptor® Water Quality Structures

Maintain Stormceptor® water quality structures according the recommendations set forth by the manufacturer, which are provided below:

- Units should be inspected post construction, prior to being put into service.
- Inspect every six months for the first year to determine the oil and sediment accumulation rate. All inspections shall include checking the oil level and sediment depth in the unit. Removal of sediments/oils shall occur per manufacturer recommendations.
- In subsequent years, inspections can be based on first-year observations and no less than once per year.
- Cleaning is required once the sediment depth reaches 15% of storage capacity, and no less than once per year.
- Inspect the unit immediately after an oil, fuel or chemical spill.
- A licensed waste management company should remove oil and sediment and dispose responsibly.
- OSHA confined space entry protocols shall be followed if entry into the unit is required.

Sediment Forebays

At a minimum, inspect the sediment forebays monthly and remove accumulated sediment at least four times per year. Stabilize the flood and sidewalls of the forebay before making it operational. When mowing grasses, keep the height no greater than 6 inches. Check for signs of erosion and repair as needed. After removing sediment, replace any vegetation damaged during the clean-out by either reseeding or re-sodding. When reseeding, incorporate practices such as hydroseeding with a tackifier, blanket, or similar practice to ensure that no scour occurs in the forebay.

Bioretention Basins

Perform annual maintenance of all components of the bioretention basins, including plants, soil, and mulch. Table 1, below, outlines recommended maintenance activities.

Table 1. Bioretention area maintenance recommendations

Location	Description	Frequency	Time of Year
Surface	Inspect and remove trash	Monthly	Year round
Soil	Inspect and repair erosion	Monthly	Year round
Organic Layer	Remulch void areas	Annually	Spring
	Remove previous mulch layer before applying new layer (optional)	Annually	Spring
Plants	Water vegetation at end of day for 14 consecutive days after planting	Immediately after planting	As needed
	Remove and replace all dead and diseased vegetation that cannot be treated	Annually	Spring
	Treat all diseased trees and shrubs	As needed	Variable

During and after storm events, record the length of time standing water remains in the bioretention basins. If the time is greater than 72 hours, thoroughly inspect the basins for signs of clogging and develop a corrective action plan. The corrective action plan, prepared by a qualified professional, will outline procedures to restore infiltrative function. The owner of the site shall take immediate action to implement these corrective measures.

Biofiltration Swales

Inspect the biofiltration swales in the first few months after construction to ensure that there is no rilling or gullying, and that vegetation in the swales is adequate. Thereafter, inspect the swales twice per year for slope integrity, soil moisture, vegetative health, soil stability, soil compaction, soil erosion, ponding, and sediment accumulation.

Regular maintenance tasks include mowing, fertilizing, liming, watering, pruning, weeding, and pest control.

- Mow channels at least once per year. Do not cut the grass shorter than three to four inches. Keep grass height under 6 inches to maintain the design depth necessary to serve as a conveyance. Do not mow excessively, because it may increase the design flow velocity.
- Remove sediment and debris manually at least once per year.
- Re-seed periodically to maintain the dense growth of grass vegetation.

Porous Pavers

Porous pavers are proposed in pedestrian areas throughout the site. Inspection and maintenance of the porous pavers are critical to prevent clogging.

Frequent vacuum sweeping along with jet washing of porous asphalt is required. No winter sanding shall be conducted on the porous surface. For proper maintenance:

- Keep adjacent landscaped areas well maintained to prevent soil from being transported onto the porous pavers.
- Regularly monitor the porous pavers to check for deterioration and make sure that they drain

properly after storm events.

- Clean the surface of the porous pavers using vacuum sweeping as required to keep the pavement functioning as designed. For paving stones, periodically add joint material (sand) to replace material that has been transported.
- At a minimum, the porous pavers shall be cleaned after the winter season and every three months thereafter. This requirement may be adjusted as needed, based on regular visual inspections of the paver surface.
- Periodically reseed grass pavers to fill in bare spots.
- Never seal or pave with impermeable materials.
- When infiltrative capacity of porous pavers is reduced to less than the design rate, the pavers and base materials shall be replaced.

Stormwater Outfalls

Inspect flared end sections and associated riprap spillways at least once per year and after major storm events (rainfall totals greater than 2.5 inches in 24 hours) to ensure that the stability of the outlet area is maintained. Keep the outfall area clear of debris such as trash, branches, and sediment. Make repairs immediately if riprap displacement or downstream channel scour is observed.

Level Spreaders

Inspect level spreaders regularly, especially after major storm events (rainfall totals greater than 2.5 inches in 24 hours). Repair any erosion or low spots in the level spreader.

3.3 Street Sweeping

Perform street sweeping at least twice per year and whenever there is significant debris present on roads and parking lots. Street sweeping shall occur in March (or before spring rains begin) and November (or before the first snow storm). Sweepings must be handled and disposed of properly according to the Conservation Commission.

3.4 Repair of the Stormwater Management System

The stormwater management system shall be maintained. The repair of any component of the system shall be made as soon as possible to prevent any potential pollutants including silt from entering the resource areas or the existing closed drainage system.

3.5 Reporting

The Owner shall maintain a record of drainage system inspections and maintenance (per this Plan) and submit a yearly report to the Conservation Commission.

STORMWATER MANAGEMENT SYSTEM INSPECTION & MAINTENANCE FORM

The Resort at Suffolk Downs
East Boston, MA

Inspected by:_____
Date:_____

Component	Status/Inspection	Action Taken
Deep Sump Catch Basins, Area Drains and Drain Manholes		
Sediment Forebays

APPENDIX E

DRAFT Stormwater Pollution Prevention Plan (SWPPP)

Construction SWPPP Template

Instructions

To help you develop your construction project Stormwater Pollution Prevention Plan (SWPPP), the U.S Environmental Protection Agency (EPA) has created this SWPPP Template. The template is designed to help you develop a SWPPP that is compliant with the minimum requirements of EPA's 2012 Construction General Permit ("2012 CGP"), and is customizable to your specific project and site.

Using the SWPPP Template

Each section of the SWPPP Template includes "instructions" and space for your project and site information. You should read the instructions for each section before you complete that section. The SWPPP Template was developed as an editable document file so that you can easily add tables and additional text, and delete unneeded or non-applicable fields. Note that some sections may require only a brief description while others may require several pages of explanation.

The following tips for using this template will help you ensure that the minimum permit requirements are met:

- Read the 2012 CGP thoroughly before you begin preparation of your SWPPP to ensure that you have a working understanding of the permit's underlying requirements. You will also need to consult Part 9 of the permit to determine if your state or tribe has included additional requirements that affect you.
- Complete the SWPPP prior to submitting your Notice of Intent (NOI) for permit coverage. This is required in Parts 1.4 and 7.1.1.
- If you prepared a SWPPP for coverage under a previous version of EPA's CGP, you must review and update your SWPPP to ensure that the 2012 CGP requirements are addressed prior to submitting your NOI.

  Note: If your project is an "existing project" (see Part 1.4.2.b) or if you are a "new operator of an existing project" (see Part 1.4.2.c), and it is infeasible for you to comply with a specific requirement in Part 2.1 and 2.3.3 through 2.3.5 of the permit (except for Parts 2.3.3.1, 2.3.3.2b, 2.3.3.3c.i, and 2.3.3.4) because (1) the provision was not part of the permit you were previously covered under (i.e., the 2003 or 2008 CGP), and (2) because you are prevented from compliance due to the nature or location of earth disturbances that commenced prior to February 16, 2012, or because you are unable to comply with the requirement due to the manner in which stormwater controls have already been installed or were already designed prior to February 16, 2012, you are required to include documentation in your SWPPP of the reasons why it is infeasible for you to meet the specific requirement, and then you may be waived from complying with the requirement. You must include a separate justification why it is infeasible for you to meet each of the applicable requirements.

- If there is more than one construction operator for your project, consider coordinating development of your SWPPP with the other operators. However, while multiple operators may share the same SWPPP, make sure that responsibilities and scope of work are clearly described for each operator.
- Once you have been provided coverage under the CGP, include your NOI and authorization email, as well as a copy of the CGP, as attachments to the SWPPP. See Appendices B and C of the SWPPP Template.

EPA notes that while EPA has made every effort to ensure the accuracy of all instructions and guidance contained in the SWPPP Template, the actual obligations of regulated construction activities are determined by the relevant provisions of the permit, not by the Template. In the event of a conflict between the SWPPP Template and any corresponding provision of the 2012 CGP, you must abide by the requirements in the permit. EPA welcomes comments on the SWPPP Template at any time and will consider those comments in any future revision of this document. You may contact EPA for CGP-related inquiries at cgp@epa.gov.

Stormwater Pollution Prevention Plan (SWPPP)

For Construction Activities At:

SECTION 2: SITE EVALUATION, ASSESSMENT, AND PLANNING

2.1 Project/Site Information

Project Name and Address

Project/Site Name: Resort at Suffolk Downs
Project Street/Location: 525 McClellan Highway
City: East Boston
State: MA
ZIP Code: 02128
County or Similar Subdivision: Suffolk

Project Latitude/Longitude

(Use **one** of three possible formats, and specify method)

Latitude:	Longitude:
1. 42 ° 23 ' 36.24" N (degrees, minutes, seconds)	1. 70 ° 59 ' 52.73" W (degrees, minutes, seconds)
2. _ _ ° _ _ . _ _ ' N (degrees, minutes, decimal)	2. _ _ ° _ _ . _ _ ' W (degrees, minutes, decimal)
3. _ _ . _ _ _ _ ° N (decimal)	3. _ _ . _ _ _ _ ° W (decimal)

Method for determining latitude/longitude:
☐ USGS topographic map (specify scale: _____) ☐ EPA Web site ☐ GPS
☒ Other (please specify): Google Earth

Horizontal Reference Datum:
☐ NAD 27 ☒ NAD 83 or WGS 84 ☐ Unknown

If you used a U.S.G.S topographic map, what was the scale? _____

Additional Project Information

Is the project/site located on Indian country lands, or located on a property of religious or cultural significance to an Indian tribe? ☐ Yes ☒ No

If yes, provide the name of the Indian tribe associated with the area of Indian country (including the name of Indian reservation if applicable), or if not in Indian country, provide the name of the Indian tribe associated with the property:

If you are conducting earth-disturbing activities in response to a public emergency, document the cause of the public emergency *(e.g., natural disaster, extreme flooding conditions)*, information substantiating its occurrence *(e.g., state disaster declaration)*, and a description of the construction necessary to reestablish effective public services:

Are you applying for permit coverage as a "federal operator" as defined in Appendix A of the 2012 CGP? ☐ Yes ☒ No

2.2 Discharge Information

Does your project/site discharge stormwater into a Municipal Separate Storm Sewer System (MS4)? ☐ Yes ☒ No

Are there any surface waters that are located within 50 feet of your construction disturbances?
☒ Yes ☐ No

Table 1 – Names of Receiving Waters

Name(s) of the first surface water that receives stormwater directly from your site and/or from the MS4 (note: multiple rows provided where your site has more than one point of discharge that flows to different surface waters)
1. Sales Creek
2.
3.
4.
5.
6.

Table 2 – Impaired Waters / TMDLs (Answer the following for each surface water listed in Table 1 above)

	Is this surface water listed as "impaired"?	If you answered yes, then answer the following:			
		What pollutant(s) are causing the impairment?	Has a TMDL been completed?	Title of the TMDL document	Pollutant(s) for which there is a TMDL
1.	☒ YES ☐ NO	**Pathogens**	☒ YES ☐ NO	**Draft Pathogen TMDL for the Boston Harbor Watershed (excluding the Neponset River sub-basin)**	**Pathogens**
2.	☐ YES ☐ NO		☐ YES ☐ NO		
3.	☐ YES ☐ NO		☐ YES ☐ NO		
4.	☐ YES ☐ NO		☐ YES ☐ NO		
5.	☐ YES ☐ NO		☐ YES ☐ NO		
6.	☐ YES ☐ NO		☐ YES ☐ NO		

Describe the method(s) you used to determine whether or not your project/site discharges to an impaired water:
http://www.mass.gov/dep/water/resources/bharbor1.pdf

Table 3 – Tier 2, 2.5, or 3 Waters (Answer the following for each surface water listed in Table 1 above)

	Is this surface water designated as a Tier 2, Tier 2.5, or Tier 3 water? (see Appendix F)	If you answered yes, specify which Tier (2, 2.5, or 3) the surface water is designated as?
1.	☐ YES ☒ NO	INSERT "Tier 2", "Tier 2.5", or "Tier 3"
2.	☐ YES ☐ NO	INSERT "Tier 2", "Tier 2.5", or "Tier 3"
3.	☐ YES ☐ NO	INSERT "Tier 2", "Tier 2.5", or "Tier 3"
4.	☐ YES ☐ NO	INSERT "Tier 2", "Tier 2.5", or "Tier 3"
5.	☐ YES ☐ NO	INSERT "Tier 2", "Tier 2.5", or "Tier 3"
6.	☐ YES ☐ NO	INSERT "Tier 2", "Tier 2.5", or "Tier 3"

2.3 Nature of the Construction Activity

General Description of Project
Provide a general description of the construction project:

Caesars Resort at Suffolk Downs is a redevelopment proposed on approximately 161 acres of land that will contain two distinct gaming areas (referred to herein as "Casino Area I" and "Casino Area II"), up to 450 guestrooms in two hotels, a multi-purpose meeting/entertainment space, dedicated covered parking, fine dining, and retail space. The Proponent proposes to construct substantial infrastructure improvements on Route 1A in the vicinity of the Project site as an integral part of the Project. The Project elements are more specifically listed below:

- Two hotels: an approximately 300-room Hotel I and an approximately 150-room Hotel II;
- Multi-purpose meeting/entertainment space;
- Dining: approximately 16 restaurants including fine dining concepts, casual outlets, and a food court;
- Gaming Space: approximately 200,000 square feet of gaming space containing 4,000-5,000 slot machines, 200 table games, and a World Series of Poker™ room;
- Retail: approximately 30,000 square feet;
- Central Utility Plant (CUP); and
- Parking: a total of approximately 5,000 parking spaces including structural and surface parking spaces.

The Project also involves continued operations at the Suffolk Downs racetrack as well as continued maintenance in the existing horse barn area.

Size of Construction Project
What is the size of the property (in acres), the total area expected to be disturbed by the construction activities (in acres), and the maximum area expected to be disturbed at any one time?

SIZE OF PROPERTY: 161 acres
AREA OF CONSTRUCTION DISTURBANCES: 161 Acres

Construction Support Activities (only provide if applicable)
Describe any construction support activities for the project (e.g., concrete or asphalt batch plants, equipment staging yards, material storage areas, excavated material disposal areas, borrow areas)

2.4 Sequence and Estimated Dates of Construction Activities

TO BE DETERMINED BY GENERAL CONTRACTOR PRIOR TO CONSTRUCTION

The project is anticipated to start in June 2014 and be completed in July 2016.

2.5 Allowable Non-Stormwater Discharges

List of Allowable Non-Stormwater Discharges Present at the Site

Type of Allowable Non-Stormwater Discharge	Likely to be Present at Your Site?
Discharges from emergency fire-fighting activities	☐ YES ☒ NO
Fire hydrant flushings	☐ YES ☒ NO
Landscape irrigation	☒ YES ☐ NO
Waters used to wash vehicles and equipment	☒ YES ☐ NO
Water used to control dust	☒ YES ☐ NO
Potable water including uncontaminated water line flushings	☒ YES ☐ NO
Routine external building wash down	☒ YES ☐ NO
Pavement wash waters	☒ YES ☐ NO
Uncontaminated air conditioning or compressor condensate	☒ YES ☐ NO
Uncontaminated, non-turbid discharges of ground water or spring water	☒ YES ☐ NO
Foundation or footing drains	☒ YES ☐ NO
Construction dewatering water	☒ YES ☐ NO

(Note: You are reminded of the requirement to identify the likely locations of these allowable non-stormwater discharges on your site map. See Section 2.6, below, of the SWPPP Template.)

2.6 Site Maps

SECTION 3: DOCUMENTATION OF COMPLIANCE WITH OTHER FEDERAL REQUIREMENTS

3.1 Endangered Species Protection

Eligibility Criterion

Under which criterion listed in Appendix D are you eligible for coverage under this permit?

☒ **A** ☐ **B** ☐ **C** ☐ **D** ☐ **E**

For reference purposes, the eligibility criteria listed in Appendix D are as follows:

Criterion A. No federally-listed threatened or endangered species or their designated critical habitat(s) are likely to occur in your site's "action area" as defined in Appendix A of this permit.

Criterion B. The construction site's discharges and discharge-related activities were already addressed in another operator's valid certification of eligibility for your action area under eligibility Criterion A, C, D, E, or F and there is no reason to believe that federally-listed species or federally-designated critical habitat not considered in the prior certification may be present or located in the "action area". To certify your eligibility under this Criterion, there must be no lapse of NPDES permit coverage in the other operator's certification. By certifying eligibility under this Criterion, you agree to comply with any effluent limitations or conditions upon which the other operator's certification was based. You must include in your NOI the tracking number from the other operator's notification of authorization under this permit. If your certification is based on another operator's certification under Criterion C, you must provide EPA with the relevant supporting information required of existing dischargers in Criterion C in your NOI form.

Criterion C. Federally-listed threatened or endangered species or their designated critical habitat(s) are likely to occur in or near your site's "action area," and your site's discharges and discharge-related activities are not likely to adversely affect listed threatened or endangered species or critical habitat. This determination may include consideration of any stormwater controls and/or management practices you will adopt to ensure that your discharges and discharge-related activities are not likely to adversely affect listed species and critical habitat. To make this certification, you must include the following in your NOI: 1) any federally listed species and/or designated habitat located in your "action area"; and 2) the distance between your site and the listed species or designated critical habitat (in miles). You must also include a copy of your site map with your NOI.

Criterion D. Coordination between you and the Services has been concluded. The coordination must have addressed the effects of your site's discharges and discharge-related activities on federally-listed threatened or endangered species and federally-designated critical habitat, and must have resulted in a written concurrence from the relevant Service(s) that your site's discharges and discharge-related activities are not likely to adversely affect listed species or critical habitat. You must include copies of the correspondence between yourself and the Services in your SWPPP and your NOI.

Criterion E. Consultation between a Federal Agency and the U.S. Fish and Wildlife Service and/or the National Marine Fisheries Service under section 7 of the ESA has been concluded. The consultation must have addressed the effects of the construction site's discharges and discharge-related activities on federally-listed threatened or endangered species and federally-designated critical habitat. The result of this consultation must be either:

i. a biological opinion that concludes that the action in question (taking into account the effects of your site's discharges and discharge-related activities) is not likely to jeopardize the continued existence of listed species, nor the destruction or adverse modification of critical habitat; or

ii. written concurrence from the applicable Service(s) with a finding that the site's discharges and discharge-related activities are not likely to adversely affect federally-listed species or federally-designated habitat.

You must include copies of the correspondence between yourself and the Services in your SWPPP and your NOI.

Criterion F. Your construction activities are authorized through the issuance of a permit under section 10 of the ESA, and this authorization addresses the effects of the site's discharges and discharge-related activities on federally-listed species and federally-designated critical habitat. You must include copies of the correspondence between yourself and the Services in your SWPPP and your NOI.

Supporting Documentation

Provide documentation for the applicable eligibility criterion you select in Appendix D, as follows:

For criterion A, indicate the basis for your determination that no federally-listed threatened or endangered species or their designated critical habitat(s) are likely to occur in your site's action area (as defined in Appendix A of the permit). Check the applicable source of information you relied upon:

- ☐ Specific communication with staff of the U.S. Fish & Wildlife Service or National Marine Fisheries Service.
- ☒ Publicly available species list. NHESP Priority Habitats online viewer and GIS data
- ☐ Other source:

3.2 Historic Preservation

Appendix E, Step 1

Do you plan on installing any of the following stormwater controls at your site? Check all that apply below, and proceed to Appendix E, Step 2.

- ☐ Dike
- ☐ Berm
- ☒ Catch Basin
- ☐ Pond
- ☒ Stormwater Conveyance Channel (e.g., ditch, trench, perimeter drain, swale, etc.)
- ☒ Culvert
- ☒ Other type of ground-disturbing stormwater control: proprietary water quality structures, bioretention basin, rainwater harvesting cistern, porous pavers

(Note: If you will not be installing any ground-disturbing stormwater controls, no further documentation is required for Section 3.2 of the Template.)

Appendix E, Step 2

If you answered yes in Step 1, have prior surveys or evaluations conducted on the site already determined that historic properties do not exist, or that prior disturbances at the site have precluded the existence of historic properties? ☒ YES ☐ NO

- If yes, no further documentation is required for Section 3.2 of the Template.
- If no, proceed to Appendix E, Step 3.

Appendix E, Step 3

If you answered no in Step 2, have you determined that your installation of subsurface earth-disturbing stormwater controls will have no effect on historic properties? ☐ YES ☐ NO

If yes, provide documentation of the basis for your determination. INSERT REFERENCES TO DOCUMENTS, STUDIES, OR OTHER SOURCES RELIED UPON

If no, proceed to Appendix E, Step 4.

Appendix E, Step 4

If you answered no in Step 3, did the State Historic Preservation Officer (SHPO), Tribal Historic Preservation Office (THPO), or other tribal representative (whichever applies) respond to you within 15 calendar days to indicate whether the subsurface earth disturbances caused by the installation of stormwater controls affect historic properties? ☐ YES ☐ NO

If no, no further documentation is required for Section 3.2 of the Template.

If yes, describe the nature of their response:

☐ Written indication that adverse effects to historic properties from the installation of stormwater controls can be mitigated by agreed upon actions. INSERT COPIES OF LETTERS, EMAILS, OR OTHER COMMUNICATION BETWEEN YOU AND THE APPLICABLE SHPO, THPO, OR OTHER TRIBAL REPRESENTATIVE

☐ No agreement has been reached regarding measures to mitigate effects to historic properties from the installation of stormwater controls. INSERT COPIES OF LETTERS, EMAILS, OR OTHER COMMUNICATION BETWEEN YOU AND THE APPLICABLE SHPO, THPO, OR OTHER TRIBAL REPRESENTATIVE

☐ Other: INSERT COPIES OF LETTERS, EMAILS, OR OTHER COMMUNICATION BETWEEN YOU AND THE APPLICABLE SHPO, THPO, OR OTHER TRIBAL REPRESENTATIVE

3.3 Safe Drinking Water Act Underground Injection Control Requirements

Do you plan to install any of the following controls? Check all that apply below.

- ☐ Infiltration trenches (if stormwater is directed to any bored, drilled, driven shaft or dug hole that is deeper than its widest surface dimension, or has a subsurface fluid distribution system)
- ☒ Commercially manufactured pre-cast or pre-built proprietary subsurface detention vaults, chambers, or other devices designed to capture and infiltrate stormwater flow
- ☐ Drywells, seepage pits, or improved sinkholes (if stormwater is directed to any bored, drilled, driven shaft or dug hole that is deeper than its widest surface dimension, or has a subsurface fluid distribution system)

If yes, INSERT COPIES OF LETTERS, EMAILS, OR OTHER COMMUNICATION BETWEEN YOU AND THE STATE AGENCY OR EPA REGIONAL OFFICE

SECTION 4: EROSION AND SEDIMENT CONTROLS

General Instructions (See CGP Parts 2.1 and 7.2.10):

- Describe the erosion and sediment controls that will be installed and maintained at your site.
- For more information or ideas on BMPs, see EPA's National Menu of BMPs http://www.epa.gov/npdes/stormwater/menuofbmps

4.1 Natural Buffers or Equivalent Sediment Controls

Instructions (see CGP Parts 2.1.2.1 and 7.2.9, and Appendix G):

This section only applies to you if a surface water is located within 50 feet your construction activities. If this is the case, consult CGP Part 2.1.2.1 and Appendix G for information on how to comply with the buffer requirements.

- Describe the compliance alternative (CGP Part 2.1.2.1.a.i, ii, or iii) that was chosen to meet the buffer requirements, and include any required documentation supporting the alternative selected. The compliance alternative selected must be maintained throughout the duration of permit coverage. However, if you select a different compliance alternative during your period of permit coverage, you must modify your SWPPP to reflect this change.
- If you qualify for one of the exceptions in CGP Part 2.1.2.1.e, include documentation related to your qualification for such exceptions.

Buffer Compliance Alternatives

Are there any surface waters within 50 feet of your project's earth disturbances? ☒ YES ☐ NO

(Note: If no, no further documentation is required for the SWPPP Template.)

Check the compliance alternative that you have chosen:

☐ I will provide and maintain a 50-foot undisturbed natural buffer.

(Note (1): You must show the 50-foot boundary line of the natural buffer on your site map.)

(Note (2): You must show on your site map how all discharges from your construction disturbances through the natural buffer area will first be treated by the site's erosion and sediment controls. Also, show on the site map any velocity dissipation devices used to prevent erosion within the natural buffer area.)

☐ I will provide and maintain an undisturbed natural buffer that is less than 50 feet and is supplemented by additional erosion and sediment controls, which in combination achieves the sediment load reduction equivalent to a 50-foot undisturbed natural buffer.

(Note (1): You must show the boundary line of the natural buffer on your site map.)

(Note (2): You must show on your site map how all discharges from your construction disturbances through the natural buffer area will first be treated by the site's erosion and sediment controls. Also, show on the site map any velocity dissipation devices used to prevent erosion within the natural buffer area.)

☐ It is infeasible to provide and maintain an undisturbed natural buffer of any size, therefore I will implement erosion and sediment controls that achieve the sediment load reduction equivalent to a 50-foot undisturbed natural buffer.

☒ I qualify for one of the exceptions in Part 2.1.2.1.e. (If you have checked this box, provide information on the applicable buffer exception that applies, below.)

Buffer Exceptions

Which of the following exceptions to the buffer requirements applies to your site?

☐ There is no discharge of stormwater to the surface water that is located 50 feet from my construction disturbances.

(Note: If this exception applies, no further documentation is required for Section 4.1 of the Template.)

☒ No natural buffer exists due to preexisting development disturbances that occurred prior to the initiation of planning for this project.

(Note (1): If this exception applies, no further documentation is required for Section 4.1 of the Template.)

(Note (2): Where some natural buffer exists but portions of the area within 50 feet of the surface water are occupied by preexisting development disturbances, you must still comply with the one of the CGP Part 2.1.2.1.a compliance alternatives.)

☐ For a "linear project" (defined in Appendix A), site constraints (e.g., limited right-of-way) make it infeasible for me to meet any of the CGP Part 2.1.2.1.a compliance alternatives. INCLUDE DOCUMENTATION HERE OF THE FOLLOWING: (1) WHY IT IS INFEASIBLE FOR YOU TO MEET ONE OF THE BUFFER COMPLIANCE ALTERNATIVES, AND (2) BUFFER WIDTH RETAINED AND/OR SUPPLEMENTAL EROSION AND SEDIMENT CONTROLS TO TREAT DISCHARGES TO THE SURFACE WATER

☐ The project qualifies as "small residential lot" construction (defined in Part 2.1.2.1.e.iv and in Appendix A).

For Alternative 1 (see Appendix G, Part G.2.3.2.a):

- INSERT WIDTH OF NATURAL BUFFER TO BE RETAINED
- INSERT APPLICABLE REQUIREMENTS BASED ON TABLE G-1
- INSERT DESCRIPTION OF HOW YOU WILL COMPLY WITH THESE REQUIREMENTS

For Alternative 2 (see Appendix G, Part G.2.3.2.b):

- INSERT (1) THE ASSIGNED RISK LEVEL BASED ON APPLICABLE TABLE IN APP. G, PART G.2.3.2.b, AND (2) THE PREDOMINANT SOIL TYPE AND AVERAGE SLOPE AT YOUR SITE
- INSERT APPLICABLE REQUIREMENTS BASED ON APP. G, TABLE G-7
- INSERT DESCRIPTION OF HOW YOU WILL COMPLY WITH THESE REQUIREMENTS

☐ Buffer disturbances are authorized under a CWA Section 404 permit. INSERT DESCRIPTION OF ANY EARTH DISTURBANCES THAT WILL OCCUR WITHIN THE BUFFER AREA

(Note (1): If this exception applies, no further documentation is required for Section 4.1 of the Template.)

(Note (2): This exception only applies to the limits of disturbance authorized under the Section 404 permit, and does not apply to any upland portion of the construction project.)

☐ Buffer disturbances will occur for the construction of a water-dependent structure or water access area (e.g., pier, boat ramp, and trail). INSERT DESCRIPTION OF ANY EARTH DISTURBANCES THAT WILL OCCUR WITHIN THE BUFFER AREA

(Note (1): If this exception applies, no further documentation is required for Section 4.1 of the Template.)

4.2 Perimeter Controls

General

The area of construction activity will be enclosed with a combination chain link fence, wind screen, and silt fence. The sediment controls will be installed along those perimeter areas of the site that will receive stormwater from earth-disturbing activities as shown on the plan. Gates will be constructed as shown on the plans to allow for construction vehicle access.

Specific Perimeter Controls

Perimeter Control # 1

- BMP Description: Silt Fence/Straw bales
- Installation Schedule: Start of construction
- Maintenance and Inspection: Weekly & after storm events greater than 1/4"
- Responsible Staff: **Construction Manager** and **Site Contractor**

Perimeter Control # 2

- BMP Description: Super Silt Fence
- Installation Schedule: Start of construction
- Maintenance and Inspection: Weekly & after storm events greater than 1/4"
- Responsible Staff: **Construction Manager** and **Site Contractor**

Perimeter Control # 3

- BMP Description: Sediment Trap
- Installation Schedule: Start of dewatering activities
- Maintenance and Inspection: Weekly & after storm events greater than 1/4"
- Responsible Staff: **Construction Manager** and **Site Contractor**

Perimeter Control # 4

- BMP Description: Check Dams
- Installation Schedule: Start of construction
- Maintenance and Inspection: Weekly & after storm events greater than 1/4"
- Responsible Staff: **Construction Manager** and **Site Contractor**

4.3 Sediment Track-Out

General

Gates will be constructed as shown on the plans to allow for construction vehicle access. Construction access points will either have a stabilized construction entrance at the access location or a wheel wash station to minimize the track-out of sediment onto off-site streets, other paved areas, and sidewalks from vehicles exiting the construction site. Sediment tracked offsite must be removed by the end of the same workday.

Specific Track-Out Controls

Track-Out Control # 1

- BMP Description: Designated truck washing area
  - ☐ Permanent ☒ Temporary
- Installation Schedule: Start of construction
- Maintenance and Inspection: Weekly & after storm events greater than 1/4"
- Responsible Staff: **Construction Manager** and **Site Contractor**

Track-Out Control # 2

- BMP Description: Stone filter berm
  - ☐ Permanent ☒ Temporary
- Installation Schedule: Start of construction
- Maintenance and Inspection: Weekly & after storm events greater than 1/4"
- Responsible Staff: **Construction Manager** and **Site Contractor**

Track-Out Control # 3

- BMP Description: Wheel Wash station and Gravel
- Installation Schedule: Start of construction
- Maintenance and Inspection: Daily
- Responsible Staff: **Construction Manager** and **Site Contractor**

Track-Out Control # 4

- BMP Description: Street Sweeping
- Installation Schedule: Start of construction
- Maintenance and Inspection: Weekly or as needed
- Responsible Staff **Construction Manager** and **Site Contractor**

4.4 Stockpiled Sediment or Soil

General

All soil stockpiles are to be located away from existing catch basin structures and shall be protected from contact with onsite stormwater runoff using temporary perimeter sediment barriers.

Soil stockpiles shall also be provided with cover (a tarp) or appropriate temporary stabilization to avoid direct contact with precipitation and to minimize sediment discharge. All excavated soil will be stockpiled in the designated areas onsite. Soil stabilization measures shall be initiated immediately when earth-disturbing activities have permanently or temporarily ceased on any portion of the site. Earth-disturbing activities are considered temporarily ceased when work will not resume for a period of 14 or more calendar days. Stabilization activities shall be completed within 14 calendar days after the initiation of soil stabilization measures. Hay bales or a silt fence may be placed around the perimeter of stockpiles to contain sediments. Stabilized portions of a site shall be inspected at least once per month. In landscaped areas or areas where infiltration practices will be installed, soil compaction shall be minimized. This includes restricting vehicle and equipment use and conditioning soil to support vegetative growth. When utilizing sediment basins, use outlet structures that withdraw water from the surface of the basins.

Specific Stockpile Controls

Stockpile Control # 1

- BMP Description: Soil Stabilization Mats
- Installation Schedule: As/if required
- Maintenance and Inspection: Weekly & after storm events greater than 0.25"
- Responsible Staff: **Construction Manager** and **Site Contractor**

Stockpile Control # 2

- BMP Description: Rip-Rap
- Installation Schedule: As/if required
- Maintenance and Inspection: Weekly & after storm events greater than 0.25"
- Responsible Staff: **Construction Manager** and **Site Contractor**

Stockpile Control # 3

- BMP Description: Silt fabric Catch Basin Inlet Protection
- Installation Schedule: Start of construction
- Maintenance and Inspection: Weekly & after storm events greater than 0.25"
- Responsible Staff: **Construction Manager** and **Site Contractor**

Stockpile Control # 4

- BMP Description: Block and Gravel Inlet Protection
- Installation Schedule: Start of construction
- Maintenance and Inspection: Weekly & after storm events greater than 0.25"
- Responsible Staff: **Construction Manager** and **Site Contractor**

Stockpile Control # 5

- BMP Description: Silt Sacks
- Installation Schedule: Start of construction
- Maintenance and Inspection: Weekly & after storm events greater than 0.25"
- Responsible Staff: **Construction Manager** and **Site Contractor**

4.5 Minimize Dust

General

Soils shall be stabilized with temporary seeding and mulching or a tarp to prevent blowing dust and siltation into the storm drain system. Hay bales or a silt fence may be placed around the perimeter of stockpiles to contain sediments.

Specific Dust Controls

Dust Control # 1

- BMP Description: Contractor's seed mix
  - ☐ Permanent ☒ Temporary
- Installation Schedule: Start of earthwork activities
- Maintenance and Inspection: Weekly & after storm events greater than 1/4"
- Responsible Staff: **Construction Manager** and **Site Contractor**

Dust Control # 2

- BMP Description: Hydro Seeding
  - ☐ Permanent ☒ Temporary
- Installation Schedule: Start of earthwork activities
- Maintenance and Inspection: Weekly & after storm events greater than 1/4"
- Responsible Staff: **Construction Manager** and **Site Contractor**

Dust Control # 3

- BMP Description: Straw or Mulch
  - ☐ Permanent ☒ Temporary
- Installation Schedule: Start of earthwork activities
- Maintenance and Inspection: Weekly & after storm events greater than 1/4"
- Responsible Staff: **Construction Manager** and **Site Contractor**

Dust Control # 4

- BMP Description: Annual Rye Seed Mix
  - ☐ Permanent ☒ Temporary
- Installation Schedule: Start of earthwork activities
- Maintenance and Inspection: Weekly & after storm events greater than 1/4"
- Responsible Staff: **Construction Manager** and **Site Contractor**

4.6 Minimize the Disturbance of Steep Slopes

General

Disturbance of slopes 15% or greater shall be minimized. Steep slopes will be stabilized against erosion by the use of a temporary vegetative cover. Stabilized portions of a site shall be inspected at least one per month.

Specific Steep Slope Controls

Steep Slope Control # 1

- BMP Description: Straw or Mulch
- Installation Schedule: Start of earthwork activities
- Maintenance and Inspection: Weekly & after storm events greater than 1/4"
- Responsible Staff: **Construction Manager** and **Site Contractor**

Steep Slope Control # 2

- BMP Description: Contractor's seed mix
- Installation Schedule: Start of earthwork activities
- Maintenance and Inspection: Weekly & after storm events greater than 1/4"
- Responsible Staff: **Construction Manager** and **Site Contractor**

Steep Slope Control # 3

- BMP Description: Hydro Seeding
- Installation Schedule: Start of earthwork activities
- Maintenance and Inspection: Weekly & after storm events greater than 1/4"
- Responsible Staff: **Construction Manager** and **Site Contractor**

Steep Slope Control # 4

- BMP Description: Soil Stabilization Mats
- Installation Schedule: Start of earthwork activities
- Maintenance and Inspection: Weekly & after storm events greater than 1/4"
- Responsible Staff: **Construction Manager** and **Site Contractor**

Steep Slope Control # 5

- BMP Description: Rip-Rap

  ☐ Permanent ☒ Temporary
- Installation Schedule: Start of earthwork activities
- Maintenance and Inspection: Weekly & after storm events greater than 1/4"
- Responsible Staff: **Construction Manager** and **Site Contractor**

4.7 Topsoil

General

Onsite native topsoil shall be preserved, unless infeasible. Soil stabilization measures shall be initiated immediately when earth-disturbing activities have permanently or temporarily ceased on any portion of the site. Earth-disturbing activities are considered temporarily ceased when work will not resume for a period of 14 or more calendar days. Stabilization activities shall be completed within 14 calendar days after the initiation of soil stabilization measures.

Specific Topsoil Controls

Topsoil Control # 1

- BMP Description: Contractor's seed mix
  - ☐ Permanent ☒ Temporary
- Installation Schedule: Start of earthwork activities
- Maintenance and Inspection: Weekly & after storm events greater than 1/4"
- Responsible Staff: **Construction Manager** and **Site Contractor**

Topsoil Control # 2

- BMP Description: Hydro Seeding
  - ☐ Permanent ☒ Temporary
- Installation Schedule: Start of earthwork activities
- Maintenance and Inspection: Weekly & after storm events greater than 1/4"
- Responsible Staff: **Construction Manager** and **Site Contractor**

Topsoil Control # 3

- BMP Description: Straw or Mulch
  - ☐ Permanent ☒ Temporary
- Installation Schedule: Start of earthwork activities
- Maintenance and Inspection: Weekly & after storm events greater than 1/4"
- Responsible Staff: **Construction Manager** and **Site Contractor**

Topsoil Control # 4

- BMP Description: Annual Rye Seed Mix
  - ☐ Permanent ☒ Temporary
- Installation Schedule: Start of earthwork activities
- Maintenance and Inspection: Weekly & after storm events greater than 1/4"
- Responsible Staff: **Construction Manager** and **Site Contractor**

4.8 Soil Compaction

General

In landscaped areas or areas where infiltration practices will be installed, soil compaction shall be minimized. This includes restricting vehicle and equipment use and conditioning soil to support vegetative growth. When utilizing sediment basins, use outlet structures that withdraw water from the surface of the basins.

Specific Soil Compaction Controls – TO BE DETERMINED BY GENERAL CONTRACTOR PRIOR TO CONSTRUCTION

Soil Compaction Control # 1

Soil Compaction Control Description

- INSERT DESCRIPTION OF SOIL COMPACTION CONTROL TO BE INSTALLED
- INCLUDE COPIES OF DESIGN SPECIFICATIONS HERE

Installation

- INSERT APPROXIMATE DATE OF INSTALLATION

Maintenance Requirements

- INSERT MAINTENANCE REQUIREMENTS FOR THE SOIL COMPACTION CONTROL

[Repeat as needed for individual soil compaction controls.]

4.9 Storm Drain Inlets

Specific Storm Drain Inlet Controls

Storm Drain Inlet Control # 1

- BMP Description: Silt fabric Catch Basin Inlet Protection
- Design Specifications: Found on Detail Sheet C504
- Installation Schedule: Start of site disturbance activities
- Inspection: Weekly & after storm events greater than 0.25"
- Maintenance: Clean, or remove and replace, the protection measures as sediment accumulates, the filter becomes clogged, and/or performance is compromised. Where there is evidence of sediment accumulation adjacent to the inlet protection measure, you must remove the deposited sediment by the end of the same work day in which it is found or by the end of the following work day if removal by the same work day is not feasible.
- Responsible Staff: Construction Manager and Site Contractor

Storm Drain Inlet Control # 2

- BMP Description: Silt Sacks
- Design Specifications: As needed
- Installation Schedule: Start of site disturbance activities
- Inspection: Weekly & after storm events greater than 0.25"
- Maintenance: Clean, or remove and replace, the protection measures as

sediment accumulates, the filter becomes clogged, and/or performance is compromised. Where there is evidence of sediment accumulation adjacent to the inlet protection measure, you must remove the deposited sediment by the end of the same work day in which it is found or by the end of the following work day if removal by the same work day is not feasible.

- Responsible Staff: Construction Manager and Site Contractor

4.10 Constructed Stormwater Conveyance Channels

Specific Conveyance Channel Controls

Stormwater Conveyance Channel Control # 1

- BMP Description: Check Dams
- Installation Schedule: Start of construction
- Maintenance and Inspection: Weekly & after storm events greater than 1/4"
- Responsible Staff: **Construction Manager** and **Site Contractor**

Stormwater Conveyance Channel Control # 2

- BMP Description: Rip-Rap

  ☐ Permanent ☒ Temporary
- Installation Schedule: Start of earthwork activities
- Maintenance and Inspection: Weekly & after storm events greater than 1/4"
- Responsible Staff: **Construction Manager** and **Site Contractor**

4.11 Sediment Basins

Specific Sediment Basin Controls

Sediment Basin Control # 1

- BMP Description: Weir
- Installation Schedule: Start of earthwork activities
- Maintenance and Inspection: Weekly & after storm events greater than 1/4"
- Responsible Staff: **Construction Manager** and **Site Contractor**

4.12 Chemical Treatment

There are no proposed chemical treatments associated with this project, and therefore no proposed BMP's.

4.13 Dewatering Practices

Specific Dewatering Practices

Dewatering Practice # 1

- BMP Description: Sediment Trap
  - ☐ Permanent ☒ Temporary
- Installation Schedule: Start of de-watering activities
- Maintenance and Inspection: Weekly & after 1/4" storm events
- Responsible Staff: **Construction Manager** and **Site Contractor**

Dewatering Practice # 2

- BMP Description: Stone filter berm
  - ☐ Permanent ☒ Temporary
- Installation Schedule: Start of construction
- Maintenance and Inspection: Weekly & after storm events greater than 1/4"
- Responsible Staff: **Construction Manager** and **Site Contractor**

4.14 Other Stormwater Controls

Any changes in construction activity that produce other allowable non-stormwater discharges will be identified, the SWPPP will be amended, and the appropriate erosion and sedimentation controls will be implemented.

4.15 Site Stabilization

Site Stabilization Practice (only use this if you are not located in an arid, semi-arid, or drought-stricken area)

All excavated soil will be stockpiled in the designated areas onsite. Soil stabilization measures shall be initiated immediately when earth-disturbing activities have permanently or temporarily ceased on any portion of the site. Earth-disturbing activities are considered temporarily ceased when work will not resume for a period of 14 or more calendar days. Stabilization activities shall be completed within 14 calendar days after the initiation of soil stabilization measures. It shall be stabilized with temporary soil stabilization mats or a tarp to prevent blowing dust and siltation into the storm drain system.

☐ *Vegetative* ☒ *Non-Vegetative*
☒ *Temporary* ☐ *Permanent*

- BMP Description: Soil Stabilization Mat
- Installation Schedule: As/if required
- Maintenance and Inspection: Weekly & after storm events greater than 0.25"
- Responsible Staff: Construction Manager and Site Contractor

SECTION 5: POLLUTION PREVENTION STANDARDS

5.1 Potential Sources of Pollution

Potential sources of sediment to stormwater runoff:

- Stockpiles and construction staging
- Clearing and grubbing operations
- Grading and site excavation
- Topsoil stripping
- Landscape operations
- Soil tracking offsite from construction vehicles
- Runoff from unstabilized areas
- Construction debris

Potential pollutants and sources, other than sediment, to stormwater runoff:

- Combined Staging Area – fueling activities, equipment maintenance, sanitary facilities, and hazardous waste storage
- Materials Storage Area – building materials, solvents, adhesives, paving materials, paints, aggregates, trash, etc.
- Construction Activity-paving, curb installation, concrete pouring, and building construction

The **Contractor** shall coordinate staging areas with the **Owner.** The location of all staging areas will be determined for each phase of construction and shown on plans produced by The Contractor.

Potential Site Pollutants

MATERIALS/ CHEMICAL	PHYSICAL DESCRIPTION	STORMWATER POLLUTANTS	LOCATION
Pesticides (insecticides, fungicides, herbicides, rodenticides)	Various colored to colorless liquid powder, pellets, or grains	Chlorinated hydrocarbons, organophosphates, carbonates, arsenic	Herbicides used for noxious weed control
Fertilizers	Liquid of solid grains	Nitrogen, phosphorous	Newly seeded areas
Plaster	White granules or powder	Calcium sulphate, calcium carbonate, sulfuric acid	Building construction
Cleaning Solvents	Colorless, blue, or yellow green liquid	Perchloroethylene, methylene chloride, trichloroethylene, petroleum distillates	No equipment cleaning allowed in project limits
Asphalt	Black solid	Oil, petroleum distillates	Streets and parking lots

Concrete	White solid/grey liquid	Limestone, sand pH, chromium	Curb and gutter, sidewalk, building construction
Glue, Adhesives	White or yellow liquid	Polymers, epoxies	Building construction
Paints	Various colored liquid	Metal oxides, Stoddard solvent, talc, calcium carbonate, arsenic	Building construction
Curing compounds	Creamy white liquid	Naphtha	Curb and gutter, building construction
Wood preservatives	Clear amber or dark brown liquid	Stoddard solvent, petroleum distillates, arsenic, copper, chromium	Timber pads, bracing, building construction
Hydraulic Oils/fluids	Brown oily petroleum hydrocarbon	Mineral oil	Leaks/broken hoses from equipment
Gasoline	Colorless, pale brown or pink petroleum hydrocarbon	Benzene, ethyl benzene, toluene, xylene, MTBE	Secondary containment/staging area
Diesel Fuel	Clear, blue-green to yellow liquid	Petroleum distillate, oil & grease, naphthalene, xylenes	Secondary containment/staging area
Kerosene	Pale yellow liquid petroleum hydrocarbon	Coal oil, petroleum distillates	Secondary containment/staging area
Antifreeze/coolant	Clear green/yellow liquid	Ethylene glycol, propylene glycol, heavy metals (copper, lead, zinc)	Leaks or broken hoses from equipment
Sanitary toilets	Various colored liquid	Bacteria, parasites, and viruses	Staging area

5.2 Spill Prevention and Response

If fueling and/or maintenance of equipment or vehicles takes place, an effective means of eliminating the discharge of spilled or leaked chemicals, including fuel, from the area where these activities will take place must be provided. If applicable, the Spill Prevention Control and Countermeasures (SPCC) requirements in 40 CFR 112 and Section 311 of the CWA must be complied with. Adequate supplies must be available at all times to handle spill, leaks, and disposal of used liquids. Drip pans and absorbents must be used under or around leaky vehicles. Oil and oily wastes must be disposed of or recycled in accordance with other federal, state, tribal, or local requirements. Spills or contaminated surfaces must be cleaned up immediately using dry clean up measures where possible, and the source of the spill must be eliminated to prevent a discharge or a furtherance of an ongoing discharge. Surfaces cannot be cleaned by hosing the area down.

Spill Prevention and Control Practice

- BMP Description: Spill kit, vehicle washing, straw bale catch basin protection, silt fence
- Installation Schedule: Start of construction activity
- Maintenance and Inspection: Minimum weekly & as necessary
- Responsible Staff: **Construction Manager** and **Site Contractor**

- Hazardous material handling shall be provided to sub Construction Manager.
- Major vehicle maintenance on-site shall be prohibited
- Re-fueling of vehicles within 25 feet of a drainage structure shall be prohibited
- Spill kit shall be kept on-site consisting of:
    - Gloves
    - Absorbent mats
    - Drip pan

Spill Prevention and Control Plan

- Manufacturers' recommended spill control methods will be posted onsite and site personnel will be made aware of the requirements.
- Cleanup supplies will be kept onsite in a materials storage area. This equipment will include: goggles, brooms, dustpans, mops, rags, gloves, oil absorbent, sawdust, plastic and metal trash cans, and other materials and supplies specifically designated for cleanup.
- All spills will be immediately cleaned up after discovery.
- The spill area will be well ventilated.
- Cleanup personnel will wear suitable protective clothing.
- Spills of toxic and/or hazardous material will be reported to state, local, and Federal authorities, as required by law. Spills shall also be reported immediately to the owner.
- A spill incident report will be filed detailing the amount and extent of the spill, material(s) involved, and effectiveness of the cleanup. This report will be on file at the Construction Manager/ Site Contractor office, as well as kept onsite in the field office. A copy shall also be filed with the Hazard Communication Coordinator (HCC).
- The **Construction Manager/ Site Contractor** will designate someone onsite that will serve as the Spill Cleanup Coordinator. At least two other personnel will be designated as alternate spill coordinators. All spill control personnel will be trained in spill prevention, control, and cleanup.

The names of the responsible personnel will be posted at the jobsite office of the **Construction Manager/ Site Contractor.**

5.3 Fueling and Maintenance of Equipment or Vehicles

Minor vehicle and equipment emergency maintenance can be performed onsite. Major vehicle and equipment maintenance must be performed offsite. Equipment/vehicle storage areas and any onsite fuel tanks will be inspected weekly and after storm events. Equipment and vehicles will be inspected on each day of use. Any leaks will be repaired immediately or the equipment/vehicle will be removed from the site.

Minor vehicle and equipment emergency maintenance shall occur when a vehicle cannot be safely removed from the site. The vehicle should be repaired so it can be taken off-site so that the rest of the maintenance can occur.

Major vehicle maintenance on-site is prohibited. Re-fueling of vehicles within 25 feet of a drainage structure shall be prohibited.

5.4 Washing of Equipment and Vehicles

Pollution Prevention Practice # 1

- BMP Description: Designated truck washing area

  ☐ Permanent ☒ Temporary
- Installation Schedule: Start of construction
- Maintenance and Inspection: Weekly & after storm events greater than 1/4"
- Responsible Staff: **Construction Manager** and **Site Contractor**

5.5 Storage, Handling, and Disposal of Construction Products, Materials, and Wastes

5.5.1 Building Products

Any building materials required to be stored onsite will be stored at a combined staging and materials storage area. Larger items, such as framing materials, will be elevated by appropriate methods to minimize contact with runoff. The storage area will be inspected weekly and after storm events. It will be kept clean, organized, and equipped with appropriate cleaning supplies. Perimeter controls (silt fence, straw bales, gravel bag berms, etc.), containment structures, covers, and liners will be repaired or replaced as needed to maintain proper function.

Building product usage shall follow the following good housekeeping BMPs:

- The Responsible Staff: Construction Manager or Site Contractor representative will inspect daily for proper use, storage, and cleanup of material used on the job site.
- Store only enough material onsite required for that job as to satisfy current construction needs.
- Store required materials in tightly lidded containers under cover.
- Store materials in original containers with clearly legible labels.
- Separate and store materials apart from each other.
- Do not mix materials unless specifically in accordance with manufacturers' recommendations.
- Use all products from a container before disposing of the container.

- Follow manufacturers' instructions for handling, storage, and disposing of all materials.
- All materials shall be stored in an area to prevent the discharge of pollutants from building products.

Pollution Prevention Practice # 1

- BMP Description: Stacked straw bales around soil stockpiles
- Installation Schedule: Start of construction
- Maintenance and Inspection: Weekly & after storm events greater than 0.25"
- Responsible Staff: Construction Manager and Site Contractor

Pollution Prevention Practice # 2

- BMP Description: Silt Fence
- Installation Schedule: Start of construction
- Maintenance and Inspection: Weekly & after storm events greater than 0.25"
- Responsible Staff: Construction Manager and Site Contractor

Pollution Prevention Practice # 3

- BMP Description: Plastic Cover
- Installation Schedule: Start of construction
- Maintenance and Inspection: Weekly & after storm events greater than 0.25"
- Responsible Staff: Construction Manager and Site Contractor

5.5.2 Pesticides, Herbicides, Insecticides, Fertilizers, and Landscape Materials

- Fertilizers will be used at the application rates called for in the specifications for the project.
- Once applied, fertilizer will be worked into the soil to minimize wash off from irrigation and stormwater.
- Fertilizer will be stored under cover.
- The contents of partially used fertilizer bags will be transferred to re-sealable, watertight containers clearly labeled with their contents.

5.5.3 Diesel Fuel, Oil, Hydraulic Fluids, Other Petroleum Products, and Other Chemicals

- Only skilled personnel in a designated area will perform fueling of vehicles onsite.
- Vehicles used onsite will be monitored for fuel and oil leaks.
- Vehicles used onsite will be maintained in good working order.
- Asphalt substances will be applied in accordance with manufacturers' recommendations.
- The use of petroleum products as a release agent for asphalt transport trucks is prohibited.
- Vehicle fueling will only be done in vehicle fueling areas located by the contractor.
- All vehicles parked overnight onsite shall have fuel absorbent pads placed beneath them to absorb any fuel leaks.
- The contractor shall be responsible for locating the fuel storage and re-fueling area onsite to minimize disturbance to construction activates and site area.

5.5.4 Hazardous or Toxic Waste

- Keep products in their original containers.
- Original container labels should be clearly visible.
- Material safety data sheets will be kept onsite and be available.

- Follow all state, local, and Federal regulations regarding the handling, use, storage, and disposal of hazardous material.

Paints:

- All paint containers will be tightly sealed when not in use.
- Remove excess paint in original labeled containers from the jobsite.
- Paint will not be disposed of onsite. Remove excess paint material from the site and legally dispose of.
- Paint shall not be disposed of in the storm drain system.

5.5.5 Construction and Domestic Waste

Pollution Prevention Practice # 1

- BMP Description: Dumpster
- Installation Schedule: Start of construction
- Maintenance and Inspection: Weekly
- Responsible Staff: **Construction Manager** and **Site Contractor**

Pollution Prevention Practice # 2

- BMP Description: Litter/debris pick-up
- Installation Schedule: Start of construction
- Maintenance and Inspection: Daily
- Responsible Staff: **Construction Manager** and **Site Contractor**

5.5.6 Sanitary Waste

Pollution Prevention Practice # 1

- BMP Description: Porta John
- Installation Schedule: Start of construction
- Maintenance and Inspection: As manufacturer requires
- Responsible Staff: Construction Manager and Site Contractor

5.6 Washing of Applicators and Containers used for Paint, Concrete or Other Materials

General

Washing of applicators and containers used for paint, concrete or other materials shall follow the following good housekeeping BMPs:

- An effective means of eliminating the discharge of water from the washout and cleanout of stucco, paint, concrete, form release oils, curing compounds, and other construction materials.
- All washwater must be directed into a leak-proof container or leak-proof pit. The container or pit must be designed so that no overflows can occur due to inadequate sizing or precipitation.
- Washout and cleanout wastes should be handled as follows:
    - Do not dump liquid wastes into storm sewers.
    - Dispose of liquid wastes in accordance with applicable requirements.

  - Remove and dispose of hardened concrete waste consistent with the handling of other construction wastes.
- Locate any washout or cleanout activities as far away as possible from surface waters and stormwater inlets or conveyances, and to the extent practicable, designate areas to be used for these activities and conduct such activities only in these areas.

Specific Pollution Prevention Practices

Pollution Prevention Practice # 1

- BMP Description: Designated applicator and container washing areas
- Installation Schedule: Start of construction
- Maintenance and Inspection: Daily
- Responsible Staff: Construction Manager and Site Contractor

5.7 Fertilizers

General
Fertilizer usage shall follow the following good housekeeping BMPs to minimize discharges of nitrogen and phosphorous:

- Fertilizers will be used at the application rates called for in the specifications for the project and the manufacturer's specifications.
- Apply at the appropriate time of year for your location, and preferably timed to coincide as closely as possible to the period of maximum vegetation uptake and growth.
- Avoid applying before heavy rains that could cause excess nutrients to be discharged.
- Never apply to frozen ground.
- Never apply to stormwater conveyance channels with flowing water.
- Follow all other federal, state, tribal, and local requirements regarding fertilizer
- application.
- Once applied, Fertilizers will be worked into the soil to minimize wash off from irrigation and stormwater.
- Fertilizers will be stored under cover.
- The contents of partially used fertilizer bags will be transferred to re-sealable, watertight containers clearly labeled with their contents.

5.8 Other Pollution Prevention Practices

SECTION 6: INSPECTION AND CORRECTIVE ACTION

6.1 Inspection Personnel and Procedures

Personnel Responsible for Inspections

NOT YET DETERMINED

Inspection Schedule

Specific Inspection Frequency

- All area-drain, catch basins, drain manholes and other structures shall be inspected before and after construction. The condition of the structures shall be recorded.
- All stormwater control devices are to be inspected weekly (7 days) and within 24-hours of the occurrence of a storm even event of 0.25" depth or greater (even if the storm is still continuing.
- Litter and debris clean-up shall be performed daily.
- If a problem is observed with an erosion and sediment control (needs repair or replacement), work must be initiated immediately to fix the problem, and shall be completed by the end of the next work day. If the repair or replacement is more substantial, it shall be completed within 7 calendar days from the time of discovery. If a repair takes longer than 48-hours, the repair procedures should be documented and recorded.
- If discharge of stormwater is occurring during an inspection, the location and quality of the discharge shall be noted as well as the effectiveness of erosion and sediment controls.
- Attach a copy of the inspection report you will use for your site.
- For reduction in inspections due to frozen conditions: Approximate frozen ground dates in Boston - December 1 +/- to April 1

Inspection Report Forms

Inspection Report Forms are found in Appendix D.

6.2 Corrective Action

Personnel Responsible for Corrective Actions

To be determined

Corrective Action Forms

To be developed

6.3 Delegation of Authority

Duly Authorized Representative(s) or Position(s):

To be determined

SECTION 7: TRAINING

To be completed:

Table 7-1: Documentation for Completion of Training

SECTION 8: CERTIFICATION AND NOTIFICATION

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Name: _____ Title: _____

Signature: _____ Date: _____

MAP INFORMATION

Map Scale: 1:9,320 if printed on B size (11" × 17") sheet.

The soil surveys that comprise your AOI were mapped at 1:25,000.

Warning: Soil Map may not be valid at this scale.

Enlargement of maps beyond the scale of mapping can cause misunderstanding of the detail of mapping and accuracy of soil line placement. The maps do not show the small areas of contrasting soils that could have been shown at a more detailed scale.

Please rely on the bar scale on each map sheet for accurate map measurements.

Source of Map: Natural Resources Conservation Service
Web Soil Survey URL: http://websoilsurvey.nrcs.usda.gov
Coordinate System: UTM Zone 19N NAD83

This product is generated from the USDA-NRCS certified data as of the version date(s) listed below.

Soil Survey Area: Norfolk and Suffolk Counties, Massachusetts
Survey Area Data: Version 8, Jul 23, 2010

Date(s) aerial images were photographed: 7/7/2003; 7/25/2003

The orthophoto or other base map on which the soil lines were compiled and digitized probably differs from the background imagery displayed on these maps. As a result, some minor shifting of map unit boundaries may be evident.

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.

If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

SUBCONTRACTOR CERTIFICATION
STORMWATER POLLUTION PREVENTION PLAN

Project Number: _____

Project Title: _____

Operator(s): _____

As a subcontractor, you are required to comply with the Stormwater Pollution Prevention Plan (SWPPP) for any work that you perform on-site. Any person or group who violates any condition of the SWPPP may be subject to substantial penalties or loss of contract. You are encouraged to advise each of your employees working on this project of the requirements of the SWPPP. A copy of the SWPPP is available for your review at the office trailer.

Each subcontractor engaged in activities at the construction site that could impact stormwater must be identified and sign the following certification statement:

I certify under the penalty of law that I have read and understand the terms and conditions of the SWPPP for the above designated project and agree to follow the practices described in the SWPPP.

This certification is hereby signed in reference to the above named project:

Company: _____

Address: _____

Appendix J – *Sample* Delegation of Authority Form

Delegation of Authority

I, _____ (name), hereby designate the person or specifically described position below to be a duly authorized representative for the purpose of overseeing compliance with environmental requirements, including the Construction General Permit, at the _____ construction site. The designee is authorized to sign any reports, stormwater pollution prevention plans and all other documents required by the permit.

_____ (name of person or position)
_____ (company)
_____ (address)
_____ (city, state, zip)
_____ (phone)

By signing this authorization, I confirm that I meet the requirements to make such a designation as set forth in Appendix I of EPA's Construction General Permit (CGP), and that the designee above meets the definition of a "duly authorized representative" as set forth in Appendix I.

I certify under penalty of law that this document and all attachments were prepared under my direction or supervision in accordance with a system designed to assure that qualified personnel properly gathered and evaluated the information submitted. Based on my inquiry of the person or persons who manage the system, or those persons directly responsible for gathering the information, the information submitted is, to the best of my knowledge and belief, true, accurate, and complete. I am aware that there are significant penalties for submitting false information, including the possibility of fine and imprisonment for knowing violations.

Description

Hydrologic soil groups are based on estimates of runoff potential. Soils are assigned to one of four groups according to the rate of water infiltration when the soils are not protected by vegetation, are thoroughly wet, and receive precipitation from long-duration storms.

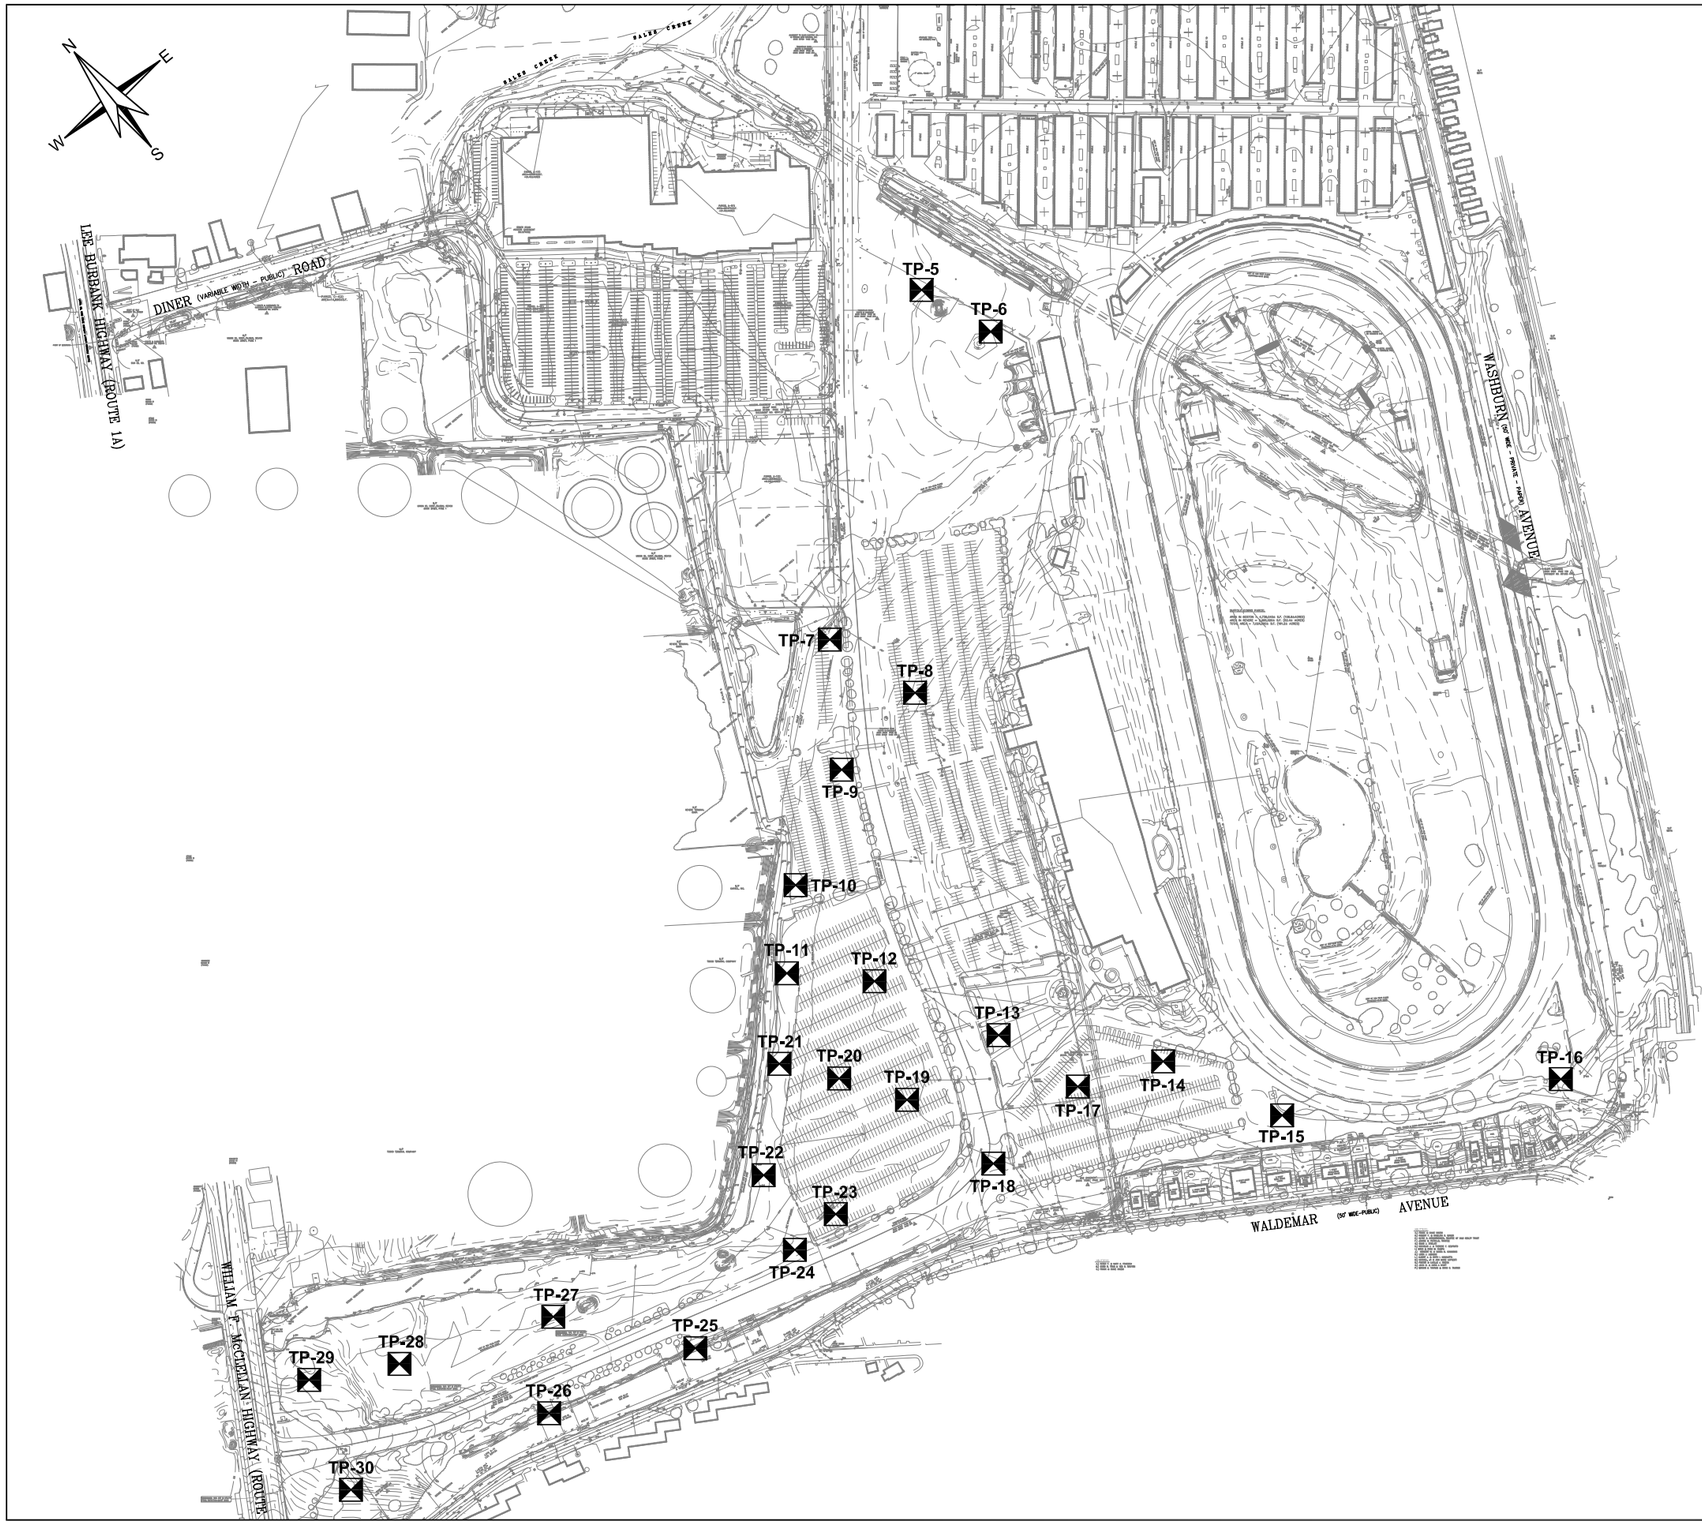
The soils in the United States are assigned to four groups (A, B, C, and D) and three dual classes (A/D, B/D, and C/D). The groups are defined as follows:

Group A. Soils having a high infiltration rate (low runoff potential) when thoroughly wet. These consist mainly of deep, well drained to excessively drained sands or gravelly sands. These soils have a high rate of water transmission.

Group B. Soils having a moderate infiltration rate when thoroughly wet. These consist chiefly of moderately deep or deep, moderately well drained or well drained soils that have moderately fine texture to moderately coarse texture. These soils have a moderate rate of water transmission.

Group C. Soils having a slow infiltration rate when thoroughly wet. These consist chiefly of soils having a layer that impedes the downward movement of water or soils of moderately fine texture or fine texture. These soils have a slow rate of water transmission.

Group D. Soils having a very slow infiltration rate (high runoff potential) when thoroughly wet. These consist chiefly of clays that have a high shrink-swell potential, soils that have a high water table, soils that have a claypan or clay layer at or near the surface, and soils that are shallow over nearly impervious material. These soils have a very slow rate of water transmission.



If a soil is assigned to a dual hydrologic group (A/D, B/D, or C/D), the first letter is for drained areas and the second is for undrained areas. Only the soils that in their natural condition are in group D are assigned to dual classes.

INTRODUCTION

Caesar's Entertainment priorities will always remain the same regardless of the nature and scope of any crisis facing us. These priorities will be the overriding imperative for all crisis-related decisions and will guide all of our actions. These priorities, in descending order are to protect the health and safety of guests and employees, maintain our reputation for fair gaming, preserve our critical assets and other corporate property, and to maintain business operations. Our consistent message will be the health and safety of our guests and employees and goodwill towards our stakeholders."

The contents of this manual are to be utilized as general guidelines and procedures for handling any emergency situation that may occur at any Caesar's owned or managed property. The primary purpose of an crisis management plan is to provide all affected individuals with a planned response to emergency situations that will protect lives; and secondarily, to protect property and resources, in the safest, most expedient manner

with minimal disruption of operations. Emergencies can arise from natural disasters or from human activities that are intentional or unintentional and have potential for creating devastating destruction.

This manual is intended to provide basic, standard guidelines and will be updated as necessary.

LOCAL GEOGRAPHY AND AREA DEMOGRAPHICS

LAKE COUNTY AREA ANALYSIS

Lake County, which is located in the northwest section of the State of Indiana, encompasses 501 square miles and is divided into eleven township units. The population is approximately 484,500 and includes a diverse minority population in the northern portion.

Lake County is located within the Valparaiso, Moraine, Calumet, Lacustrine, and the Kankakee Basin. The north-south continental divide separates natural drainage ultimately by the St. Laurence Seaway and the Gulf of Mexico.

There are several natural environmentally-sensitive areas located in the northern section, such as dune and swale prairies, wetlands, oak savannas and also some diverse and endangered ecosystems.

Lake County is diverse in its areas and includes the following incorporated areas: Hammond, Gary, Crown Point, Merrillville, Hobart, Cedar Lake, Whiting, Dyer, Highland, Lowell, Lake Station, St. John, Winfield, Griffith, Munster, Schererville and East Chicago.

The major industries include steel, petroleum, chemical products, industrial gases and numerous plastic manufacturing companies. Agriculture was once the primary industry. The communities of Hobart and Lowell are largely farming areas. Approximately 30% of Lake County is residential.

Lake County has several major thoroughfares intersected by many state roads and interstates.

Lake County has seven railroad companies encompassing both freight and passengers.

Three airports of which two are privately owned and operated serve the Lake County area. These airports are located in Hobart, Gary and Griffith.

There are eight hospitals (medical facilities) located in Lake County totaling approximately 3,900 beds, with smaller medical treatment centers surrounding the more densely populated areas.

Law enforcement entities are comprised of the Lake County Sheriff's Police, Indiana State Police the F.B.I Merrillville Office, and fifteen other police departments.

Fire and rescue services are provided by twenty-two fire departments with most of them operating with mutual aid agreements. The majority of the departments are volunteer.

Numeric's based on the 2000 census.

The berthing area where the Horseshoe Casino resides is surrounded by a two-part breakwater. The channel to open water is approximately 150 (one hundred and fifty) feet wide, and is slightly curving. The water depth is about 16 (sixteen) feet at mean lower depth.

CONCEPT OF EMERGENCY OPERATIONS

Response to emergencies or crisis situations at Horseshoe Casino Hammond will always be guided by the priorities of protecting the health and safety of guests and employees, maintaining our reputation for fair gaming, preserving our critical assets and other corporate property, and maintaining business operations. It is the General Manager's intent that all natural and manmade emergencies occurring on our premises, or affecting our business operations, be handled in a rapid and effective manner, consistent with our stated priorities and by trained and properly equipped personnel using emergency response best practices. To the extent possible, the emergency will be contained, isolated, and controlled so as to not become more widespread and further interrupt normal business operations. In all cases, we will responsibly cooperate with government authorities concerned with the emergency. In all cases, we will speak with one *properly authorized* voice to employees, guests, corporate, and the media.

Without sacrificing adequacy, our response to emergency situations will be proportional to the crisis. When appropriate, emergencies will be handled by the relevant department (e.g. Security, Facilities) with notification to management. Significant emergencies, or crisis situations that rise to the level of a corporate-wide crisis, requires activation of the Property Crisis Team (PCT). However, nothing precludes the activation of the PCT in cases where the standard of a corporate crisis is not satisfied and declared, but the GM believes such activation beneficial for incident management.

Corporate crises must be declared by proper authority at the executive-level and must generally satisfy the following criteria:

- ☐ Escalates in intensity.
- ☐ Adversely impacts shareholder value or the corporation's financial position, Causes harm to people or damage to property or the environment.
- ☐ Falls under close media or government scrutiny.
- ☐ Interferes with normal operations and consumes significant management time and/or financial resources.
- ☐ Jeopardizes the organization's reputation, products, or officers, and therefore negatively impacts its future.

The Property Crisis Team will be responsible for collaboratively coordinating the response, making decisions, and returning operations to normal as soon as feasible after an emergency. If required, the Property Crisis Team will exercise its responsibilities from a designated Command Center which will serve as the focal point for the receipt of information, making decisions, issuing orders, and maintaining control of the emergency.

The Crisis Management Plan defines the concepts, resources and methodology for a competent, practical and compliant response to an emergency incident for the Horseshoe Casino. The plan is based on criteria established by the Indiana State Gaming Commission under Indiana 68 Administrative Code (IAC) 8-12-3 and the Occupational Safety and Health Administration (OSHA) under 29 CFR 1910.38 Emergency Action Plan and 29 CFR 1910.120 – Emergency Response to Hazardous Substance Releases. The CMP identifies, implements and correlates the Horseshoe Casino and local, state and federal agencies, departments and private sector companies to allocate those resources to properly manage an emergency incident.

The Horseshoe Casino Crisis Management Plan becomes incorporated into state (Indiana), county (Lake), and local (Hammond) emergency plans. All emergency

coordinating contacts, structures, responsibilities, and agreements will be covered in this Plan.

PROPERTY CRISIS TEAM

The Property Crisis Team (PCT) is the property level team activated by the General Manager (GM) to handle both localized emergencies and situations that rise to the level of a declared corporate crisis. When operating as part of a corporate-wide response effort, the PCT is activated upon declaration of a corporate crisis by the President and CEO, or earlier if activated by the GM, and remains in operation until the crisis is satisfactorily resolved. The GM chairs the PCT and has the primary responsibility for response to the crisis at the property. The PCT physically occupies a Command Center from which response and mitigation efforts can be safely and effectively coordinated and managed. The PCT functionally mirrors the Enterprise Crisis Team and is the property's focal point for management to receive information, make decisions, issue orders, and maintain effective control of the emergency.

The PCT is charged with the following responsibilities:

(1) In a deteriorating situation, determines if a crisis is actually occurring and makes a recommendation to the GM for a corporate crisis declaration.

(2) Activates and staffs the Command Center when conditions warrant.

(3) Continually evaluates the situation and makes time sensitive, critical decisions regarding the health and safety of guests and employees including ordering an evacuation if necessary.

(4) Interacts with government authorities.

(5) Organize Guest and Employee Assistance Teams as dictated by circumstances.

(6) Coordinates with and provides all pertinent information to the corporate Enterprise Crisis Team.

(7) Assesses impact and determines required support.

(8) Interacts with the media. Only one individual member of the PCT will be designated to speak to the media on behalf of the property. That person would be the Manager of Internal Communications. If they are unavailable then the GM will designate another member of the PCT.

(9) Implements prepared contingency plans as appropriate (Medical Emergency, Bomb Threat, Power Failure, Evacuation, Fire, Civil Disturbance, Natural Disaster, etc.)

COMMAND CENTER

During emergencies, except for those only requiring medical attention, a command center may be necessary for the effective direction of operations. The Command Center will serve as a focal point for management to receive information, make decisions, issue orders, and maintain effective control of the emergency.

The senior ranking member of management will respond to this location when there is a fire alarm, bomb threat, power outage, weather emergency, earthquake, or other serious conditions affecting the welfare of guests and employees. The decision to activate the Command Center will be based on the severity of the emergency and made by General Manger or there designee.

COMMAND CENTER OPERATION

Mission:

- To utilize the various components of the Property Crisis Team (PCT) to respond to localized emergencies and situations that rise to the level of a corporate crisis.
- It is important to understand PCT members' responsibilities may change depending upon the Crisis Incident
- While all PCT members are involved in a Crisis Incident, not all PCT members' will be assigned at the Command Center

Location:

- **Primary:** Security Control/Security Supervisors Office
- **Alternate #1:** Pavilion Valet
- **Alternate #2:** Training Trailers.
- **Alternate #3:** Hammond Fire Department / Hammond Police Department Mobile Command Center.

Activation:

- The Security Manager/Highest member of Security Management Team will respond to the location of any Crisis Incident affecting the welfare of guests and employees.
- The decision to activate the Command Center will be based on the severity of the emergency and made by the General Manager or their designee.

Responsibilities:

- The below listed responsibilities are not all inclusive, but intended to give a general outline from which the On Scene Incident Commander may begin an operation.
- It is recognized that you will still possess an expertise and concern for your permanent assigned position within the Casino operation.

General Manager: On Scene Incident Commander:

- Activates and staffs the Command Center when conditions warrant.
- Evaluates the situations, assessments, and recommendations.
- Makes time sensitive, critical decisions regarding the health and safety of guests and employees.
- Orders and evacuation, if deemed necessary.
- Interacts with assisting government authorities.

Assistant General Manager/Director of Finance: Assistant to On Scene Incident Commander:

- Assumes the On Scene Incident Commander responsibilities in absence of General Manager.
- Establishes and maintains direct communications with Corporate Headquarters and the Corporate Enterprise Crisis Team.
- Assist the Manager of Internal Communication in the preparation of all media contacts and releases.
- Liaisons with the Legal Advisor.

Director of Casino Operations: Intelligence Officer

- Will serve as the Command Center's Intelligence Officer.
- Will review all incoming information, prioritize and forward to On Scene Incident Commander.
- Will disseminate the On Scene Incident Commanders decisions to the appropriate PCT member for action.
- Will ensure that arrangements have been made to provide the Command Center with Food and beverage.

Life threatening information (Demands, Deadlines, Chemical threats, etc) must be taken to On Scene Commander by person have first hand knowledge.

Director of Facility Operations: Operations Officer, CSO

- Will address any emergency needs pertaining to the physical plant.
- Provide any prints, drawings, or plans available for the property to the Command Post upon request of the On Scene Commander.
- Provide consultation to the On Scene Commander or the commanding officials of responding governmental agencies.
- Assist Coordinator of Facility/ Security Operations.
- Assists General Manager with the hand over of command operations to the appropriate responding government agencies (Police, Fire, Medical, etc).

Manager of Security: Security Operations Officer, VSO/FSO

- Implements the prepared contingency plans as appropriate (Bomb, Hostage, Fire, Etc.).

- Coordinates all Security responses.
- Liaisons with IGC.
- Assists in the implementation of the prepared contingency plans.
- Respond to precise scene of the crisis incident, when appropriate and be in charge.

Capitan on Duty or Marine Shift Supervisor: Facility Security Officer/Vessel Security Officer

- Ensure that adequate coordination of security issues takes place between the vessel and facilities; this includes the execution of a Declaration of Security when necessary.
- Ensure that security communication is readily available.
- Ensure that security systems and equipment are installed and maintained.
- Ensure that vessel access, including the embarkation of persons and their effects, is controlled.
- Ensure that restricted areas are controlled.
- Ensure that vessel stores are handled in compliance with this Security Plan.
- Ensure that restricted areas, deck areas, and areas surrounding the vessel are monitored;
- Provide the CSO and Shift Manager of Security with information while executing these duties.

Vice President of Legal Affairs: Legal Advisor

- Provide Legal advice to the On Scene Incident Commander
- Research, write and implement legal policy as needed during the crisis incident
- Maintain contact with Corporate Legal Department

Vice President of Casino Marketing: Media Representative

- Develop the appropriate public information releases to be given to the media outlets upon approval by the On Scene Incident Commander
- Provide liaison between on Scene Incident Commander and the media
- Establish pre-incident list of newspapers, radio stations and television stations
- Ensure all media releases during an on-going crisis incident have been approved by the On Scene Incident Commander, Law Enforcement authorities, and Tactical/Negotiations Coordinators.

Vice President of Compliance: Assistant to Legal Advisor

- In the absence of the Legal Advisor he will provide advice to the On Scene Incident Commander.
- Assist the Legal Advisor in researching legal issues that may arise during the Crisis Incident.

Manager of Risk: Risk Manager

- Be responsible for advising the On Scene Incident Commander and the PCT members of appropriate Risk Management issues.
- Provide advice to the Legal Advisor with issues concerning Risk Management.
- Notify OSHA of mandatory reporting requirements.

Manager of Market Technology (IT): IT Coordinator

- Provide the On Scene Incident Commander and PCT team with IT assistance.
- Pre-determine basic equipment needed in a Command Center and have it programmed and ready for an emergency.
- Assist in the establishment of extra phone/computer lines in a specific area in requested by Command Center.

Director of Table Games: Guest & Employee Assistance Coordinator

- Assure the implementation of Guest Assistance Teams as dictated by the incident.
- Coordinate with Valet the release of vehicles to guests on property.
- Assist with any unforeseen guests' problems.
- Assure the implementation of Employee Assistance Teams as dictated by the incident.
- Coordinate with the Command Center the release of employees from the property.
- Assist with any unforeseen employee problems.

Vice President of Human Resources: Human Resource Coordinator

- Address any problems directed to you by the On Scene Incident Commander concerning employee issue.
- Assist in the preparation of immediate shift changes.
- Assist in the immediate call of employees to report for duty.
- Assist in the call of employees to not to report for duty.
- Coordinate Human Resource staff's responsibility to act as a "copy center" for the Command Center.
- Will ensure a liaison person has been sent to Surveillance to communicate with the Command Center.

Director of Surveillance: Director of Surveillance

- DOES NOT respond to the Command Center.
- Will continue to coordinate all Surveillance activities.
- Will ensure that a liaison has been sent from the Command Center to your location by the Human Service Coordinator.

**** Keep in mind that in the event of an emergency and the Crisis Management Team is unavailable Security may be required to fill these roles and should use the above as a reference to ensure all tasks and duties outlined are accomplished.***

Items to be located at Command Center:

- Set of master keys (Key Watcher or Emergency Box in Security Control)
- A member of the Facilities Department with elevator keys (elevator machine room, recall switch key and elevator door emergency access key)
- Flashlights with spare batteries
- Bullhorn
- Emergency lighting/Emergency Power
- Telephones (dedicated outside phone lines or cellular)
- Battery powered portable AM/FM radios with spare batteries (National weather radio if possible)
- Emergency procedure manuals
- Floor plans of the hotel/casino (architectural, mechanical and electrical)
- Hard hats
- First aid kits
- Fire extinguisher
- Radio communications with spare batteries and charging system
- Office supplies
- This plan and updated emergency contact numbers
- Duct Tape
- Leather man Pliers

PLANNING AND TRAINING

Description of Facility

The Horseshoe Casino is a multi-story facility containing restaurants, gift shops and administrative offices to support the Casino located in the Hammond Marina, City of Hammond, and Lake County, Indiana. An attached nine-story parking garage is located next to the main building an additional seven-story parking garage is in the immediate vicinity of the building. The property footprint also contains two storage warehouse buildings and a training center located approximately a quarter of a mile from the main building. The facilities conform to all applicable codes and regulations.

EMERGENCY INCIDENT ASSUMPTIONS

The table below provides a list of potential realistic emergency incidents and the most likely time period that the incident would occur at the support facility and Casino.

Potential Incidents	Most Likely Time Period That an Incident Would Occur (Critical Time Variables)		
	Time of Day	Day of Week	Time of Year
Medical Emergency	Anytime	Anytime	All Year
Fuel Spill-Water	Anytime	Anytime	All Year
Fuel Spill-Land	Day	Anytime	All Year
Person(s) overboard	Anytime	Anytime	All Year
Fire	Anytime	Anytime	All Year
Power Outage	Anytime	Anytime	All Year
Robbery	Anytime	Anytime	All Year
Transportation Accident	Anytime	Anytime	Spring and Summer
Local operators of tug and barge equipment will be reached, when sighted, by VHF radio and tracked by radar to avoid close aboard passing situations. See attached charts.	Day	Weekends and Holidays	Spring and Summer
Inclement weather: Thunderstorms Tornado/Wind Storm Flooding Earthquakes Winter Storms	Spring and Summer	Any Day	All Year

Terrorism: Biological Bomb (Nuclear Attack Threat) Sabotage Hostage	Any Time	Any Day	All Year

FACILITIES AND VESSELS IN OPERATION AREA

Facilities near the dock or on the excursion route that might be a hazard to the operation of the Horseshoe Casino if an incident were to occur within the boundaries of the identified facilities are listed in the table below.

Hazardous Facilities in Operation Area	Description of Potential Hazards Affecting the Casino
Steel, gas, petroleum, chemical products and plastic manufacturing.	Release of chemical plume during a fire or explosion. Radiological Accidents
Recreational boats and commercial shipping. Land transportation	Incidents involving these facilities and vessels may block emergency routes to the Casino

INCIDENT TYPES

Incident	Criteria	Response
Level I Potential Emergency Incident	☐ An incident or threat of an incident ☐ Confined to small area. ☐ No immediate threat to life or property. ☐ Can be controlled by Horseshoe Casino personnel. ☐ Evacuation may or may not be required.	Most likely handled by Horseshoe Casino trained personnel
Level II Limited Emergency Incident	☐ An actual incident ☐ A potential hazard or large area. ☐ May pose a threat to life and/or property. ☐ May require limited evacuation.	May require outside emergency services and/or mutual aid response.
Level III Full Emergency Incident	☐ An actual incident. ☐ Presents a severe hazard or a large area. ☐ Poses a threat to life and/or property. ☐ Will require evacuation.	Will require outside emergency services and/or mutual aid response.

Organizations and agencies that provide initial response or support are listed in the Table Below. Each may have their own standard operating procedures that will govern their actions for response and action.

Organizations and Agencies That Provide Response Support

Organization or Agency	Primary Responsibility	Support Roles
☐ Caesar's Entertainment, Inc.	☐ Policy and plans for emergency incident management. ☐ Direction and control of the Emergency Operations Center. ☐ Coordination of communications ☐ Plan and resource management	☐ Warnings, public information education.
☐ United States Coast Guard	☐ Waterway enforcement and management	☐ Warnings, communications and information ☐ Inter-agency coordination
☐ Law Enforcement	☐ Law, order and protection ☐ Warning and communications ☐ Traffic control	☐ Evacuation ☐ Search & Rescue ☐ Disaster response
☐ Fire Fighting/Emergency Medical Services	☐ Fire ☐ Emergency Medical - on scene ☐ Hazardous Materials ☐ Evacuation	☐ Cause determination ☐ Warnings and communications ☐ Damage control and assessment
☐ Medical and Human Services	☐ Medical triage and emergency medical ☐ Disaster and mass casualty care and management ☐ Shelter, food, etc.	☐ Human Services ☐ Relocation and public services
☐ Public Works and Services	☐ Utilities, streets and sanitation clearance and restoration	☐ Utilities, streets and sanitation clearance and restoration
☐ Indiana State Emergency Management	☐ Damage assessment ☐ Law enforcement ☐ Resources	☐ Support for local level emergency operations by request
☐ Federal Emergency Management/Disaster Assistance	☐ Emergency Protective Measures	☐ Support of local and state operations

LAKE COUNTY EMERGENCY OPERATIONS CENTER

The table below provides a description of the procedures and support roles for the activation and operation of the Lake County Emergency Operations Center (EOC). The authority person activating the EOC will establish an Incident Command Unit (ICU) at the emergency incident site and appoint an ICU Commander.

Procedures and Support Roles for the Activation and Operation of the Lake County Emergency Operations Center

Purpose	Location	**Activation and Operations Authority**	Organization and Responsibilities
To provide a centralized direction and control together with coordination logistical, administrative and operational support for an emergency incident. The EOC is responsible and has authority for direction and control for all emergency incidents except those that occur in and/or on the pavilion or parking structure of the Horseshoe Casino.	Primary: 2900 W. 93rd Ave Crown Point, IN 219-775-3549 Alternate: May be selected by EOC personnel contingent upon the specific requirements of the incident. Activation, control and authority will be transferred to the Executive Group.	Activation: The President of the Lake County Board of Commissioners (or designee), Lake County Emergency Management Director or Sheriff may activate the Primary or Alternate EOC Operation: The Lake County Emergency Management Director will coordinate all operations and any notifications for EOC operations	Executive Group: Policy development, coordination of EOC activities and overall management of the emergency response. Disaster Analysis: Assessment, determination and documentation of damage and ramification. Operations: Coordination and implementing personnel assigned by title to an emergency incident. Resource: Coordination, deployment and identifying the necessary resources for management of an emergency incident.

MUTUAL AID AGREEMENTS

Land-based mutual aid is available from the following agencies listed below:

- ☐ Lake County Emergency Management Agency
- ☐ Lake County Fire Chief's Association
- ☐ American Red Cross of Northwest Indiana

FIRE AND RESCUE

The Horseshoe Casino has implemented the fire prevention and response capabilities listed in the table below.

Fire Prevention Equipment

Equipment	Personnel	Procedures
The Horseshoe Casino has engineered, installed, maintained, tested and inspected all equipment with compliance to local, state and Federal requirements and fire safety codes.	The Horseshoe Casino has personnel that are trained for an emergency incident, from Security, Facilities/Marine and Support Services.	Horseshoe Casino has developed a Fire and Alarm Plan.

EVACUATION

The Horseshoe Casino has developed Evacuation Plans. The Horseshoe Casino is designed and conforms to all local, State and Federal requirements for emergency lighting, exits signs and means of egress. Security personnel are trained in evacuation procedures. Written evacuation procedures are part of this Crisis Management Plan.

COMMUNICATION AND IMPLEMENTATION

Horseshoe Casino Communications Systems

- The Horseshoe Casino is equipped with a public address system, paging system and personnel are equipped with cellular and/or portable radio communications.
- All Property Crisis Team members and Horseshoe Casino officials will communicate via the system designated by the On-Scene Incident Commander or his designee and Incident Command.
- Response personnel and the EOC will communicate in accordance with the Lake County EOC procedures. Coordination of all radio communications will be done through the EOC for a common frequency.

Warnings or Announcements

- Any emergency warning may be made over the public address system at the direction of the On-Scene Incident Commander or his designee.

On-Scene Commander

- The highest-ranking Security Supervisor/Manager will serve as the On-Scene Commander in the event that a designate On-Scene Incident Commander is unavailable (GM/AGM).
- The On-Scene Commander of the Horseshoe Casino will coordinate with the Response Agency's Incident Commander and remain in control of the Horseshoe Casino response.

Lake County EOC

- Notification for activation for the EOC will be in accordance with the Lake County Emergency Notification Roster.

TRAINING

Horseshoe Casino will conduct initial and continuing orientation training for all affected personnel in the policies and procedures to provide for the safety and emergency response to effectively manage an incident. Training programs are listed in Table B-1.

Table B-1
Health and Safety Training Programs

Training Programs	Initial Orientation	Annual Refresher
Emergency Evacuation	Upon Hire	X
Fire Emergencies	Upon Hire	X
Fire Extinguishers Use	Upon Hire	X
Hazardous Material Release	Upon Hire	X
Hazard Communication	Upon Hire	X
Bloodborne Pathogens	Upon Hire	X

THE SCHEDULE OF TRAINING WILL BE UPDATED ANNUALLY AND A COPY WILL BE SENT TO THE EXECUTIVE DIRECTOR OF THE INDIANA GAMING COMMISSION BY JANUARY 31 OF EACH YEAR.

In addition to the training listed in Table B-1, Horseshoe Casino will provide its Security personnel training as outlined in the Security Operations Manual

Horseshoe Casino will conduct initial and continuing orientation training for all effected local emergency response and medical personnel.

TESTING, MAINTAINING AND REVISING THE CRISIS MANAGEMENT PLAN

The CMP will be maintained through documented amendments identified in testing or updates, or from any follow-up investigative documentation. The test will be reviewed for compliance with the existing policies and procedures to determine their effect and suitability and make the necessary revisions. The frequency of testing of the CMP is provided in the table below.

Frequency of Crisis Management Plan Testing

Drills/Test	Daily	Weekly	Monthly	Quarterly	Semi-Annual (ABS)	Annual
Crisis Management Plan				X	X	X
Public Address System/Communications Systems			X		X	
Medical Emergency	X				X	
Emergency Equipment Inspections		X	X		X	X
Emergency Evacuation				X	X	
Power Failure				X	X	
Selective Contingency Plans				X		

THE SCHEDULE OF TRAINING WILL BE UPDATED ANNUALLY AND A COPY WILL BE SENT TO THE EXECUTIVE DIRECTOR OF THE INDIANA GAMING COMMISSION EACH YEAR.

Training for Local Emergency Response and Medical Personnel

Training Programs	Initial Orientation	Annual Refresher
Overview of the Crisis Management Plan	Upon Hire	TBA

The Manager of Security is responsible for preparing or having prepared the documents listed above.

Required Submittals

Program Area	Agency	Due Date
☐ CMP Training Schedule for the current year.	☐ Executive Director of the Indiana Gaming Commission	☐ January 31, of each year.
☐ CMP Practice schedule for the current year.	☐ Executive Director of the Indiana Gaming Commission	☐ January 31, of each year.
☐ Incident Information Summary	☐ Only need to maintain on file.	☐ 10 days following an incident
☐ Amendments to the CMP	☐ Executive Director of the Indiana Gaming Commission	☐ 60 days prior to their implementation.

RESPONSE EVALUATIONS

At the conclusion of the annual CMP exercises, Horseshoe Casino will evaluate and review the effectiveness of the CMP and will contact the following personnel and response agencies for their input and suggestions:

- ☐ Director of Facility Operations
  Manager of Security
- ☐ Shift Manager of Security
- ☐ City of Hammond Police and Fire
- ☐ Lake County Sheriff's Police
- ☐ Mutual Aid Responders
- ☐ Lake County Emergency Management Personnel
- ☐ Marine Operations

Any changes to the written CMP will be made as necessary based on factors learned during the exercise and documented on Amendments to the Plan.

RESPONSE EVALUATIONS

At the conclusion of the actual CMP incident, Horseshoe Casino will evaluate and review the effectiveness of the CMP and will contact the following personnel and response agencies for their input and suggestions:

- ☐ Director of Facility Operations
  Manager of Security
- ☐ Shift Manager of Security
- ☐ City of Hammond Police and Fire
- ☐ Hammond Emergency Management Personnel
- ☐ Marine Operations
- ☐ Other Agencies as Directed

INCIDENT INFORMATION SUMMARY

Within 10 days following an incident the Horseshoe Casino will complete a Situation Report, and maintain a copy on file. Depending on the nature of the incident, other relative Horseshoe Casino forms will be completed (e.g. OSHA Injury and Illness Logs, Workers' Compensation forms, etc.) and will be available for review.

MEDICAL STAFFING

Horseshoe Casino has a full-time on-site EMT (24 hours a day/7 days a week) and a number of CPR/First Aid trained employees to assist in medical emergencies in addition to local fire and ambulance series. There is an on-site Medial Facility equipped with first aid and medical supplies for use until outside medical personnel arrive.

EVACUATION PLANS

The Horseshoe Casino has developed an Evacuation Action Plan (Specifics listed in the Emergency Response Plan document are attached) As part of this Crisis Management Plan, facility diagrams with the following information are posted at various locations throughout the land based facility and Casino:

Primary and alternative evacuation routes
Staging Areas
Fire Alarm Pull Stations
Tornado/Severe Weather Shelters
Fire Protection Equipment (e.g. Fire Extinguishers)
Fire and Police emergency Phone Numbers

EMERGENCY RESPONSE PLAN

INSTRUCTIONS

1. Entire crew shall familiarize themselves with the location and duties of their emergency stations immediately upon reporting on board.
2. Emergency Squad upon receipt of alarm will muster at the Emergency Equipment Locker, establish communications with the bridge and proceed to the scene to make an initial assessment of situation.
3. Person discovering FIRE shall immediately notify bridge.
4. Upon hearing the signal "MAN OVERBOARD" throw life rings overboard, stop engines, and post lookouts. Rescue Boat crew will immediately prepare the boat for launching.
5. Non-boat operations department crew will help calm and direct patrons to egress routes, and clear passageways as instructed by the Captain.

	FIRE	MAN OVERBOARD	VESSEL EVACUATION	GENERAL EMERGENCY
SIGNAL	Continuous ringing of the ship's whistle and general alarm for 10 or more seconds followed by a verbal announcement.	Hail and pass the word "MAN OVERBOARD" to the bridge. 3 short blasts followed by 1 long blast on ship's whistle and general alarm if to starboard, 3 shorts and 2 long if to port.	More than 6 short blasts and 1 long blast on ship's whistle and general alarm.	Continuous ringing of the ship's whistle and general alarm for 10 or more seconds followed by a verbal announcement.
POSITION	RESPONSIBILITIES	RESPONSIBILITIES	RESPONSIBILITIES	RESPONSIBILITIES
Captain/ Supervisor	In command of all operations, establish communications with emergency squad, sound alarm, start fire pumps, close all fire doors, secure ventilation, alert Coast Guard and shipping in area.	In command of all operations, sound alarm, alert Coast Guard and all shipping in area.	In command of all operations, sound alarm, alert Coast Guard and all shipping in area.	In command of all operations, establish communications with damage control squads, sound alarm, start fire pumps, close all fire doors, secure ventilation, alert Coast Guard and shipping in area.
SUPERVISOR/ON-SCENE LEADER	At scene in charge, lead Emergency Squad.	At scene in charge, supervise the launching of Rescue Boat. Control traffic.	Direct crewmembers to abandon ship stations, evacuate event level 4 theater area with PSO assigned, oversee sweep of vessel, report status to Captain.	Damage Control Squad #1 Leader, Bow - Frames 0-60, Modules A, B, C.
Marine Operations LEAD TECHNICIAN #1	Nozzle man with fire team #1, Don SCBA and fire fighting suit.	Coxswain Rescue Boat.	Evacuate casino level 2 - area 1 and high limit area with PSO assigned. Direct patrons to proper egress routes. Report to Captain when casino level 2 - area 1and high limit area is clear.	Damage Control Squad #2 Leader, Bow - Frames 60-92, Modules A, B, C.
Marine Operations LEAD TECHNICIAN #2	Nozzle man with fire team #2, Don SCBA and fire fighting suit.	Bow-hook in Rescue Boat.	Evacuate event level 4 promenade and buffet areas with PSO assigned. Direct patrons to proper egress routes. Report to Captain when event level 4 promenade and buffet areas are clear.	Damage Control Squad #3 Leader, Bow - Frames 92-137, Modules A, B, C.
Deckhand # 1	Hose man Team #1, Don SCBA and fire fighting suit.	Assist Launching Rescue Boat.	Evacuate mezzanine level 3 with PSO assigned. Direct patrons to proper egress routes. Report to Captain when mezzanine level 3 is clear.	Damage Control Squad #4, Stern - Frames 137-92, Modules D, E, F.
Deckhand # 2	Hose man team #2, Don SCBA and fire fighting suit.	Assist Launching Rescue Boat.	Evacuate theater loggia level 5 with PSO assigned. Direct patrons to proper egress routes. Report to Captain when theater loggia level 5 is clear. Evacuate casino level 2 - area 2 with PSO assigned. Direct patrons to proper egress routes. Report to Captain when casino level 2 - area 2 is clear.	Damage Control Squad #1, Bow - Frames 0-60, Modules A, B, C.
Deckhand #3	Valve man Team #1, Rig hose.	Assist paramedic.	Evacuate theater balcony level 6 & 7 with PSO assigned. Direct patrons to proper egress routes. Report to Captain when theater balcony level 6 & 7 is clear. Evacuate casino level 2 - area 3 with PSO assigned. Direct patrons to proper egress routes. Report to Captain when casino level 2 - area 3 is clear.	Damage Control Squad #6, Stern - Frames 60-36, Modules D, E, F.
CHIEF ENGINEER	In charge of engine room.	In charge of engine room.	In charge of engine room, start pumps as directed. Evacuate hold deck stern frames 60-0. Direct employees to proper egress routes. Close watertight doors if directed. Report to Captain when hold deck stern frames 60-0 is clear.	In charge of engine room, start pumps as directed, Damage Control Squad #7 Leader, Stern - Frames 60-0, Modules D, E, F.
FIRST ASST. ENGINEER	Secure power and ventilation as directed.	Assist as directed.	Evacuate hold deck bow frames 0-60. Direct employees to proper egress routes. Close watertight doors if directed. Report to Captain when hold deck bow frames 0-60 is clear.	Damage Control Squad #7, Stern - Frames 60-0, Modules D, E, F.
SECOND ASST. ENG./OILER	Deploy with Emergency Squad; bring CO2 extinguisher & spare hose. Boundary cool.	Assist as directed.	Evacuate hold deck bow frames 60-92. Direct employees to proper egress routes. Close watertight doors if directed. Report to Captain when hold deck bow frames 60-92 is clear.	Damage Control Squad #6 Leader, Stern - Frames 60-36, Modules D, E, F.
Engine Utility #1	Valve man Team #2, Rig hose.	Assist as directed.	Evacuate hold deck bow frames 92-137. Direct employees to proper egress routes. Close watertight doors if directed. Report to Captain when hold deck bow frames 92-137 is clear.	Damage Control Squad #4 Leader, Stern - Frames 137-92, Modules D, E, F.
Engine Utility #2	Deploy with Emergency Squad; bring CO2 extinguisher & spare hose. Boundary cool.	Assist as directed.	Evacuate hold deck stern frames 137-92. Direct employees to proper egress routes. Close watertight doors if directed. Report to Captain when hold deck stern frames 137-92 is clear.	Damage Control Squad #5 Leader, Stern - Frames 92-60, Modules D, E, F.
SECURITY MANAGER/ SECURITY SUPERVISOR #1	Report to the bridge. Assist Captain with communications.	Report to the bridge. Assist Captain with communications.	Evacuate theater balcony level 6 & 7 with boat operations crew assigned. Crowd control. Evacuate casino level 2 - area 3 (evacuate zones A, B, C, D, E, F, bathrooms and service bars adjacent to zones D & P, and table games between zones A & P) with boat operations crew assigned. Crowd control.	Damage Control Squad #3, Bow - Frames 92-137, Modules A, B, C.
SECURITY SUPERVISOR #2	Deploy with Emergency Squad; bring CO2 extinguisher & spare hose. Boundary cool.	At scene, assist Emergency Squad, coordinate medical assistance.	Evacuate theater balcony level 6 & 7 with boat operations crew assigned. Crowd control. Evacuate casino level 2 - area 3 (evacuate zones A, B, C, D, E, F, bathrooms and service bars adjacent to zones D & P, and table games between zones A & P) with boat operations crew assigned. Crowd control.	Damage Control Squad #2, Bow - Frames 60-92, Modules A, B, C.
PATRON SAFETY OFFICER# 1	Assist patrons.	Assist patrons.	Evacuate theater loggia level 5 with boat operations crew assigned. Crowd control.	Damage Control Squad #5, Stern - Frames 92-60, Modules D, E, F.
PATRON SAFETY OFFICER# 2	Assist patrons.	Assist patrons.	Evacuate theater loggia level 5 with boat operations crew assigned. Crowd control.	Assist as directed.
PATRON SAFETY OFFICER# 3	Assist patrons.	Assist patrons.	Evacuate event level 4 promenade and buffet areas with boat operations crew assigned. Crowd control.	Assist as directed.
PATRON SAFETY OFFICER# 4	Assist patrons.	Assist patrons.	Evacuate event level 4 promenade and buffet areas with boat operations crew assigned. Crowd control.	Assist as directed.
PATRON SAFETY OFFICER# 5	Assist patrons.	Assist patrons.	Evacuate event level 4 theater area with boat operations crew assigned. Crowd control	Assist as directed.
PATRON SAFETY OFFICER# 6	Assist patrons.	Assist patrons.	Evacuate event level 4 theater area with boat operations crew assigned. Crowd control	Assist as directed.
PATRON SAFETY OFFICER# 7	Assist patrons.	Assist patrons.	Evacuate mezzanine level 3 with boat operations crew assigned. Crowd control	Assist as directed.
PATRON SAFETY OFFICER# 8	Assist patrons.	Assist patrons.	Evacuate casino level 2 - area 1 (evacuate zones J, K, L, M, table games area directly in front of main cage, total rewards, service bar and bathrooms adjacent to Zone K) with boat operations crew assigned. Crowd control.	Assist as directed.
PATRON SAFETY OFFICER# 9	Assist patrons.	Assist patrons.	Evacuate casino level 2 - area 1 (evacuate zones J, K, L, M, table games area directly in front of main cage, total rewards, service bar and bathrooms adjacent to Zone K) with boat operations crew assigned. Crowd control.	Assist as directed.
PATRON SAFETY OFFICER# 10	Assist patrons.	Assist patrons.	Evacuate casino level 2 - area 2 (Evacuate zones F, G, H, I, N, O, and table games area between zones I & N.) with boat operations crew assigned. Crowd control.	Assist as directed.
PATRON SAFETY OFFICER# 11	Assist patrons.	Assist patrons.	Evacuate casino level 2 - area 2 (Evacuate zones F, G, H, I, N, O, and table games area between zones I & N.) with boat operations crew assigned. Crowd control.	Assist as directed.
PATRON SAFETY OFFICER# 12	Assist patrons.	Assist patrons.	Evacuate casino level 2 - high limit area (evacuate Asian Gaming, HL Tables, HL Slots, Poker Room, 7 Stars Lounge, and all BOH areas from the port mid-ship accelator to the 7 Stars Lounge) with boat operations crew assigned. Crowd control.	Assist as directed.
PATRON SAFETY OFFICER# 13	Assist patrons.	Assist patrons.	Evacuate casino level 2 - high limit area (evacuate Asian Gaming, HL Tables, HL Slots, Poker Room, 7 Stars Lounge, and all BOH areas from the port mid-ship accelator to the 7 Stars Lounge) with boat operations crew assigned. Crowd control.	Assist as directed.

SECURITY CONTROL

The duties and responsibilities of Security are listed in the Job Description in Human Resources. Additional duties are listed in the various Action Plans provided as part of this Crisis Management Plan.

When outside law enforcement is required, Security Control will, under the direction of an On-Scene Commander, contact the appropriate agency (e.g. Hammond Police, FBI, etc.)

HUMAN SERVICES

Horseshoe Casino has contacted the agencies listed below to arrange for the emergency human services should they be necessary.

Human Services Provided	Agency	Telephone No.
Food	American Red Cross	219 756-5360
Shelter	American Red Cross	219 756-5360
Clothing	American Red Cross	219 756-5360
Continuity Medial Care	American Red Cross	219 756-5360
Crisis Counseling	American Red Cross	219 756-5360
Shelter/Alt Transportation	City of Hammond	219 853-6393

MANAGER OF RISK CONTROL

The Manager of Risk Control is responsible for advising the On-Scene Incident Commander and the Personnel Coordinators as listed in the Command Center Instructions some additional duties in execution and maintenance of this plan include but are not limited to:

- Maintaining a liaison with the On-Scene Incident Commander.
- Coordinating and documenting any necessary training of employees, managers and supervisors.
- Assisting the On-Scene Incident Commander in developing, executing and documenting, on a periodic basis, tests and exercises of various components of the CMP.
- Notifying OSHA within 8 hours of an employee death or hospitalization of three or more employees.
- Completing Indiana OSHA Injury and Illness Logs and necessary Workers Compensation forms.
- Notifying the appropriate environmental agencies of any Reportable Quantity releases by telephone initially and with a follow-up report in writing.
- Coordinating of any remediation activities.
- Periodically updating the Plan as needed.

DIRECTOR OF FACILITY OPERATIONS

The Director of Facilities is responsible for instructions pertaining to the facility listed in the Command Center, some additional duties in execution and maintenance of this plan include but are not limited to:

- Advising of the lockout, switching and use of electrical circuits.
- Contacting local utilities regarding power and water during and after the emergency.
- Making available any prints showing company property, utility services and sewer systems.
- Shutting off utilities if necessary and having appropriate tool(s) readily available.
- Ensuring the protection of sanitary and storm drains to the extent possible in the event of a chemical spill in cooperation with the Incident Commander and the First Responders, Operations Level.
- Ensuring the proper maintenance of all facility emergency equipment and systems including the fire alarm, sprinkler systems, fire extinguishers, emergency lighting, exit signs and security systems.
- The maintenance employee controlling the valves will be trained in knowing how to test the valves to ensure that they are open.
- Conducting a yearly check of the sprinkler valves (and fire alarm systems).
- Knowing the location of all of the sprinkler valves outside the facility.
- Testing the emergency lighting units and inspecting the fire extinguishers on a monthly basis and maintaining written records of testing.

DEPARTMENT MANAGERS/SUPERVISORS

Department Managers/Supervisors have the responsibility for sweeping their designated areas and taking a head count of the employee assembly area during an emergency evacuation along with ensuring members of their department attend any safety related training. Some additional duties in execution and maintenance of this plan include but are not limited to:

- Identifying employees in their assigned areas who will require special assistance in evacuating the building and making advanced plans to ensure their safe evacuation.
- Reporting missing employees to Incident Command and/or fire department.
- Patrolling evacuation assembly areas and maintain order.
- Conveying the need for alternative shelter to Incident Command when weather prohibits or the emergency situation dictates that employees cannot stay in the assembly points for long periods.
- Conveying any approved alternative assembly points communicated from the Command Center to the employees in your designated group.
- Ensuring that all employees handle chemicals safely according to facility safety procedures.

- Reviewing with their employee the Material Safety Data Sheet for all new chemicals they will be using.
- Ensuring compliance with the Hazard Communication Procedures.
- Ensuring that personal protective equipment is available and used.

FIRE EXTINGUISHER TRAINED PERSONNEL

Under no circumstances is an employee to extinguish a fire if it would be dangerous to do so. If a fire cannot be readily extinguished, do not continue to try to extinguish it. In this case, activate the nearest fire alarm and evacuate the building. Some additional duties in execution and maintenance of this plan include but are not limited to:

- Participating in annual multipurpose dry chemical fire extinguisher training.
- Using a multipurpose dry chemical fire extinguisher to extinguish small or minor fires class A, B or C fires.
- After extinguishing a fire, immediately notify Security Control.
- Attempting to use only one fire extinguisher before evacuating the area.
- Reporting the location of the fire to their Manager/Supervisor at the assembly point.

MEDICAL COORDINATION TRIAGE OFFICER

The highest-ranking EMT and/or paramedic will maintain communication with responding personnel and act as the triage officer.

CERTIFIED CPR/FIRST AID RESPONDERS

The Certified CPR/First Aid Responders are a group of employees certified to provide CPR and first aid assistance. Some additional duties in execution and maintenance of this plan include but are not limited to:

- Participate in annual CPR/First Aid re-certification training.
- Participate in Horseshoe Casino's Bloodborne Pathogens Training and wear approved personal protective equipment to protect against exposure to bloodborne pathogens.
- Rendering first responder care to any injured or ill employee to the extent that their training allows.
- Moving the injured employee only if he/she is in danger and it is safe for both parties to do so.
- Contacting medical assistance immediately in the event of a life-threatening emergency.
- Following the specific procedures detailed in the Medical Emergencies Action Plan.

ALL FACILITY PERSONNEL

Some additional duties in execution and maintenance of this plan include but are not limited to:

- Know how to implement the Crisis Management Plan.
- Be familiar with the hazards of the chemical you use and have read the MSDS for each new chemical you use.
- Immediately report emergencies to Security Control
- Activate the fire alarm in the event of a fire or explosion.
- Evacuate immediately when the fire alarm sounds using the nearest exit.
- Assist guests in evacuations.
- Remain calm and follow instructions in the event of an emergency.
- Gather outside the facility in the assembly area and take direction from your Manager/Supervisor.
- Remember what, if any, toxic or hazardous materials you may have left open before an evacuation and report this to the Manager/Supervisor if you suspect this may present a danger upon returning to the building.
- Be familiar with the CMP, location of all emergency exits fire extinguisher, telephones, First Aid stations, and fire alarm pull boxes near your work area.

ANNEX 1:

EMERGENCY NOTIFICATION PROCEDURE/LIST

The methods to be used for interdepartmental communication shall be:

- By cellular phone to “911" and interdepartmental.
- NEXTEL/Sprint Cellular and Direct talk.
- VHF radio
- Aboard Horseshoe Casino, dial “3700" on any in house phone or 219-746-1349 to reach Marine Operations.

24-Hour Hotline Number “911" will be displayed prominently in the Bridge by the Marine Operations Duty Phone.

See Emergency Contact List for other numbers.

ANNEX 2: **EVACUATION PROCEDURES**

(Applicable to all contingencies)

DEFINITIONS AND GENERAL EVACUATION PROCEDURES

Types of Evacuations	Definition
Vertical	The movement of personnel up, down or into emergency exits or stairwells.
Horizontal (Isolation)	The movement of personnel across a floor for safe refuge.
Partial	The movement of a limited number of people that may be immediately endangered or the immediate floors above or below the incident.
Total	The total movement of all personnel from the facility to the staging area.

The General Manager, the General Managers designee or an authorized Public Safety Official are the only persons allowed to completely close this facility. Decisions to evacuate can be made by the highest ranking Security Person on property at the time of the emergency. Decisions to evacuate the vessel can also be made by the Captain of the vessel.

The General Manager, Manager of Security or the Incident Commander and/or Vessel Captain is/are the only one(s) authorized to commence any evacuation procedure unless such an emergency exists that time will not permit the notification.

Prior to making the decision, the following items should be considered:

- Is there a confirmed fire or heavy smoke condition?
- Does the emergency pose any threat, whatsoever, to guests and/or employees?
- Has the emergency condition ended?
- Is there extensive damage that could create risks to evacuating guests and/or employees?

During an evacuation all employees will be directed to Wihala County Beach, The Marina Overflow Parking Lot or other area designated by Security.

Emergency announcements over Public Address or Bull Horn systems:

- The message should be concise and provide all the needed information.
- The instructions should be spoken clearly and slowly so that people can understand the message.
- Persons who make the various announcements during emergencies should receive sufficient training to operate the voice communications equipment.
- Employees shall practice making live announcements at periodic times throughout the year to ensure their messages are loud enough, clearly heard, and understood.

- Content of messages should be reviewed with local fire authorities before adoption as a standard procedure.

Evacuation Message

- "May I have your attention please? May I have your attention please? The casino and Fire Department have determined that for your safety you should move towards the nearest stairway or exit and evacuate your area. Do not use the elevators. Please move toward the nearest stairway or exit and evacuate the hotel/casino. All guests should assemble in (designated evacuation area).
- Message should be repeated three times or until no longer safe to do so or the building/area is clear.

When the decision to evacuate the premises has been made by the Fire Department, or by Senior Management, all employees on duty at the time will assist in an orderly evacuation.

When an evacuation has been ordered if time permits each employee will be responsible for the following:

☐ Shut off all electrical equipment and disconnect power supply cords, (except in bomb threat evacuations. In this case, do not change settings on any electrical equipment, shut off lights or computers, adjust thermostats, etc.)
☐ Clear work area, placing all paperwork inside desk drawers or cabinets
☐ Close all drawers and file cabinets.
☐ Close all windows and doors.
☐ Supervisors should gather shift schedule and immediately proceed to the assembly area.
☐ Leave the building by the closest safe exit while assisting guests having difficulty in the evacuation.
☐ Go to the assigned assembly area and report to your department manager or supervisor.. DO NOT GO HOME.
☐ Employees are NOT to go to their vehicles or leave the property

Supervisors

☐ Will function as evacuation leaders, checking rooms and other enclosed spaces in their assigned areas for employees or guests who may be trapped or otherwise unable to evacuate the area.
☐ Will respond to the evacuation area.
☐ Will utilize on-duty roster to account for all employees.
☐ Will report to the Command Center the results of the employee count.
☐ Will coordinate the dissemination of information to employees concerning the status of the situation.

Food & Beverage

Restaurants

☐ Place all monies in register – close and lock drawer.
☐ Advise patrons: "At this time we are closed for business and request all persons to leave this area." Give directions to nearest safe exit.
☐ Exit building and go to assigned assembly area.

Kitchens
☐ Turn off all stoves and/or electrical equipment.
☐ If safe to do so, check all walk-in boxes, freezers, bakery and butcher shop for personnel and secure before leaving.
☐ Remove all carts from hallways and exits.
☐ Exit building and go to assigned assembly area.

Bars
☐ Advise patron: "At this time we are closed for business and request all persons to leave this area." Give directions to nearest safe exit.
☐ Place all monies in register – close and lock drawer.
☐ Exit building and go to assigned assembly area.

Room Service (If applicable)
☐ Push all carts and other equipment into rooms and out of hallways/pathways that may prevent safe and prompt evacuation.
☐ Proceed to nearest safe exit and assist guests to an assembly area.

Accounting Department

Main Cashier / Employee Cage
☐ Secure all monies and important records and/or documents in the safe.
☐ Inform patrons that chips may be turned in later and direct them to the nearest safe exit.
☐ Exit building and go to assigned assembly area.

Soft Count
☐ Secure all monies and important records / documents in metal boxes and place in drop box cabinets.
☐ Notify Surveillance that personnel are leaving the Soft Count Room
☐ Exit building and go to assigned assembly area.

Gaming Personnel

Casino Pit
☐ Inform patrons that "all bets are off" and chips and money can be exchanged later. Direct them to the nearest safe exit.
☐ Cap chip racks and lock down.
☐ Take issued markers to main cage supervisor if time permits, and if it is safe to do so.

Poker Room

- ☐ Advise patrons that "all bets are off" and that chips or monies may be exchanged later. Give directions to nearest safe exit.
- ☐ Cap chip racks and lock down.
- ☐ Take issued markers to Main Cage to be placed in safe if time permits and it is safe to do so.
- ☐ Place paper money from the Poker Cashier Bank in the Funds Exchange bag and take to the Main Cage if time permits and it is safe to do so.
- ☐ Exit building and go to assigned assembly area.

Slot Area

- ☐ Advise guests: "We are closed for business and request all persons to leave this area." Give directions to nearest safe exit.
- ☐ Secure all monies and important records in drawers and lock.
- ☐ Lock booth doors keeping keys in possession.
- ☐ Exit building and go to assigned assembly area.
- ☐ Collect all other keys from employees in assembly area.

Surveillance

- ☐ Secure all important records/documents in cabinets and drawers.
- ☐ Keep cameras and recorders operational
- ☐ Position PTZ cameras for maximum views of the casino pit and money sensitive areas.
- ☐ Take portable radios/batteries
- ☐ Exit building and go to assigned assembly area.

Hotel (If applicable)

Front Desk

- ☐ Advise guests: "We are closed for business and request all persons to leave this area." Give directions to nearest safe exit.
- ☐ Pick up Alpha and Numeric guest registration list from last run and retain on person.
- ☐ Place money and paperwork in cash drawer, cap lid on back and lock drawer.
- ☐ If time permits, remove registration cards, place them in trashcans. Remove bag from trashcan and retain on person.
- ☐ Exit building and go to assigned assembly area.

Room Reservations

- ☐ Place all advance deposits and monies in trash can, remove bag and retain on person.
- ☐ Exit building and go to assigned assembly area.

PBX

- ☐ Will notify Security Dispatch and the Command Center that they are evacuating the area.
- ☐ If possible, disconnect power cords to the switchboard. If assistance is required to disconnect power, make request of Engineering Department.

☐ Exit the building and go to the assigned assembly area.

Valet

☐ Clear all vehicles from the main entrance and hydrant areas that may hinder emergency equipment.
☐ Push all carts/Wheelchairs and other equipment into rooms and out of hallways/pathways that may prevent safe and prompt evacuation.
☐ Proceed to nearest safe exit and assist guests to an assigned assembly area.

Housekeeping

☐ Push all cars and other equipment into rooms and out of hallways/pathways that may prevent safe and prompt evacuation.
☐ Check laundry and trash chute doors and ensure they are in closed position.
☐ Proceed to nearest safe exit and assist guests to an assigned assembly area.

Receiving/Warehouse/Inventory Control

☐ Place all paperwork in drawers and cabinets, if possible.
☐ Lock freezers and gates
☐ Push all carts and other equipment out of hallways/pathways.
☐ Proceed to nearest safe exit and go to assigned assembly area.
☐ Close all overhead doors but do not lock.

Retail Sales Outlets

☐ Place all monies in registers, close and lock drawer.
☐ Inform patrons business must cease and that transactions will be settled later.
☐ Place all paperwork in drawers/cabinets, retain keys and lock all doors.
☐ Proceed to nearest safe exit and go to assigned assembly area.

Credit Department

☐ Place all paperwork in drawers/file cabinets.
☐ If time permits, place all loose checks in trashcan, remove bag and retain on person.
☐ Retain keys and lock all doors upon leaving.

Other Departments

- Total Reward Center/VIP Services
- Group Sales/Bus Transportation
- Information Technology
- Human Resources
- Purchasing
- Executive Offices
- Wardrobe
- Payroll
- Warehouse Storage
- Records Retention
- All other offices not mentioned above will:

☐ Place all paperwork in drawers/cabinets.
☐ Retain keys and lock all doors.
☐ Proceed to nearest safe exit and go to assigned assembly areas.
☐ Activate alarms if applicable

Security

☐ Officers will then proceed to assigned area and begin evacuation according to the Emergency Response Plan.
☐ If the evacuation is due to fire, Officers will be dispatched to affected area and begin a systematic evacuation.
☐ These officers will then respond to the floor above and the floor below the affected area and begin a systematic evacuation.
☐ Officers will notify Security Control and Marine Operations each floor is evacuated.
☐ Security will request assistance from other Departments and assign various duties to assist in evacuation.
☐ A designated Supervisor should be directed to assembly areas to account for employees and guests.
☐ One officer will be assigned to each entrance/exit to prevent re-entry by anyone other than police and/or fire department.
☐ Officer(s) will be dispatched to Pit areas to ensure all chip rack lids have been placed on chip racks and secured. Security Control will be advised upon completion.
☐ Officer(s) will be dispatched to convention/meeting space to assist in evacuation. Dispatch will be so advised when area is clear.
☐ Upon completion of assigned duties, Officers will advise a Security Supervisor that they are available for re-assignment.
☐ After property partially or totally evacuated, Security will, under guidance of Emergency Service Agencies:
- Conduct a sweep of all areas to ensure that all guest and employees have been evacuated.
- All employee work areas will be checked to ensure no one has remained in evacuated area.
- Security Manager will evaluate situation and determine the extent of security coverage required to protect company assets.
- If required, when evacuation is ordered, Supervisor will obtain telephone list of all off duty officers, and recall them to duty in uniform.
- All days off and/or vacations will be canceled until further notice.

Engineers (Facilities)

- Majority of personnel will be assigned to assist Engineering Supervisor.
- Unassigned Engineers will be assigned to assist Security.
- An Engineering employee will be assigned to call in all off duty Engineers.

Guests

Upon arrival at the assembly area employees will assist guests and other employees by:

☐ Speaking with individuals in a calm, confident manner. Assure them that the management and staff are prepared to handle any situation and further assistance will soon arrive.

☐ Keep everyone in assembly location until emergency is cleared or instructed to proceed elsewhere.

☐ Administer minor first aid if needed and/or attempt to obtain assistance from trained medical personnel.

☐ Compile lists of the guest names of those at that location. List should include:

- Name: _____ ( ) Guest
- Address: _____
- Telephone number: _____
- Room Number: _____
- Any person missing from their party: _____
- Special medical problems or needs: _____
- Any other pertinent information: _____

☐ Keep list with you until it can be given to Command Center Personnel or Security. (Do not leave property with this list!)

☐ Do everything possible to keep order and prevent panic.

☐ Assist Rescue Teams as needed.

☐ All questions from media should be directed to Command Center.

EMPLOYEE'S/MANAGER'S/SUPERVISOR'S
EVACUATION PLAN CHECKLIST

1. EVACUATE EMPLOYEES/GUESTS	_____
2. EVACUATION LOCATION (STAGING AREA)	_____
3. TAKE EMPLOYEE HEAD COUNT	_____
4. REPORT MISSING PERSONNEL TO SECURITY	_____

MANAGER'S/SUPERVISOR'S SIGNATURE:_____

ACTIVE SHOOTER

Active Shooter Defined

A person or persons who participate in a shooting spree with the intent of causing serious physical injury or death.

Caution Statement

- **This subject has taken active measures to initiate injury or death on others.**
- **They maybe targeting specific persons or he may just want to hurt themselves.**
- **Common sense tells us they are not of sound mind at the present time.**
- **If for any reason the Active Shooter indicates a desire to communicate then communications should be established. (See Hostage Taking for general guidelines)**

Mission

- To assist the public and employees in escaping the threat.
- To alert facility occupants of the crisis and provide guidance (evacuate or shelter in place).
- To render aid to victims.
- Locate, isolate, contain, and limit the movement of offenders without confrontation.
- To utilize remote surveillance.

General

☐ The first few minutes of a Critical Incident lends itself to chaos and confusion

☐ Until a Command Center is established, employees and guests may have to make split second decisions concerning their personal safety

Several options are available:

- Escape the threat by putting as much distance between you and the Shooter, as quickly as possible.
- Barricade and hide, lock doors if possible.
- Pretend to be dead.
- Cooperate.
- Fight back.

Person Discovering the Situation

☐ Employees who are made aware of an Active Shooter incident must immediately move to a safe location and notify Security Control of location and known facts.
☐ If safe to do so reporting employee should move directly to Security Control.
☐ The reporting employee must not leave property without physically reporting to Security Control.

Security

☐ Security Control will immediately notify the Security Manager/Shift Supervisors who will insure the proper notifications are completed:
- Local Law enforcement (Hammond Police Dept.)
- Local Fire/Medical Departments (Hammond Fire Dept.)
- Surveillance
- Manager of Security and Shift Manager of Security
- IGC
- Regional President and General Manager
- Security Investigators
- Captain

☐ Security Supervisors/Security Investigators shall respond to an Active Shooter Incident; staging in a safe location and attempting to implement the following:
- Establish an open line of communication with Surveillance to monitor the situation from a distance.
- Identify any witnesses to the Active Shooter Incident and have them escorted to Security Control when this can be safely done. Witnesses should be interviewed.
- Be aware of personal safety first, guests and employees safety second and then assets and property.
- Attempt to determine the number of subjects involved in the Active Shooter Incident.
- Attempt to determine the number and types of weapons being utilized.
- Determine the exact area that the Active Shooter is presently occupying.
- Attempt to determine if the Active Shooter has friends or family on property; if positive, escort them to Security Control and interview when safe to do so.
- If safe to do so, attempt to initiate communication with the Active Shooter.

Police Department

☐ When the Police Department arrives they will assume responsibilities.
☐ Security Manager, Supervisors and Security Investigators will remain to assist in any manner possible. This may include continuing a negotiation process if one has been initiated.

Reports

- A full report will be filed with the Manager of Security on the incident. This report will include statements from witnesses, and the names of all parties and officers involved in the incident.
- Reports shall be completed as quickly as possible.

Final Disposition

- ☐ The final disposition of the Active Shooter will be determined by his actions and the decisions reached by the Police Department and the Crisis Management Team, if activated in time.

Final Actions

- ☐ The Manager of Security/Shift Manager of Security or his designee shall request an immediate debriefing of all Security Personnel involved in the incident at its conclusion.

BOMB THREAT

Even though most bomb threats do not result in the discovery of an explosive device, they create a climate of fear.

"Bomb Threat Response" focuses on providing a flexible process that will work for any business while ensuring that each facility creates an effective plan tailored to its situation.

In the event of a bomb threat, Security Officers should be advised that radio transmissions should be terminated. All communications should be by telephone, as radio transmissions have the potential of detonating a bomb.

If a suspicious object is found, it should NEVER be moved touched or jarred.

Switchboard/Security Dispatcher

Most bomb threats are made by telephone. All bomb threats are to be taken seriously. The safety of guests and employees is of the utmost concern. ***NEVER USE THE WORD "BOMB" WHERE PUBLIC CAN HEAR THE TRANSMISSION OR CONVERSATION***

- Bomb Threat calls will be handled on a priority basis.
- A "Bomb Threat" form should be completed as soon as possible, preferably while the caller is still on the line.
- Person receiving call must remain calm and gather as much information as possible.
- Ask caller to repeat the message, particularly the location of the bomb, time of detonation, etc.

Upon receipt of a bomb threat, the Operator or Security Dispatcher receiving the call will:

☐ Notify Security Shift Manager on Duty
☐ Clear all Radio Traffic
☐ Telephone operator receiving bomb threat should immediately notify another operator informing him/her of the call. That operator will notify the Manager on Duty and Security while the original operator stays on the line attempting to gather all necessary information on a bomb threat information form.
- Do not hang up the phone

Security Shift Manager

☐ Contact Surveillance to direct all equipment to potential areas of suspect location.

☐ Notify local law enforcement and Fire Departments and advise them of information known at this time.

SEARCH TEAMS DEFINED

Team No.	Team Leader	Assistants	Assigned Areas
1	Security Supervisor	Security Officers	Common areas in pavilion/all floors, link hallways, elevators, escalators, vault, and vault area, Security Control and Trauma Room parking garages, Casino and exterior perimeter. **Administration offices will be searched by the respective occupant and/or supervisor of the department area, if present under direction of Security.**
2	Valet Supervisor/Gift Shop Supervisor	Valet Supervisor/Gift Shop Supervisor	Coat check, handicapped parking, valet parking, gift shop and smoke shop.
3	Guest Service Supervisor Cage Supervisor, Total Rewards Supervisor Group Sales Supervisor	Guest Service Representatives, Greeters, Cage Cashiers, Group Sales Coordinators	Total Rewards Area, Group Sales, Concierge Area and Land Cage/Land Vault.
4	Maintenance Supervisor	Maintenance Personnel	All maintenance rooms, maintenance storage areas, all outside areas with HVAC or related equipment, maintenance offices.
5	EVS Supervisor Wardrobe Supervisor	EVS/Wardrobe	All restrooms, locker rooms (employee and guests), pavilion and wardrobe area and all public waste containers.
6	Receiving Supervisor	Receiving Personnel	Receiving dock, storage areas, compactor room, storage area(s)
7	Food and Beverage Supervisor/Kitchen Supervisors.	Servers, Bus Person, Bartenders	Kitchen, Food and Beverage Offices and Food and Beverage area
8	Vessel Captain/Marine Shift Supervisor	Marine Crew	All areas of the vessel and if available assist in land/facilities search.

On-Scene Commander notified and assembled the Property Crisis Team.

Notify IGC Agents per Security Operations Manual policy.

The On-Scene Commander will determine the need to inform employees of the threat and the information that will be disseminated.

Threat Level Determined By On-Scene Commander

Level 1
Take no action due to nature and content of the threat.
Cursory search of general public areas conducted by Security and Marine Operations personnel.
Operations to continue as normal.

Level 2
Threat perceived as genuine, with some specific information and/or location, time, etc. given.
Only one threat.
Search Team Leaders notified for standby of search team(s).
Search Team Leaders to conduct cursory search of their respective area.
Operations to continue as normal.

Level 3
Threat analysis determined to be genuine with a specific location, time and/or some detailed information given, or more than one threat has been received.
Search teams formed for search of general and specific area.
Operations to continue a normal or partial evacuation/isolation.

Level 4
Threat analysis determined to be genuine with a specific location, device and/or detailed information of the property or vessel and/or a specified detonation time. More than two threats received.

Partial and/or total evacuation/isolation.
Contact Search Teams and proceed with Search Procedures
Evacuate accordingly following Evacuation Action Plan

Bomb or suspicious packages found:
Contact Hammond Police Department (219) 853-6489
Porter County Bomb Squad (219)477-3000

- No mention of a bomb threat should be made to guests or non-emergency employees or personnel.
- There should be no discussion with the news media concerning an incident by hotel/casino employees.
- All inquiries by the media should be referred to the Command Center and/or General Manager.
- Searching Security Officers, and Marine Operations personnel should be advised to look, listen and smell and not touch, remove, or tamper with any suspect object or package.
- If there is a suspect vehicle, do not touch or attempt to open any doors, trunk, or hood.

EMPLOYEE BOMB THREAT REPORT

DOCUMENT THE EXACT WORDS OF THE PERSON CALLING:
Listen and do not interrupt the caller

_____
_____
_____
_____
Continue on the back if necessary

ASK QUESTIONS LIKE:
When is the bomb going to go off?
_____
Where is the bomb right now?
_____
What does the bomb look like?
_____
What kind of bomb is it?
_____
Why did you place the bomb?
_____

NOTIFY YOUR SUPERVISOR AND SECURITY IMMEDIATELY -- TALK TO NO ONE UNLESS INSTRUCTED BY YOUR SUPERVISOR.

THIS FORM SHOULD IMMEDIATELY BE FILLED OUT BY THE PERSON WHO RECIEVES THE THREAT AND TURNED IN TO THE COMMAND CENTER TO BE USED DURING THE INVESTIGATION.

Property Crisis Team:

- ☐ Assess situation for decision whether or not to evacuate
- ☐ Institute evacuation plan if deemed necessary
- ☐ Institute bomb search procedure whether or not evacuation implemented
- ☐ Handle media and employee concerns

Security

- ☐ The Security Manager must be notified upon any information that a bomb threat has been received.
- ☐ Ensure person receiving the call completes the bomb threat form.
- ☐ If demand for ransom or other thing of value is coupled with the bomb threat, also call the FBI promptly.
- ☐ Consult with Property Crisis Team, and/or the General Manager to determine if bomb search is to be conducted.
- ☐ Security Shift Manager on Duty will execute property search plan, if so ordered.
  - All areas of the hotel/casino will be searched, with priority given to any area which the caller may have designated as being the area in which the bomb was placed.
  - Specific assignment for searching particular areas should be given to **key employees**.
  - Each employee participating in the search should have the telephone number of the Command Center, and should report results of search immediately.

A log will be maintained by a Security Supervisor detailing:

- ☐ Identity of employees conducting search and searching areas assigned
- ☐ Areas searched
- ☐ Officers completing the search
- ☐ Time each specific area searched
- ☐ Time each specific area cleared.
- ☐ Time evacuation was ordered
- ☐ Areas ordered to be evacuated
- ☐ Time explosive device(s) located
- ☐ Location of explosive device located and who located it
- ☐ All other information pertinent to the situation
- ☐ Will ensure that the entire property will be searched a minimum of two times by different officers. Employee(s) from each area may be utilized in the search to help identify foreign items. A checklist should be utilized to ensure complete coverage.

SEARCH TECHNIQUES/GUIDELINES

Search

- The individuals conducting a search should be thoroughly acquainted with the area so they can readily identify items and/or objects as being foreign or out of place.
- The supervisor will normally have this responsibility and will search the immediate area within their respective department.
- Always search in two (2) person teams.
- Enter the room/area; stand still and listen for any clockwork mechanism if possible.
- Make a general, quick look around the entire area/room.
- Divide the room area into equal parts.
- Determine a search height

    1. Waist to floor
    2. Waist to head
    3. Head to ceiling

- Start from one end of the room/area back to back and search the area/room working toward the other person.
- When completed both should be at a middle point.

Return to the starting point and begin the second search.

- Unless caller advises of specific location of bomb, search should begin in public areas:
    - Reception areas
    - Lobbies
    - Rest rooms
    - Restaurants
    - Hallways
    - Lounges
    - Stairwells
- Other areas to be searched should include:
    - False ceiling areas
    - Ventilation ducts
    - Seldom-used storage areas
    - Telephone junction boxes
    - Fan rooms
    - Toilet water reservoir tanks
    - Elevator shafts, special attention should be paid to washrooms, meeting and convention space.
    - Utility rooms
- When searching a room, work around it systematically, checking for items that are normally not present.
- Start searches on lower levels and move up

- Room Searches: If possible, do not change the environment of the room prior to search. Use a flashlight—DO NOT turn on lights or change the setting of thermostats. These actions may activate an explosive device.
    - Divide room in half, then quarters
    - 4-step method
- start at lowest level of room (look under rugs and carpets, under desks and in waste receptacles) waist level, moving up to standing eye level
- From standing persons head, move up to ceiling (air ducts, window tops and light fixtures)
- Above ceiling level (false or suspended ceilings, indirect light fixtures, electrical wiring)
- As each area has been searched, cleared and reported by telephone, the Command Center will be notified.
- Termination of Search will be authorized by Command Center personnel

Found Suspicious Item

- Should a bomb or suspicious item be found, **IT IS NOT TO BE TOUCHED OR DISTURBED IN ANY WAY.** Removal of any strange or suspicious object must be left to Police or Fire Department bomb squads.
- Immediately clear the area for 300 feet around device, including floors above and below device.
    - Command Center will be immediately notified by telephone.
    - Security Officer will remain in vicinity of the item at a safe distance and allow no one to disturb it until Bomb Squad has examined the item.

- Responsibility for evacuation rests with Bomb Squad, law enforcement and/or Fire Department.
- If evacuation is ordered by law enforcement or Fire Departments, the Evacuation Plan will be followed.
- Communication should be by telephone. ***Under no circumstances should radios be used within 50 feet of a suspicious object.***

Post Blast Investigation

- Security personnel shall respond to the scene to ensure maximum protection of life and property and to guard the crime scene that will be investigated by the local police agency.
- **No one** is to be permitted into the area surrounding the post blast scene except Rescue, Police and Fire Agencies. Names, department and time of entry should be noted for the report.

CHEMICAL / BIOLOGICAL THREAT

A chemical attack could utilize chemicals specifically designed as weapons, such as nerve gas, or common commercial chemicals, such as chlorine. The chemicals would most likely be gases or aerosols. If the attack is outdoors, the wind will spread the chemicals but will also quickly disperse them. The key to surviving a chemical attack is to *quickly* get to a place where the air will remain clean.

How to Identify a Chemical Attack:

Some poisonous gases may or may not have an odor. Most will **not be visible**. The most likely **first sign** that you have been exposed to dangerous chemicals will be **symptoms** felt by you and others around you; depending on the chemical used, these symptoms may include:

- Stinging eyes and throat
- Running eyes
- Coughing
- Nausea
- Loss of coordination

General

☐ Seal off the affected area and do not remove the substance from this area.
☐ Notify Security.
☐ Notification will be made to the fire department and police department, advising them of a possible chemical-biological contamination.
☐ Notification should be as follows:
- General Manager or delegated representative
- Security Manager/ Shift Manager of Security
- Local law enforcement/Fire department
- Director of Facilities and Marine Operations
- Risk manager
- Communications personnel
- Surveillance supervisor on property to conduct video search of possible suspect

☐ At minimum, the employee/patron should immediately wash the primary affected area, hands and forearms.
☐ Thereafter, the affected employee/patron should be advised to remove his/her outer layer of clothing and place them into a biohazard bag provided by the EVS and they must seal their clothing in this bag. (remember these articles of clothing are evidence) This biohazard bag should be left in the location where this incident took place. Any personal assistance should, if possible, be provided by a person of like gender.

- ☐ The employee/patron should wash thoroughly with soap and water and be provided with a change of clean clothing.
- ☐ Wardrobe should be notified and temporary replacement clothing should be obtained for the affected employee/patron.
- ☐ Inform the employee/patron involved that they will be notified of the next step pending the results of substance testing.
- ☐ Once the fire and police departments arrive at the property, they will take charge of the scene.
- ☐ The substance will be tested and if this substance is determined to be anthrax or some other biological substance, the responding police, fire or HAZMAT department will handle the clean up and removal of this substance. The police and fire departments will make the determination if we have to evacuate the property.
- ☐ If the tests reveal this substance is not anthrax then EVS will be notified and immediately clean this area.
- ☐ Media inquires should be handled by communications

CHEMICAL SPILLS

Despite the best efforts of personnel, accidents resulting in chemical releases can occur. The two common types of spill are an "Emergency"' spill and an "Incidental" spill.

Emergency response: As defined by OSHA, an emergency response or responding to emergencies means a response effort by employees from outside the immediate release area or by other designated responders (i.e Hazmat team, clean harbors, etc.) To an occurrence which results, or is likely to result, in an uncontrolled release of a hazardous substance.

Incidental release: Response to incidental releases of hazardous substances are not considered to be an emergency response where the substance can be absorbed, neutralized or otherwise controlled at the time of release by employees in the immediate release area, or by members of the hazmat team, provided that the substance is limited in quantity and poses a minor potential safety or health hazard (i.e. Fire, explosion or chemical exposure) to the employees in the immediate vicinity.

General Procedures

- ☐ Immediately alert fellow workers and immediate supervisor.
- ☐ Evacuate the immediate area
- ☐ Check the Material Safety Data Sheet (MSDS) to determine the urgency of the situation.
- ☐ For all spills, all contaminated clothing must be removed immediately and the skin washed with soap and water.
- ☐ Flush skin with water for no less than fifteen minutes.
- ☐ Clothes must be laundered before reuse, and must be washed separately from other clothing.
- ☐ If there is no fire hazard and the material is not particularly volatile or toxic, proceed to clean it up as directed in the MSDS file.
- ☐ If volatile, flammable or toxic material is spilled, immediately warn everyone to extinguish flames and turn off spark producing equipment.
  - Shut down all equipment and vacate the area until it is decontaminated.
  - The supervisor or manager is responsible for designating the extent of evacuation and the proper clean up procedure.
- ☐ For acids and other acid materials use calcite absorbent products.
- ☐ Notify local, state or federal agencies as required in your particular area

CIVIL DISTURBANCE

The following procedures apply should your property and/or community experience a major civil disturbance:

Person Identifying Situation

☐ Observe and report activity of group
☐ Notify Security
☐ Move to a safe environment

Management Procedures:

☐ Establish Command Center (If needed)
☐ Monitor radio and television broadcasts
☐ Schedule Security manpower to 12-hour shifts (If needed)
☐ All days off and vacations should be cancelled (If needed)
☐ Ensure water, power and telephone service are secured
☐ Issue two-way radios to all on-duty security and pertinent management personnel
☐ If deemed necessary, restrict entrance to hotel/casino
- It is permissible to restrict entrance to only registered guests, guests who wish to register or have a confirmed reservation, employees, and only those individuals who have official business in the hotel/casino.
- If an entrance is locked, a security officer should be posted at the entrance with keys to permit emergency entrance/exit by a guests or employees.

☐ Maintain liaison with Law Enforcement
☐ Coordinate media communications
☐ If safe to do so and disturbance is out of range of surveillance cameras then the incident will be recorded with handheld cameras.

Security:

☐ Advise local law enforcement with basics of situation (alleged cause, how many people demonstrating, action being taken by crowd, etc.)
☐ Advise senior management person of what is taking place and available information concerning the group, cause, etc.
☐ Secure the area with assistance of Police
☐ Notify the Property Crisis Team
☐ Cooperate and coordinate with police upon their arrival.
☐ Important to make effort to keep demonstrators out of the property buildings.
☐ Should buildings be closed by order of the property General Manager, Security and Maintenance personnel will install barriers and lock doors.
☐ Security Officers will be assigned to each major entrance/exit

- ☐ Guests attempting to leave the closed building should be advised of the possible danger.
- ☐ Only Law Enforcement, Fire or Emergency Medical Personnel will be allowed in the building.

DEATH ON PROPERTY

In any populated area there is a possibility of death occurring. In the unfortunate event that a death is discovered on property it is important to remain calm and follow the procedure listed below.

Person discovering the situation

In the event that a deceased person is located in the property, do not disturb the scene other than to determine if the person is deceased. Make an immediate notification to the Security Control.

Security

☐ Security Dispatcher will immediately notify:
- Security Shift Manager
- Security E.M.T.
- IGC
- Local law enforcement

☐ The Manager of Security will be notified by the Security Shift Manager.

☐ The crime scene will be secured and all personnel without knowledge of the incident will be removed from the area.

☐ Medical personnel will be summoned. **THEY WILL ONLY CHECK VICTIM FOR VITAL SIGNS. THEY SHOULD NOT DISTURB THE AREA IF AT ALL POSSIBLE.**

☐ Secure the scene until medical and law enforcement authorities arrive to take over the situation.
- **UNDER NO CRICUMSTANCES ALLOW ANYONE TO TOUCH OR DISTURB IN ANY WAY THE CRIME SCENE UNTIL THE PROPER PERSONNEL ARRIVE, THEN REMAIN AT THEIR DISPOSAL UNTIL THE SITUATION IS CLEARED OR YOU ARE RELIEVED BY YOUR SUPERVISOR OR THE SECURITY DIRECTOR.**
- No personnel other than those authorized by your supervisor or manager will be allowed to enter the crime scene until the proper authorities arrive.

☐ Obtain statements from anyone with knowledge of the incident especially the person who found the victim. Remove these persons to Security Control.

☐ Safeguard victim's friends and family and property from any type of publicity other than that being released by the proper authorities.

☐ A full report will be complied by security.

☐ An investigator will be called if on duty to compile a report. If one is unavailable then a Security Supervisor will compile the report. Be sure you have all the information needed before you leave the scene of the incident.
- Remember, it may could look like a suicide, or natural death, and turn out to be a homicide. Treat any and all such incidents as a homicide until you have been relieved by the proper personnel.

- In all cases, extreme care must be taken to avoid undue publicity or embarrassment to the family of the deceased or other guests during the investigation and removal of the body.

☐ Radio traffic should be held to a minimum.

DISCOVERY OF A CRIME AFTER THE FACT

Person discovering the situation

- ☐ Notify Security
- ☐ Go to a safe place and wait for Security. Report anything noted of relevance to Security officer.

Security

- ☐ Respond to area of crime.
- ☐ Administer first aid to victim, if necessary.
- ☐ Secure the area of any crime scene.
- ☐ Security will contact the Property Crisis Team, if necessary.
- ☐ Notify Security Shift Manager, and Manager of Security.

EARTHQUAKE

Due to hazards created during a major earthquake, it is recommended that people be instructed not to leave the building. If a fire or severe structural damage creates a situation where evacuation is ordered, security will follow the procedures outlined in the emergency procedures for evacuation section in this manual. The assembly area will be based on the scope and nature of the emergency. It must be kept in mind that within seconds, minutes or even hours there may be (and usually is) another quake or after-shock which can be even more devastating than the first one.

General Planning Considerations:

Following are guidelines for preparing for earthquakes:

- Assess your facility's vulnerability to earthquakes. Ask local government agencies for seismic information for your area.
- Have your facility inspected by a structural engineer.
- Follow safety codes when constructing a facility or making major renovations.
- Inspect non-structural systems such as air conditioning, communications and pollution control systems. Assess the potential for damage. Prioritize measures to prevent damage.
- Inspect your facility for any item that could fall, spill, break or move during an earthquake. Take these steps to reduce these hazards:
    - Move large and heavy objects to lower shelves or the floor. Hang heavy items away from where people work.
    - Secure shelves, filling cabinets, tall furniture, desktop equipment, computers, printers, copiers and light fixtures.
    - Secure fixed equipment and heavy machinery to the floor. Larger equipment can be placed on casters and attached to tethers which attach to the wall.
    - Add bracing to suspend ceilings, if necessary.
    - Install safety glass where appropriate.
    - Secure large utility and process piping.
- Keep copies of design drawings of the facility to be used in assessing the facility's safety after an earthquake.
- Review processing for handling and storing hazardous materials. Have incompatible chemicals stored separately.
- Ask your insurance carrier about earthquake insurance and mitigation techniques.
- Establish procedures to determine whether an evacuation is necessary after an earthquake.
- Designate areas in the facility away from exterior walls and windows where occupants should gather after an earthquake is an evacuation is not necessary.
- Provide personnel with the following safety information, if feasible:

- In an earthquake, if indoors, stay there. Take cover under a sturdy piece of furniture or counter, or brace yourself against an inside wall. Protect your head and neck.
- If outdoors, move into the open, away from buildings, streetlights, and utility wires.
- After an earthquake, stay away from windows, skylights, and items that could fall.
- Do not use the elevators.
- Use stairways to leave the building if is determined that a building evacuation is necessary.

Engineering

The engineering department will be responsible for shutting off all the gas, if safety permits, and manually securing all guest and service elevators at casino level. In the event of a fire, the procedures outlined in the emergency procedures for fire/smoke section of this manual will be utilized. After all danger has passed and any evacuation completed, all unnecessary entrances will be secured. All broken windows at street level will be boarded up, if necessary. Structural damage will be checked and temporary repairs done.

Security

Procedures will be followed as outlined in the emergency procedures for fire/smoke and the emergency procedures for evacuation sections of this manual if applicable. Officers will be dispatched to check hotel stairwells to see that they are safe to use.

PBX

The notification priorities will be the same as outlines in the emergency procedure for fire/smoke section of this manual. The PBX operators or the staff operating the PA system will advise everyone to remain calm and assure them that there are emergency teams functioning throughout the complex. The following rules must also be announced:

- Do not use smoking materials, matches, lighters, etc.
- Do not attempt to use elevators or stairwells until told to do so.
- Do not use the telephones.
- Stay away from windows.
- Do not attempt to leave the building until told to do so.
- Remain where you are until emergency personnel are able to guide you to safety.

ELEVATOR EMERGENCIES

Upon receiving an emergency call, from patrons in the problem elevator or other parties aware of the situation, security and facilities will carry out the following procedures:

Security

Security will carry out the following procedures:

- ☐ Control the crowd around the emergency
- ☐ Attempt to contact the person(s) inside the elevator, along with Security Control via emergency phones located inside of the elevator
- ☐ Security supervisor will be at the elevator when opened and assist guests in any way possible.
- ☐ Record incident reports from all appropriate parties
- ☐ Secure area with stanchions and signs
- ☐ If unable to open contact the fire department.

Engineering

Engineering will initiate the following:

- ☐ Contact the elevator company. Have them respond to the scene
- ☐ Ascertain the vertical location of the elevator
- ☐ Attempt to open the doors, if it is NOT between floors
- ☐ Assist security in attempting to contact individual(s) inside the elevator
- ☐ Secure the elevator from being used until it has been cleared, in writing, by the elevator service company.

NOTE: At no time should anyone, except the elevator company, attempt to control the motion of the elevator. At all times, the emergency is to be treated as though persons were inside of the stricken elevator.

If removal of persons inside of the elevator is necessary because of medical conditions, circuits must be turned off and locked out.

EXTORTION / KIDNAPPING

Kidnapping

Kidnapping demands are usually accomplished by the use of a telephone/cell phone. Other means available are e-mail, notes, or possibly in person.

The demand is usually accompanied by some type of threat as to what will occur if the demand is not met. The kidnapping demand/ransom will usually involved money. No matter how the demand is received, the kidnapping demands/ransom must be immediately referred to the Security Manager/Supervisor on duty who will make the proper notifications: (See Notification List below):

Extortion

Extortion demands may be accomplished by several means such as telephone/cell phone, in person, by mail, or a note. Some have even been made by e-mail. The demands will usually be accompanied by some threat as to what will happen is the demands are not met. No matter how received, extortion demands must be immediately referred to the Security Manager/Supervisor on duty, who will make the proper notifications: (See Notification List below)

Notification List

- Manager of Security/Security Director
- Hammond Police Department
- General Manager
- Federal Bureau of Investigation
- Command Center should be immediately initiated if necessary
- Corporate Investigations
- Division President

Security

Security Shift Manager should immediately respond to the location of where the demand was received.
Assist personnel with the reporting requirements
Monitor telephones in the area if a call had been received in the event a second call is placed
All Security Officers should be updated with all available information if pertinent.
Security Officers should be observant for any suspicious activity or persons, taking special note of areas containing public phones.
Attempt to determine if there are any pertinent witnesses and if identified escort them to Security Control to be interviewed.

Person Receiving the Threat by Telephone

Complete a Kidnapping/Extortion Initial Report
Security Shift Manager hand deliver the Initial Report to the Command Post or the
Do not leave property until given approval to do so by the Command Post

☐ **SUBMIT TO SECURITY AS SOON AS POSSIBLE**

FIRE / SMOKE

☐ Immediately call Security and provide them with the following information:
- Your exact location
- What is burning
- Extent of the fire

☐ If you cannot safely extinguish the fire using the contents of one (1) fire extinguisher:
- Alert all personnel in your area and pull the emergency pull station to activate the alarm.
- Exit the room or hallway immediately following **Emergency Evacuation Plan.**
- Close any office doors.
- **WALK** calmly to the nearest emergency exit or emergency stairwell, exit the building and proceed to the staging area **(A- Whihla County Park or B- Guest Overflow Parking Lot)**
- Do not use the elevators.
- Have an alternate emergency exit in the event yours is blocked.
- All employees will be notified when re-entry into the building is safe.
- **IF IT IS HOT, DO NOT OPEN IT.**
  - If you can reach the phone, call Security giving your exact location, floor number and office number or name.
  - Advise security that you are trapped.
  - Place an article of clothing, blanket or similar item along the bottom of the door to keep the smoke out.
  - Retreat as far from the door and heat source as possible and await rescue personnel.
- **IF THE DOOR IS NOT HOT:**
  - Open slowly, standing behind it.
  - If no danger is present, walk to the nearest emergency exit following **Emergency Evacuation Plan.**
  - If the area is smoke-filled, stay low and/or crawl to the nearest exit.

Security Dispatcher and/or PBX Operator

☐ Advise Fire Department of all known information such as location, type of emergency, easiest access (if known), how the notification to the hotel/casino was made and any other information they request.

☐ Even if there is an automatic Fire Department notification system, the Fire Department should still be contacted by telephone.

☐ Public Address Announcements will be made by appropriate personnel, usually security or engineering. Ensure that the announcements are periodically made until the "all clear" announcement is made.

☐ Notify and advise each of the following individuals with all information known:

1. Fire Department
2. Security Shift Manager
3. Manager of Security
4. Shift Manager of Security
5. General Manager
6. Assistant General Manager
7. Facilities Manager/Vessel Captain or Marine Operations Supervisor

☐ Answer phone calls from guests and employees on the designated phone line(s) advising them:
- If threatened, proceed to the nearest exit/stairway and exit the building and assemble in a designated area.
- State that the hotel/casino is investigating the source of the alarm and that the Fire Department is responding.
- Advise caller(s) that further instructions will be given as soon as the hotel/casino is advised by the Fire Department.

☐ Log the times that the following phone calls were made or received:
- Notification of an emergency situation
- When Fire Department notified
- When senior Manager on duty was notified.
- When Engineering and Security were notified.

☐ Maintain contact with responders and follow their instructions.

Marine Operations (MOPS) personnel along with personnel from facilities and security will respond to fires property-wide. The Marine Operations Supervisor on watch will be the On-Scene Leader for fire operations and will direct personnel from facilities and security. Facilities personnel will be responsible for securing power and ventilation as directed and assisting on-scene with fire-fighting equipment. Security will secure the area of the fire and assist on-scene and with transporting MOPS personnel and equipment. Security will also search and evacuate adjacent areas and make reports to the On-Scene Leader. The Marine Operations Supervisor will give a brief situation report and hand over on-scene leadership to Hammond Fire Department (HFD) if they are called to the incident.

Concept of Operations

☐ GeneralResponsibilities

- Marine Operations: Bring fire-fighting equipment to the scene and attempt to extinguish the fire according to the Emergency Response Plan.

- Security: Secure the area and assist with fire-fighting equipment as directed by the Marine Operations Supervisor. Transport MOPS personnel and equipment. Provide keys to Marine Operations Supervisor. Monitor and provide updates from information displayed on the Fire Control Panel. Security will also direct HFD to the scene if necessary.

- Facilities: Stand by to secure power and ventilation at the direction of the Marine Operations Supervisor. Facilities will also assist Marine Operations or HFD with connections to the fire main system.

- Hammond Fire Department: If HFD assumes on-scene leadership, Horseshoe personnel will stand by to assist as necessary.

Muster Points:

Marine Operations, Security Supervisor, and Facilities Lead will coordinate fire response activities from the muster point specified by the Marine Operations Supervisor.

1. Car Fire
   Pavilion Garage Muster Point: 2nd level elevator lobby
   Marina Garage Muster Point: 1st level elevator lobby

2. Pavilion Building/Garage Fire
   Primary Muster Point: Employee Boarding Ramp
   Secondary Muster Point: Entrance by Pavilion Valet Circle

3. Marina Building/Garage Fire
   Primary Muster Point: Marina Boarding Ramp
   Secondary Muster Point: Marina Garage Freight Elevator

4. Transfer Walkway Building Fire
   Primary Muster Point: Employee Boarding Ramp
   Secondary Muster Point: Marina Garage Elevator Lobby

5. Valet Trailer Fire
   Primary Muster Point: Marina Boarding Ramp
   Secondary Muster Point: Entrance by Pavilion Valet Circle

6. Trailers in Employee Parking Lot
   Primary Muster Point: Entrance by Pavilion Valet Circle
   Secondary Muster Point: Marina Boarding Ramp

7. Warehouse Building Fire
   Primary Muster Point: Entrance by Pavilion Valet Circle
   Secondary Muster Point: Marina Boarding Ramp

Assets

- (2) mobile fire fighting equipment carts pre-positioned near the elevators in each garage. Each cart will contain:
  - (2) turnout jackets
  - (2) turnout pants

- (2) sets of fire fighting boots
- (2) flash hoods
- (2) sets of fire fighting gloves
- (2) SCBA's
- (2) fire fighting helmets
- (1) Mulligan bar
- (1) fire ax
- (1) seatbelt cutting tool
- (4) lantern battery size flashlights
- (1) 2-1/2" to 1-1/2" wye gate
- (1) 50' section of 2-1/2" fire hose
- (2) 50' sections of 1-1/2" fire hose
- (2) fire hose nozzles
- (5) 15lb "Cold Fire" fire extinguishers (or equivalent)
- (1) Hand portable vehicle loading ramp for cart

Blanket drag:

- Remove blanket or sheet from bed.
- Place blanket/sheet beside victim and spread fully.
- Roll victim to center of blanket/sheet.
- Roll edges of blanket/sheet on either side close to victim.
- Grasp blanket/sheet edges beside the victim's head.
- Lift and pull at the same time.
- Drag victim to a safe area.

NOTE: These methods enable a smaller person to assist a larger victim. The blanket drag is one of the fastest yet safest methods for removing a victim from a danger area.

- If there is reason to believe that more than one victim is involved; remove one victim to a place of safety then return to search for additional victims.

☐ First aid for victims with breathing difficulty

Conscious victim with breathing difficulty:

- Administer oxygen.

Unconscious victim not breathing:

- Establish airway.
- Mouth to mouth resuscitation.
- Mouth to nose resuscitation.
- Bag mask resuscitation

Unconscious victim not breathing, no pulse:

- Establish airway, begin assisted breathing.
- Cardio-Pulmonary Resuscitation (CPR).
- Automatic External Defibrillator (AED).

☐ Assist in accessing secured areas of the hotel/casino.

☐ Establish liaison with senior police and fire officials and investigators of the incident.

☐ Make a full investigation, compile names of involved persons, and complete an incident report.

☐ Assist Management in restoring hotel operations after a fire alarm or evacuation.
☐ Refer all media inquiries to the General Manager or Property Crisis Team.

Housekeeping/ Maintenance Personnel

Housekeeping and Maintenance personnel working on guestroom floors and the public areas of the casino have the best chance of detecting a fire condition. These personnel, if fire or smoke is detected, should:

☐ Sound the fire alarm
☐ Call the Switchboard or Security Dispatcher and give location and description of the fire.
☐ Close doors to confine the smoke/fire.
☐ Move carts into guestrooms or closets to clear corridors.
☐ Assist guests in evacuating the hotel/casino and advise them of the location of the designated assembly area for housekeeping/maintenance personnel.

Back of the House Personnel

Personnel assigned to the back of the house areas such as the laundry, tailoring room, uniforms, and storage areas, should accomplish the following tasks during a fire/smoke emergency situation:

☐ Sound the fire alarm
☐ Call the Switchboard or Security Dispatcher and give location and description of the fire.
☐ Ensure exits and various evacuation routes are clear.
☐ Evacuate the building.
☐ Assemble in the designated area after evacuating the hotel/casino.

FLOOD

Most floods develop slowly over a period of days. Flash floods, however, are like a wall of water that develop in a matter of minutes. Flash floods can be caused by intense storms or dam failure.

General

- Power to lower levels may be cut off.
- Lover level area may be totally evacuated.
- Emergency procedures will be the same as outlined in the emergency procedures for fire/smoke section in this manual.
- Listen and follow instruction given over PA system.
- Remain calm and assist in whatever actions are necessary.
- Do not handle or operate live electrical equipment in wet areas.
- Electrical equipment must be checked and cleaned before returning to service after becoming wet.
- All employees will aid in clean-up and salvage operations as directed by the Property Crisis Team.

Planning Considerations

Consider the following when preparing for floods:

- Vital records stored in low-level area must be transported to upper levels.
- Ask your local emergency management office whether your facility is located in a flood plain. Learn the history of flooding in your area. Learn the elevation of your facility in relation to streams, rivers and dams.
- Review the community's emergency plan. Learn the community's evacuation routes. Know where to find higher ground in case of a flood.
- Establish warning and evacuation procedures for the facility. Make plans for assisting employees who may need transportation.
- Inspect areas in your facility subject to flooding. Identify records and equipment that can be moved to a higher location. Make plans to move records and equipment in case of flood.
- Purchase a National Weather radio with a warning alarm tone and battery backup. Listen for flood watches and warnings.
    - **Flood Watch** – Flooding is possible. Stay tuned to radio. Be prepared to evacuate. Tune to local radio and television station for additional information.
    - **Flood Warning** – Flooding is already occurring or will soon. Take precaution at once. Be prepared to go to higher ground. If advised, evacuate immediately.
- Ask your insurance carrier for information about flood insurance. Regular property and casualty insurance does not cover flooding.

- Emergency flood proofing measures include:
    - Building walls with sandbags.
    - Constructing a double row of walls with boards and posts to create a "crib," then filling the crib with coil.
    - Constructing a single wall by stacking small beams or planks on top of each other.
- Consider the need for backup systems:
    - Portable pumps to remove flood water
    - Alternate power sources such as generators or gasoline-powered pumps
    - Battery-powered emergency lighting
- Participate in community flood control projects.

FOOD BORNE CRISIS

Operational Response

When a food borne crisis occurs, it is of utmost importance that all employees clearly understand the procedure to be followed.

General

- The procedures for a food borne crisis consists of three distinct sections that mirror the actual phases of a crisis situation:
  - Pre-Crisis Preparation
  - Operational Response
  - External Communication
- Each section must be clearly integrated into each hotel/casino's standard operating procedures and clearly communicated to all current and future employees.

Pre-Crisis Preparation

- A management person must be designated to take charge during a food borne crisis. Backups must be clearly assigned to ensure seven-day-a-week coverage.
- Emergency telephone numbers must be maintained and should include business and after-hour numbers for local Health Department and Poison Control Center.
- Ensure all potentially involved employees are trained in your policy and procedures regarding this issue. This should be done during Management meetings and Food and Beverage staff meetings.

Person Receiving Complaint

☐ Follow standard hotel emergency procedures.

☐ Contact manager or designated hotel/casino representative immediately, and forward the call or information immediately.

- Do not have extensive conversation or discussion with the complainant regarding the situation.

Manager or Designated Hotel/Casino Supervisor

☐ Record complaint by obtaining all information required to clearly identify the affected individual, the specifics of the occurrence and the action taken to date.

- The following information is required:
  - Guest's Name, address and phone numbers (home and work)
  - Specific signs and symptoms of the complaint
  - Names, addresses and phone numbers (if possible) of other guests in the party
  - To whom it was previously reported, if any
  - Date and time the guest became ill

- Duration of the illness
- Symptoms of the illness
- Details of the suspected food items consumed and other foods or beverages consumed or medications taken before or after
- Name of the physician or hospital consulted
- Any known allergies or medication/inoculation taken before the illness

☐ During conversations with complainant, show compassion and express concern for their well being.
- Advise that we intend to investigate the complainant and are requesting the above information to assist in the investigation.
- Caution should be exercised during conversations to ensure understanding that the information being requested is "not for the purpose of invading their privacy, but because we want to accurately determine the facts surrounding the incident.
- Also relate clearly that all personal information will be kept confidential.
- If an individual refuses to provide any of the requested information, do not pressure them to provide it.

☐ Remain polite and concerned even if you doubt the legitimacy of the complaint. Do not argue, but do not admit liability.

☐ Let the person tell their own story—do not suggest symptoms.
- Be sure to record the time of the onset of the symptoms.
- Try to get a food history. If possible, attempt to include foods eaten or medications taken before or after the person was at our operation.

☐ **Do not offer medical advice.** Simply gather the information

External Communication

Corporate communications should be contacted to assist with the dissemination of information to the media.

HOSTAGE TAKING

Person Discovering the Situation

Employees who are made aware of a hostage situation should immediately move to a safe location and notify Security Control.

Security

☐ Security Control must immediately notify the Security Manager/Supervisor on duty who will insure the proper notifications are made:
- Local law Enforcement (Hammond police Department)
- Local fire/Medical department (Hammond fire Department)
- Surveillance
- Manager of Security and Shift Manager of Security
- Security investigators
- IGC
- Regional Vice President and General Manager
- Captain

☐ Security Supervisor/Security Investigators shall respond to the hostage taking scene.

☐ The area should be cleared of all persons except Security/police. Onlookers and curiosity seekers must be kept clear of the area

☐ Any witnesses to the hostage taking should immediately be escorted to Security Control for interviewing.
- Attempt to determine if subject came to the property alone, or with someone.
- If subject has friends or family on property they should be escorted to Security Control immediately and have them interviewed.

☐ President/General Manager and Manager of Security will determine the need for evacuation.

☐ Security supervisors/Security Investigators responding to the hostage situation should attempt to implement the following procedures:
- Determine if weapons are involved, and what type.
- Use extreme caution in approaching the subject: Understand cover and concealment.
- If safe to do so, engage the subject in a dialogue.
- Determine subject's name.
- Determine if subject and hostages are okay.
- Keep in mind a subject who has taken a hostage/hostages may have serious emotional/mental problems.
- Never attempt to negotiate face to face if a subject is armed.
- Remain calm, logical, and proceed in a slow and deliberate pace.
- Never negotiate alone

☐ Care must be taken to protect security officers, hostages, and guests

- Be aware that a subject who has taken Hostage/hostages is a real threat to officers and guests and may even want to hurt himself.

☐ Contact with the subject should be immediately initiated. Only one person conducts the verbal negotiations, a second person should be taking notes.

☐ Certain attitudes should be used when dealing with a hostage situation

- Use Active listening Skills (ALS)
- Assume a gentle, firm, positive demeanor
- Use a soft, calm, reassuring voice
- Do not ask for demands, or what the subject wants. If it is important to them they will bring them up.
- Do not make a promise you can't keep
- Try to avoid saying "No"

☐ When the Hammond Police Department arrives they will assume responsibilities.

☐ Security Supervisors/Security Investigators will remain to assist in any manner possible. This may mean continuing with the negotiation process.

☐ A full report will be filed with the Security Manager on the incident. This report will include statements from witnesses, names of all parties and officers involved in the incident. Also include all actions taken by the Security Officers in contact with the subject.

- The final disposition of the subject will be determined by his actions and the decisions reached by the Crisis Management team involved in the situation.
- The Manager of Security/ Shift Manager of Security should request an immediate debriefing of all Security personnel involved in the incident at its conclusion.

MEDICAL EMERGENCY

DEFINITIONS

Medical emergencies: May include, but are not limited to, choking, heart attacks, chemical exposure, cuts, burns, loss of consciousness and illness.

Universal Precautions: The Horseshoe Casino employees practices "Universal Precautions" when dealing with blood or body fluids. As a result, we treat all human blood and body fluids such as vomit, saliva and sweat as if they are known to be infectious for HBV, HIV and other bloodborne pathogens. In circumstances where it is difficult or impossible to differentiate between body fluid types, ***assume all body fluids to be potentially infectious.***

WARNING: Exposure to blood and body fluid may cause the transfer of infectious diseases. Follow Universal Precautions and wear appropriate personal protective equipment to protect against bloodborne pathogens when there is the possibility of exposure to blood or other body fluids. For more information on Universal Precautions and appropriate personal protective equipment, refer to Horseshoe Casino's Bloodborne Pathogens Exposure Control Plan.

TRANSPORTING VICTIMS TO A MEDICAL FACILITY

- For medical emergencies, call an ambulance.
- For non-emergency situations that still require medical treatment, the employee may transport him/herself, call someone or have Security transport them.

MEDICAL CLEANUP

- To clean up or/or decontaminate items contaminated with blood or body fluids, follow the procedures detailed in Horseshoe Casino Bloodborne Pathogens Exposure Control Plan.

INJURY/ILLNESS NOTIFICATION

- All employee injuries, illnesses or accidents must be reported within 24 hours on the Horseshoe Casino Injury, Illness and Incident Report and documented in applicable OSHA Logs. OSHA will be contacted by the Manager of Risk Control within 8 hours of an employee death or hospitalization of three or more employees.

GENERAL PROCEDURES

Medical Emergency:

All Employees

- Stay with the victim and have another employee call Security Control.
- DO NOT CONTACT BLOOD OR BODY FLUIDS.

EMT-B and/or Paramedic

- Use Universal Precautions.
- Have another employee Notify Security Control, if necessary.
- The highest-ranking EMT will maintain communication with responding personnel and act as the triage officer.

Security Control

- Call for an ambulance – "911"
- Contact the on-site EMT or CPR/First Aid trained employee as appropriate.
- Meet the outside EMTs at the front door and escort them to the victim's location.
- Ensure the victim completes a Horseshoe Casino Accident/Incident Report Form.

CPR/First Aid Trained Employees

- Use Universal Precautions
- Have another employee notify Security Control, if necessary
- Evaluate the situation surrounding the accident using the SETUP method:
- Stop: Take a breath, think primary assessment, think mechanism of injury (forces involved)
- Environment: Consider the limitations
- Traffic: Vehicle position, safe approach, remain alert
- Unknown Hazards: Consider limitations, gas, chemical, electrical, fire, collapse, explosion, radiation, lack of oxygen, weapons
- Protect Self and Patient: Use barriers, prevent further harm
- If it is not safe to approach the victim, contact other Crisis Management Team Members as appropriate. For example, you may have spotted the victim down in a room lying next to a spilled or releasing chemical substance. This spilled or releasing chemical substance may have overcome the victim and is the reason he/she is unconscious. In this case, call the On-Scene Incident Commander or a Hazardous Materials First Responder.
- If it is safe to approach the victim, evaluate his/her condition and perform the necessary ABCs of emergency care.

In the event of a medical emergency please pick up any house phone and dial "6165" or "0" the person reporting the emergency will be responsible for the following:

☐ Obtain as much information from individual or witnesses as possible.
☐ Notify switchboard or security dispatcher and indicate the medical emergency. They will contact emergency response and ambulance(s) if necessary.
☐ Be available to provide information to crisis management team or security about the situation.

Instructions for the Call Center

- Emergency calls will be handled on a priority basis.
- The operator will determine whether the call is an emergency or a non-emergency request for medical assistance.
- The following data must be readily available to telephone operators:
  - Telephone numbers of responsible paramedic unit, public emergency and/or rescue service.
  - Name and telephone number of a nearby private ambulance service for specific guest requests.
  - Name, address, and telephone number of a clinic with 24 hour emergency service.
  - Name, address, and telephone number of a hospital with 24 hour emergency service.
  - Name, location, and shifts of all personnel trained in CPR and/or AED.

Instructions for Security Control

- If guest is unconscious, has stopped breathing, has severe bleeding or other situation requiring immediate professional attention, IMMEDIATELY call paramedics, public emergency or rescue service for an ambulance, thereafter notifying security CPR trained employee to respond.
- A designated employee should be dispatched to meet the ambulance and direct attendants to the guest.
- The highest ranking member of management must be notified.
- The following data must be readily available to security dispatchers:
  - Telephone numbers of responsible paramedic unit, public emergency and/or rescue service.
  - Name and telephone number of a nearby private ambulance service for specific guest requests.
  - Name, address, and telephone number of a clinic with 24 hour emergency service.
  - Name, address, and telephone number of a hospital with 24 hour emergency service.
  - Name, location, and shifts of all personnel trained in CPR and/or AED.

Security

- ☐ Will contact senior management person on duty who will make decision as to whether or not to implement Crisis Management plan.
- ☐ Will have a presence at the scene, record all activity and maintain contact with senior management official.
- ☐ Will contact health authority, police, fire, etc.
- ☐ Will maintain records of all contacts (time, person contacted, etc)
- ☐ Will prepare written report of the incident and all actions taken

Surveillance

- ☐ If incident occurs within area covered by cameras, continuous monitoring of situation should be maintained
- ☐ A copy of the tape should be made and provided to security department. The original tape should be retained in the surveillance department and handled as evidence

Property Crisis Team (If activated)

- ☐ Set up Command Center if warranted
- ☐ Prepare for appropriate communication
- ☐ Arrange for hot-line, if necessary, for employees and families
- ☐ Coordinate activities with public service agencies

NATURAL DISASTERS

In the event of a major natural disaster, the emergency organization should basically remain the same as in a fire situation. However due to natural disasters encompassing the entire region, the Property Crisis Team will be relied on very heavily. It must be remembered that there may no outside emergency services available for some time, such as telephone, power, ambulance or rescue, water, etc., Therefore, the property may be strictly on it's own in handling the emergency for an undetermined amount of time, possibly several hours.

In a major disaster, it may become necessary to set up a temporary hospital or first aid station. This must be in a safe area and cannot be designated until after damage can be assessed. All emergency first aid equipment will be moved to this location and all trained personnel from all departments will be utilized along with employees and/or guest volunteers. Personnel will be requested to respond to the area with blankets, pillows and sheets (which may be used for bandages and slings if necessary).

POWER FAILURE

If for any reason, there is a total power failure at a property, each property is equipped with a back-up system. This system is started within a few seconds of a power failure. It should be noted that all lighting and power systems are not necessarily on this back-up system, but emergency lights and power will be maintained in public areas.

At first sign of power failure, all personnel must be particularly alert for the prevention of injury and crime. Engineering personnel will follow power failure protocol.

Personnel operating equipment using more than 110 volts should shut down equipment until power returns to normal. Heavy motors may burn out due to power fluctuation.

Telephone Operator

☐ Will advise Security and Engineer on Duty of power outage.

Security Dispatcher

☐ Will advise Security Shift Manager and Engineer on Duty of power outage.
☐ Will dispatch a Security Supervisor to meet Engineering to take report of situation.
☐ Officers should be dispatched to locations where money is handled to observe and protect the assets.
☐ Notify Slots, Table Games, restaurants, gift shops, Cages, and soft count room, to protect or secure all money.
☐ Keep communication open with Surveillance Department.
☐ Notify utility company and determine how soon help will be available.
☐ Will contact Surveillance to see if anyone is inside of the elevators. **If so, institute elevator emergency procedures.**

Security

☐ Will contact the Facilities Manager/Vessel Captain.
☐ Inspect all emergency lighting systems to ensure all systems are operational
☐ When dispatched to a money handling facility, will be observant and remain at that location until "all clear" is received.
☐ Inspect all elevator systems to determine if any elevators are stalled with passengers on board, and advise Security Dispatch.
☐ Pits: Close tables.
☐ Cage: Officers are to patrol the cage area to observe for any suspicious activity and to assist guests with any questions they might have.
☐ Soft Count: Consideration should be given to shutting down these operations.

- ☐ Hotel: Officer will maintain a constant patrol of all floors and stairwells to ensure guests are not trapped.
- ☐ Escalators/Main Entrance: Officers should be posted at these locations to assist guests.

Engineering

- ☐ Will immediately determine the cause of the power failure and advise the Telephone Operator/Security Dispatch.
- ☐ Will ensure emergency power is instituted.
- ☐ Will stay in constant communication with the Senior Manager, advising him/her of the facts and information needed to make decisions.

Management

- ☐ Institute plans for control of building, occupants and their needs.
- ☐ Communicate with the utility company to determine the time and duration so that preparations can be made to restart the building systems when power is restored.
- ☐ A Command Post should be created and the Property Crisis Team called to respond, if necessary.
- ☐ Avenues of communication with guests, public and employees should be instituted, with up-to-the-minute information disseminated.

ROBBERY

Cages, vaults, soft count, and pits in the casino are equipped with an approved type of hold-up alarm. These alarms are silent at the location of activation and monitored in-house by the Security and Surveillance Departments.

Cage Personnel

- ☐ Stay calm, give money or meet demands if possible.
- ☐ Take no aggressive action. Do not attempt to stop the robbery or apprehend the perpetrator.
- ☐ Avoid eye contact with the robber(s).
- ☐ Cooperate with the robber(s) and do exactly what they tell you to do.
- ☐ If safe to do so, activate the silent alarm.
- ☐ Secure the area and move to a safe environment. **Do not touch or in any way disturb the area where the crime occurred**.
- ☐ Keep all other employees and/or customers away from the area.
- ☐ Security will notify local law enforcement.
- ☐ Try to remember the physical description, voice, clothing and any other significant characteristics of the robber. Be systematic. Look at him/her from head to foot. Mentally note as many details as you can.
- ☐ Step away from the immediate area of the crime and notify Security Dispatch.
- ☐ When Security arrives, advise if you or anyone is in need of medical assistance.
- ☐ Give all pertinent information to Security concerning the details of the crime and description of the perpetrators.
- ☐ Identify all witnesses to the Security Officer.
- ☐ If the robbery took place at a casino cage, make arrangements to close all windows.

Security Dispatcher

- ☐ Notify the Hammond Police Department at 911
- ☐ Notify the On-Scene Commander
- ☐ Notify surveillance and IGC immediately
- ☐ Refrain from radio use, turn volume down.
- ☐ Monitor escape routes of the offenders for direction of travel
- ☐ When informed of the robbery by phone, immediately determine the following:
  - Location
  - If the robbery still in progress
  - Identify the caller
  - If there are any injuries
  - Direction of escape
  - How many robbers involved
- ☐ The Security Dispatcher will notify Security of the location of the alarm and whether or not the robbery is still in progress.

☐ Security Dispatcher should maintain a log of events as they occur, such as:
- Receipt of call (from whom, what time)
- Robbers' description
- Pertinent radio transmissions
- Time police department was notified
- Time of "all clear"
- Means and direction of escape

☐ If there are any resulting injuries or trauma, the dispatcher should immediately notify Emergency Medical Technician on property.

Security

☐ Isolate the area if the robbery is still in progress.
☐ Notify local law enforcement if actual robbery occurred.
☐ No aggressive action should be taken that will endanger any persons.
☐ If the alarm is found to be false, notify the Security Dispatcher of the fact so an "all clear" can be broadcast.
☐ Security will contact the Property Crisis Team if warranted or instructed by senior management.
☐ Security Supervisor(s) responding to the scene must keep their own safety in mind and obtain pertinent details such as robber description, direction of escape, description of vehicle, weapons, etc. This information should be immediately relayed to the Security Dispatcher for dissemination to law enforcement.
☐ If a Security Investigator is on property they must be called to the scene.
☐ Move everyone away from the area and create a perimeter.
☐ A Security Officer should be posted at the crime scene and not allow anyone without a specific need to enter the area. A log should be maintained of the identities of everyone entering the area.
☐ Once law enforcement officers arrive on the property, cooperate fully and assist in every way possible.
☐ All witnesses (employees and guests) should be identified, separated and interviewed, with a report filed for each witness. Obtain a written statement if possible.
☐ All Security personnel who witnessed the robbery will submit a written report.
☐ Do not allow representatives of the media to photograph or conduct interviews inside the premises. Refer all media inquiries to the appropriate company spokesperson.

Surveillance

☐ When advised that a robbery is in progress or has just ended, the Surveillance Department will:

- Monitor and record all activity at the scene.
- Advise Security as to suspect description, type of weapon(s), vehicle information and direction of escape.

☐ Notify the Surveillance Director

☐ Maintain logs, reports and videotape of the incident for law enforcement authorities.

Property Crisis Team

☐ Set up command center if required

☐ Human Resources PCT rep will arrange counseling or victim services for victims and affected individuals

☐ Make necessary press or other releases.

RUPTURED WATER PIPES / SPRINKLER HEAD

In the event of a ruptured water line or sprinkler head, the following procedures should be followed:

In the Event of Main Water Supply Loss

- ☐ Water District will be so advised by Switchboard/Security Control.
- ☐ Security will monitor rest rooms and ensure they are not being used.
- ☐ Security Manager on duty will monitor the situation.

Security Control

- ☐ Notify Engineers, Maintenance and Security of location of leak and dispatch them to area.
- ☐ Notify senior management.
- ☐ Notify Security Shift Manager.
- ☐ Notify Surveillance to ensure camera coverage of affected area.

Slots

- ☐ Upon notification, Engineers, Maintenance and Security will respond to the affected area.
- ☐ If water is leaking onto and over slot machines, slot personnel will respond to the area.
- ☐ If determined necessary, power will be turned off.
- ☐ If practical, before power is turned off, credits should be noted along with identification of persons playing machines.
- ☐ Plastic sheeting will be place by maintenance and slot personnel over affected slot machines.
- ☐ EVS will be notified to respond with cleanup equipment.
- ☐ If warranted, area will be cordoned off to prevent guests from walking through area.

Pit Area

- ☐ Engineers, Maintenance and Security will respond to the area.
- ☐ Surveillance should be notified.
- ☐ Pit supervisor will decide if tables need to be closed in the affected area, and notify casino dealers as to safekeeping their banks and locking tables
- ☐ Maintenance and EVS will respond to area and either move tables or place plastic sheeting over tables. Buckets should be placed under leaks to minimize damage. "Wet–vac" area as soon as practical to minimize carpet damage.
- ☐ Guests should be advised to take their chips, cash, etc. from the tables.

☐ If needed, area should be cordoned off to prevent guest or employee injury and to prevent traffic from entering area.

Restaurants/Bars

☐ Shift supervisors or Food and Beverage manager on duty will determine if partial or all areas need to be closed.
☐ If so, bartenders and cashiers will be directed as to safe keeping of their banks.
☐ Maintenance will move tables and chairs, or plastic sheeting will be placed over area to help eliminate water damage.
☐ Affected area will be cordoned off to prevent guests moving through the area.

Hotel Room Water Leaks (If applicable)

☐ Engineers and Security will be notified and respond to the affected room(s).
☐ If extensive water leakage, all rooms on lower floors will be checked for additional water damage.
☐ Hotel Manager of Duty will determine and coordinate with guests for any room changes, if needed.
☐ Maintenance will respond with cleanup equipment.

THREATENED SUICIDE

Person discovering the situation

Employees who are made aware of a threatened or attempted suicide should immediately move to a safe location and notify Security.

Security

☐ In the event the officer is made aware of a threatened or attempted suicide, the following procedures should be implemented:
- Attempt to determine the name of the subject
- Attempt to determine if the subject is armed
- Ask subject: "Are you trying to kill yourself?"
- Determine if the subject has done anything to injure himself
- Attempt to determine if the subject is at the casino by himself or with other persons

• Keep in mind that a subject who is seriously considering suicide has emotional problems, is in a state of depression, and believes he/she has exhausted all possible alternatives for living.
- Use extreme caution in approaching such a subject: Understand cover and concealment.
- Never attempt to negotiate face to face if a subject is armed.
- Remain calm, logical and proceed at a slow, deliberate pace

☐ Notify a Security Supervisor as soon as you receive notification.
- Hammond Police Department will be contacted in all cases involving threatened suicide.
- All steps possible should be taken to safeguard the subject. It is the officers' duty to make all reasonable efforts to safeguard the life of a potential suicide subject.

☐ The Security Supervisor will notify the Security Shift Manager on duty. Notifications will be made by the Shift Manager to the following:
- IGC
- Manager of Security
- Shift Manager of Security

☐ The area should be cleared of all persons except Security/Police. Onlookers and curiosity seekers should be kept clear of the area.

☐ Care must be taken to protect the officer and any other persons involved.
- Be aware that a subject who is threatening or has attempted suicide is a very real threat to the officer and any other person involved because of the state of mind of the subject.

☐ Contact with the subject should be immediately initiated. Only one person conducts the negotiations. A second person should be taking notes.
- Certain attitudes should be used when dealing with such a subject.

- Use Active Listening Skills (ALS)
- Assume a gentle, but positive demeanor
- Use a soft, calm, reassuring voice

- When the local Police Department arrives they will assume the responsibilities, and Security Officers will remain to assist in any manner possible. This may mean continuing the negotiations.

☐ An investigator will be called if on duty to compile a report. If one is unavailable then a Security Supervisor will compile the report. Be sure you have all the information needed before you leave the scene of the incident.

- The final disposition of the subject will be determined by the actions of the subject and the decisions reached by the Crisis Management Team if involved in this situation.

TORNADO

A tornado is a violently rotating column of air extending from a thunderstorm to the ground. Tornadoes can occur at any time of the day or night and in any month of the year. Tornadoes usually come from the southwest at speeds of 20-40 mph. However, they have traveled at speeds near 70 mph. The average tornado is on the ground less than 10 minutes and travels a distance of about five miles. The width of the tornado as it touches the ground averages 300 to 400 yards but may be wider. Tornadoes wind speed varies from 100 mph to nearly 300 mph. Tornadoes usually develop from thunderstorms and normally occur at the trailing edge of the storm. Tornadoes do their destructive work through the combined action of their strong rotary winds, flying debris and the partial vacuum in the center.

General

- The activation of the Property Crisis Team and command center may be necessary.
- If enough advance warning is given, the PA system should be activated throughout the complex giving guests and employees the following instructions:

  All:
  This area is under a tornado warning.
  Towers:
  Open all windows and doors approximately ½ inch.
  The bathrooms provide the best shelter should the tornado strike, further information to follow.
  Casino Property:
  Move all patrons to Zones P, N, & D. All non-Security or Marine Operations personnel should move to the hold deck of the casino.
  Pavilion: Move all patrons to the area between JB's and the restrooms. All employees should move to the hallway between the EDR and Security Control.
  Marina Garage: Move all Patrons and employees to Zones P, N, & D in the Casino.
  Marine Operations: Stand by Fire Control Room, Ballast Control System, and Watertight Door Panel.
  Stay away from windows, doors and outside walls. Lie flat on the floor and cover your head.
- After the tornado passes, the same procedures will be followed as outlined in the earthquake section.

Planning Considerations

The following are considerations when planning for tornadoes:

- Ask your local emergency management office about the community's tornado warning system.

    - Tornado Watch – Tornadoes are likely. Be ready to take shelter. Stay tuned to radio and television stations for additional information.
    - Tornado warning – A tornado had been sighted in the area or is indicated by radar. Take shelter immediately.
- Establish procedures to inform personnel when tornado warnings are posted. Consider the need for spotters to be responsible for looking out for approaching storms.
- Work with a structural engineer or architect to designate shelter areas in your facility. Ask your local emergency management office or National Weather Service for guidance.
- Consider the amount of space you will need. Adults require about six square feet of space; nursing home and hospital patients require more.
- The best protection in a tornado is usually an underground area. If an underground area is not available consider:
    - Small interior rooms on the lowest floor and without windows.
    - Hallways on the lowest floor away from doors and windows.
    - Rooms constructed with reinforced concrete, brick or block with no windows and a heavy concrete floor or roof system overhead.
    - Protected areas away from doors and windows.
    - Note: Auditoriums, cafeterias and gymnasiums that are covered with a flat, wide-span roof are not considered safe.

☐ Make plans for evacuating personnel away from lightweight modular offices or mobile home-sized buildings. These structures offer no protection from tornadoes.

EMPLOYEE'S/MANAGER'S/SUPERVISOR'S EVACUATION PLAN CHECKLIST

DEPARTMENT NAME: _____

DATE:_____TIME: _____

TYPE OF EVACUATION ORDERED (circle below):

Types of Evacuations	Definition
Vertical	The movement of personnel up, down or into emergency exits or stairwells.
Horizontal (Isolation)	The movement of personnel across a floor for safe refuge.
Partial	The movement of a limited number of people that may be immediately endangered or the immediate floors above or below the incident.
Total	The total movement of all personnel from the facility to the staging area.

TASK	**ACTION TAKEN**
1. EVACUATE EMPLOYEES/GUESTS	_____
2. EVACUATION LOCATION (STAGING AREA)	_____
3. TAKE EMPLOYEE HEAD COUNT	_____
4. REPORT MISSING PERSONNEL TO SECURITY	_____

SITUATION REPORT	1. Affected Property(s):	2. Date Prepared:	3. Time Prepared:
4. 24 hour Operational Period (Date/Time)			
5. Summarize situation (What do we know: who, what, when, where)			
6. Analysis, significance, forecast of probable future events:			
7. Priority Information Requirements: (What do we need to know)			
8. Approved For Release By (Enterprise Crisis Team Coordinator)			

Instructions for completing this form: This form should be prepared by the corporate Enterprise Crisis Team and disseminated and/or briefed as appropriate. This form is an executive summary of the updated situation. A new form is completed as required when new information is developed, however a new form is completed every 24 hours even if there is no significant change. Ideally, the reported information is:

☐ Verified for accuracy with an independent source
☐Screened for relevance
☐Summarized for executive review
☐Interpreted and analyzed for significance

Crisis Management Forms

Endorsement of the Crisis Management Plan by the Horseshoe Casino

Plan Number _____. I acknowledge that this information is confidential and that I am to store this plan in a safe and secure area.

I have read and understand the Crisis Management Plan as submitted by the Horseshoe Casino to the Indiana Gaming Commission and understand that in an emergency incident my agency, department company or firm has been identified or implied as one that will assist in any emergency incident as needed. I also understand that I am invited at a mutually agreed upon time between my agency, department company or firm and Horseshoe Casino to visit the Horseshoe Casino facilities and provided the opportunity to tour the facility and view the location of emergency equipment that my agency, department company or firm may use during an incident.

Attachment H

Air Quality Analysis Technical Appendices

ATTACHMENT H AIR QUALITY

Introduction

This Air Quality Appendix provides modeling assumptions and backup for results presented in Section 5.5 of the DPIR/DEIR. Included within this documentation is a brief description of the methodology employed along with pertinent calculations and data used in the emissions and dispersion calculations supporting the mesoscale, microscale, and stationary source air quality analyses.

Motor Vehicle Emission Rates (Microscale & Mesoscale)

The EPA MOBILE6.2 computer program generated motor vehicle emissions used in the garage stationary source analysis along with the mobile source CAL3QHC modeling and mesoscale analysis. The model input parameters were provided by MassDEP. Emission rates were derived for 2012 and 2022 for speed limits of 2.5, 10, 15, and 30 mph for use in the microscale analyses. The 10 mph rate was used to estimate parking garage emissions.

Mesoscale Analysis (including Greenhouse Gases)

A mesoscale analysis consists of using link and intersection data to calculate total emissions of NOx, VOC, and GHG over the project transportation study area. All calculations are made using Microsoft Excel and are presented in this appendix.

CAL3QHC (Microscale) Analysis

For the intersections studied, the CAL3QHC model was applied to calculate CO concentrations at sensitive receptor locations using emission rates derived in MOBILE6.2. The intersection's queue links and free flow links were input to the model along with sensitive receptors at all locations nearby each intersection. The meteorological assumptions input into the model were a 1.0 meter per second wind speed, Pasquill-Gifford Class D stability combined with a mixing height of 1,000 meters. For each direction, the full range of wind directions at 10 degree intervals was examined. In addition, a surface roughness (z_0) of 175 cm was used for all intersections. Idle emission rates for queue links were based on 2.5 mph emission rates derived in MOBILE6.2 and converted from grams per mile to grams per hour. Emission rates for speeds of 10, 15, and 30 mph were used for right turn, left turn, and free flow links, respectively.

Stationary Source Emissions

Emissions for the heating combustion units were calculated using the latest DEP emission limits for boilers based on the Boiler Environmental Results Program (ERP). Boiler stack data were obtained from engineering plans, vendor data, and engineering judgment. The emergency generator emissions were calculated based on a g/bhp-hr emission factor provided by vendor information for typical size units. A combination of vendor data and engineering judgment were also used for the

CHP facility. Since final design has not yet been completed, all equipment provided is subject to change.

The hourly emission rates were converted to grams per second and input to the AERMOD model. For the NAAQS analysis, modeling was conducted for CO, SO_2, NOx, PM-10, and PM-2.5.

All assumptions and data used in the stationary source emissions and stack parameter calculations are provided herein.

AERMOD

The EPA AERMOD model was used to calculate air quality impacts due to the installation of heating combustion boilers, emergency generators, CHP, and cooling towers. For non-combustion sources, ambient temperature releases were assumed; otherwise temperatures of the exhaust gas were used. Urban dispersion coefficients were used. Building downwash was accounted for in the modeling based on the building heights and projected widths of the buildings. The maximum modeled impacts from the stack sources were conservatively added to monitored background values for comparison to the NAAQS.

Boiler, Cooling Tower, Emergency Generator, and CHP Exhaust Emissions Calculations

Caesars Resort at Suffolk Downs

For engineer's stack height analysis, model number of units indicated in column C. For MEPA analysis, exclude future units as indicated in column D, except for DHW blrs - model only 1

Heating Boilers

If Option 1 is a problem, duscuss w/Vanderweil before modeling option 2. Taller stacks may be an alternative.

Notes: From 2007-2011 MA DEP Annual Data Summaries

[1] SO_2 reported in ppm or ppb. Converted to $\mu g/m^3$ using factor of 1 ppm = 2600 $\mu g/m^3$.

[2] CO reported in ppm or ppb. Converted to $\mu g/m^3$ using factor of 1 ppm = 1140 $\mu g/m^3$.

[3] NO_2 reported in ppm or ppb. Converted to $\mu g/m^3$ using factor of 1 ppm = 1880 $\mu g/m^3$.

[4] Background level for 24-hour PM-2.5 is the average concentration of the 98th percentile for three years.

[5] Background level for annual PM-2.5 is the average for three years.

[6] Maximum annual 1-hr concentrations.

[7] The 24-hour and Annual standards were revoked by EPA on June 22, 2010, Federal Register 75-119, p. 35520.

[8] The 2010 & 2011 SO_2 3-hr value is not reported. Years 2007-2009 used instead.

Wetland Resource Area Delineation Summary Memo
(on-site)

Wetland Resource Area Delineation Summary Memo

Suffolk Downs Site

Revere & Boston, Massachusetts

January 8, 2013

OVERVIEW

The Suffolk Downs facility is located adjacent to Route 1A in Revere and East Boston, Massachusetts. The vast majority of the site is currently developed with a thoroughbred race track, ancillary facilities and structures, and paved parking lots. The site is bordered to the north by Revere Beach Parkway and residential developments; to the east by Washburn Avenue and a mix of residential and commercial developments; to the south by Waldemar Avenue and residential developments; and to the west by Route 1A and a large fuel storage facility with numerous above ground storage tanks.

On April 24, 25, and 26, and May 3, 2012, wetland and soil scientists from Epsilon Associates, Inc. ("Epsilon") delineated wetlands and other resource areas[1] within an approximately 200 acre study area at the Suffolk Downs facility. The purpose of the delineation effort was to define the extent of wetlands, resource areas and buffer zones regulated under the Massachusetts Wetlands Protection Act (MGL Ch. 131 § 40), Section 401/404 of the U.S. Clean Water Act (33 U.S.C. 1344) and local wetland ordinances in the Cities of Revere and Boston[2].

Refer to the figures provided in Attachment A for a depiction of existing conditions information.

WETLAND DELINEATION METHODOLOGY

The wetland delineation conducted by Epsilon was completed in accordance with the following regulations and guidance documents:

- U.S. Army Corps of Engineers "Wetland Delineation Manual" (1987) and the "Northcentral and Northeast Regional Supplement, Version 2.0" (2012);

---

[1] "Resource Area", as used herein, means any of the areas specified in the Massachusetts Wetlands Protection Act regulations at 310 CMR 10.25 through 10.35 and 310 CMR 10.54 through 10.58. It is used synonymously with Area Subject to Protection Under M.G.L. c. 131, § 40, each one of which is enumerated in 310 CMR 10.02(1).

[2] The City of Boston does not have a Wetlands Protection Ordinance with the exception of a provision for local filing fees.

- Massachusetts Wetlands Protection Act and implementing regulations (310 CMR 10.00);
- Massachusetts Department of Environmental Protection ("MassDEP") wetland delineation guidance document entitled "Delineating Bordering Vegetated Wetlands Under the Massachusetts Wetlands Protection Act" (March 1995); and
- City of Revere Wetland Protection Ordinance (Title 16, Chapter 16.04).

The Corps of Engineers require the presence of three criteria for an area to be classified as a wetland (water of the U.S.)[3]: the presence of wetland hydrology, a predominance of hydrophytic vegetation (>50%), and the presence of hydric soils. The methodology prescribed by MassDEP under the Wetlands Protection Act for Bordering Vegetated Wetlands is similar although it requires the presence of only two criteria: a predominance of hydrophytic vegetation (≥ 50%) and the presence of hydrology (which can include hydric soils as per 310 CMR 10.55). The City of Revere local Ordinance requirements are consistent with the MassDEP criteria.

Intermittent and perennial stream delineations were based on the ordinary high water mark ("OHWM"), as defined by Corps of Engineers regulations and guidance documents. An OHWM is a line on the shore established by the fluctuations of water and indicated by physical characteristics, or by other appropriate means that consider the characteristics of the surrounding areas. See 33 CFR 328.3(e) and applicable Regulatory Guidance Letters. The OHWM identified by Epsilon is generally coincident with the upper boundary of Inland Bank as described under the Wetlands Protection Act regulations at 310 CMR 10.54 and the mean annual high water mark ("MAHW") for determining Riverfront Area under 310 CMR 10.58 and separate lines were determined not to be necessary.

The boundaries of wetlands were delineated in the field by tying brightly colored survey ribbons to woody vegetation or other relatively permanent vegetation. Where such vegetation was not available, wire flags were used. Colored ribbons and/or wire flagging were placed sufficiently close together to clearly identify wetland edges and to allow regulators, and work or survey crews to see adjacent flags from each other. Flags were labeled sequentially using numbers or alpha numeric identifiers.

In support of the proposed delineation, Epsilon evaluated and collected soil, hydrology, and vegetation data along transects across the wetland/upland interface and prepared corresponding Corps of Engineers wetland determination forms. This data is provided in Attachment B.

---

[3] Wetlands means "those area that are inundated or saturated by surface or ground water at a frequency and duration sufficient to support, and that under normal circumstances do support, a prevalence of vegetation typically adapted for life in saturated soil conditions. Wetlands generally include swamps, marshes, bogs and similar areas." 33 C.F.R. § 328.3(b). "Waters of the United States" is broadly defined in the federal regulations that implement the Clean Water Act. It includes tidal waters, rivers, streams, lakes, ponds and wetlands.

WETLANDS & OTHER RESOURCE AREAS

Table 1 on the following page presents a summary of the delineated wetlands and other resource areas and their corresponding jurisdictional status under the Wetlands Protection Act and Revere Wetlands Protection Ordinance. For the purposes of this evaluation it is reasonable to assume that all of the delineated vegetated wetlands and streams located within the study area are jurisdictional "waters of the U.S." as defined under Section 401 and 404 of the U.S. Clean Water Act. The wetland resource areas delineated by Epsilon are located in both Revere and Boston (the municipal boundary bisects the middle of the site). The boundaries of the delineated wetland resource areas and associated buffer zones are depicted on the existing conditions site plan prepared by Nitsch Engineering in Attachment D.

Sales Creek is depicted as a perennial stream on the applicable USGS quadrangle map (see Attachment A). According to 310 CMR 10.58(2)(a)1a, a river or stream shown as perennial on the current USGS or more recent map provided by MassDEP is perennial. Perennial streams (rivers) have a Riverfront Area. The Riverfront Area is the area of land between a river's mean annual high-water line measured horizontally outward from the river and a parallel line located 200 feet away, except that the parallel line is located: 25 feet away in Boston and 25 feet away in densely developed areas, as designated by the Secretary of the Executive Office of Energy and Environmental Affairs pursuant to 301 CMR 10.00 (see 310 CMR 10.58(2)(a)3). On March 12, 1999, Sales Creek and the surrounding environs on the project site were designated as a densely developed area by the Secretary; accordingly the Riverfront Area is also 25 feet in the City of Revere (see Attachment E). Riverfront Area does not have a buffer zone.

According to the applicable FEMA-FIRM maps 25025C0038G and 252025C0019G, a portion of the study area is located within a mapped 100-year floodplain, Zone AE, Base Elevation 9 feet NGVD (15.46 feet Boston City Base). The 100 year floodplain may be classified as Bordering Land Subject to Flooding ("BLSF") (310 CMR 10.57) or Land Subject to Coastal Storm Flowage ("LSCSF") (310 CMR 10.04) depending on site specific conditions and flooding characteristics. No distinction is made herein. Neither BLSF or LSCSF have a 100 foot buffer zone. See attached Figure 2, FEMA Flood Hazard Map.

Two man made stormwater detention/retention basins located in the City of Revere (referred to as Flag Series C and D on Table 1 below) have not been classified as jurisdictional wetland resource areas under the aforementioned regulations because they do not meet the criteria to be regulated as inland wetland resource areas including but not limited to "ponds" and "streams" (see 310 CMR 10.04) comprised of Inland Bank (310 CMR 10.54) and Land Under Water (310 CMR 10.56) or Isolated Land Subject to Flooding (310 CMR 10.57) and BVW (310 CMR 10.55). It is also Epsilon's opinion that the Corps would not likely regulate these areas as waters of the U.S.

The up gradient intermittent stream that flows into the jurisdictional pond located in the center of the race track oval in the City of Boston was also not classified as a jurisdictional wetland resource area per 310 CMR 10.04 (see definition of stream) or water of the U.S. because it appears to be excavated wholly in uplands.

Lastly, the portion of the study area that is associated with Sales Creek is located within the Rumney Marsh Area of Critical Environmental Concern ("ACEC").

See Table 1 on the following page for additional information.

Table 1 Summary of Jurisdictional Wetland Resource Areas under the Wetlands Protection Act and Revere Wetlands Ordinance

	Wetland Resource Areas Within Flag Series					
Wetland Flag Series	Inland Bank	Land Under Water	Bordering Vegetated Wetland	Isolated Land Subject to Flooding	Riverfront Area	Comments
A			•			Flag Series A delineates a detention basin that connects directly to Sales Creek (Series F/FF) via a culvert under Furlong Drive (thus making it a BVW). Series A and Flag Series B/BB are connected via a flood control gate running under an upland berm. This wetland series has a 100 foot buffer zone and is located in the City of Revere.
B/BB	•	•	•			Series B/BB delineates the edge of a linear BVW that borders an intermittent stream. The Inland Bank of the stream was not formally delineated because it exists down gradient of the BVW and is non-descript in certain stretches. This series is connected under Route 1A via a culvert. This wetland series has a 100 foot buffer zone and is located in the City of Revere and the City of Boston.
C	Non Jurisdictional Stormwater Basin					This non-jurisdictional stormwater basin is depicted as an open water body with no wetland flags shown on the enclosed existing conditions plan. It is dominated primarily by common reed *(Phragmites australis)*. The stormwater basin is located in the City of Revere.
D	Non Jurisdictional Stormwater Basin					This non-jurisdictional stormwater basin is depicted as an open water body with no wetland flags shown on the enclosed existing conditions plan. It is dominated primarily by common reed *(Phragmites australis)*. The stormwater basin is located in the City of Revere.
E			•			Flag Series E delineates a small pocket BVW/stormwater feature that is connected to Flag Series F/FF (Sales Creek) via three culverts. This wetland series has a 100 foot buffer zone and is located in the City of Revere.
F/FF	•	•	•		•	Flag Series F/F delineates BVW and the OHWM of Sales Creek (the lines are generally coincident). The 25 foot RFA extends from the OHWM. Inland Bank and LUW were not formally delineated but exist down gradient of the flag series. This wetland series has a 100 foot buffer zone from the BVW edge; the RFA does not have a buffer zone. It is located in the City of Revere.
G/GG			•			Flag Series G/GG delineates a pocket BVW/stormwater feature that is connected via a culvert to Flag Series F/FF. This wetland series has a 100 foot buffer zone and is located in the City of Revere.
H	•	•	•			Flag Series H/HH delineates a Bank and BVW that borders an intermittent stream (drainage ditch); these resource areas are generally coincident throughout. LUW was not formally delineated but it exists down gradient of the flag series. The higher elevation culvert inlet near Route 1A receives drainage from adjacent roads, as does the culvert outlet. Wetland Series H has a 100 foot buffer zone and is located in the City of Boston.
I/II	•	•			•	Flag Series I/II delineate Inland Bank and the OHWM of Sales Creek where it flows aboveground through the study area. The 25 foot RFA extends from the OHWM. This wetland series has a 100 foot buffer zone from the Bank; the RFA does not have a buffer zone. It is located in the City of Revere

	Wetland Resource Areas Within Flag Series					
Wetland Flag Series	Inland Bank	Land Under Water	Bordering Vegetated Wetland	Isolated Land Subject to Flooding	Riverfront Area	Comments
J/JJ	•	•			•	Flag Series J/JJ delineates Inland Bank and the OHWM of Sales Creek where it flows aboveground through the study area. The 25 foot RFA extends from the OHWM. This wetland series has a 100 foot buffer zone from the Bank; the RFA does not have a buffer zone. It is located in the City of Revere.
K/KK	•	•	•			Flag Series K/KK delineates BVW that borders an intermittent stream comprised of Inland Bank and LUW. Select portions of this series also delineate Sales Creek OHWM and its associated 25 foot RFA. This wetland series has a 100 foot buffer zone from the BVW edge; the RFA does not have a buffer zone. It is located in the City of Revere and the City of Boston.
L/LL	•	•	•			Flag Series L/LL delineates BVW that borders an intermittent stream comprised of Inland Bank and LUW. Select portions of this series also delineate Sales Creek OHWM and its associated 25 foot RFA. This wetland series has a 100 foot buffer zone from the BVW edge; the RFA does not have a buffer zone. It is located in the City of Revere.
Pond within Race Track Oval and Upgradient Drainage Ditch	•	•				The open water body located in the center of the race track oval appears to meet the definition of a pond as defined under 310 CMR 10.04.[1] The pond is comprised of Inland Bank and LUW; there is no BVW present. There is a 100 foot buffer zone that extends from the edge of the pond (it was not formally delineated in the field because its boundary is so well defined). The pond is located in the City of Boston. The man made drainage ditch located upgradient of the pond was not classified as a jurisdictional wetland resource area. According to 310 CMR 10.04, such a body of running water which does not flow throughout the year (i.e., which is intermittent) is a stream except for that portion upgradient of all bogs, swamps, wet meadows and marshes.

[1] According to 310 CMR 10.04, "pond" means any open body of fresh water with a surface area observed or recorded within the last ten years of at least 10,000 square feet. Ponds may be either naturally occurring or man-made by impoundment, excavation, or otherwise. Ponds shall contain standing water except for periods of extended drought. Periods of extended drought for purposes of 310 CMR 10.00 shall be those periods, in those specifically identified geographic locations, determined to be at the "Advisory" or more severe drought level by the Massachusetts Drought Management Task Force, as established by the Executive Office of Environmental Affairs and the Massachusetts Emergency Management Agency in 2001, in accordance with the Massachusetts Drought Management Plan (MDMP). Notwithstanding the above, the following man-made bodies of open water shall not be considered ponds: (a) basins or lagoons which are part of wastewater treatment plants; (b) swimming pools or other impervious man-made basins; and (c) individual gravel pits

Hydrophytic Vegetation Indicators:

__ 1 - Rapid Test for Hydrophytic Vegetation

X 2 - Dominance Test is >50%

__ 3 - Prevalence Index is ≤3.0[1]

__ 4 - Morphological Adaptations[1] (Provide supporting data in Remarks or on a separate sheet)

__ Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree – Woody plants 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/shrub – Woody plants less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vines – All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? **Yes** X **No** _____

Remarks: (Include photo numbers here or on a separate sheet.)

SOIL

Sampling Point: B/BBW

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

ACTIVELY MOWED AREA WITH POORLY DEVELOPED SOIL AND BROKEN ASPHALT AND FILL SUBSTRATE.

HYDROLOGY

Wetland Hydrology Indicators:

Primary Indicators (minimum of one is required; check all that apply)

- ___ Surface Water (A1)
- ___ High Water Table (A2)
- ___ Saturation (A3)
- ___ Water Marks (B1)
- ___ Sediment Deposits (B2)
- ___ Drift Deposits (B3)
- ___ Algal Mat or Crust (B4)
- ___ Iron Deposits (B5)
- ___ Inundation Visible on Aerial Imagery (B7)
- ___ Sparsely Vegetated Concave Surface (B8)
- ___ Water-Stained Leaves (B9)
- ___ Aquatic Fauna (B13)
- ___ Marl Deposits (B15)
- ___ Hydrogen Sulfide Odor (C1)
- ___ Oxidized Rhizospheres on Living Roots (C3)
- ___ Presence of Reduced Iron (C4)
- ___ Recent Iron Reduction in Tilled Soils (C6)
- ___ Thin Muck Surface (C7)
- ___ Other (Explain in Remarks)

Secondary Indicators (minimum of two required)

- ___ Surface Soil Cracks (B6)
- ___ Drainage Patterns (B10)
- ___ Moss Trim Lines (B16)
- ___ Dry-Season Water Table (C2)
- ___ Crayfish Burrows (C8)
- ___ Saturation Visible on Aerial Imagery (C9)
- ___ Stunted or Stressed Plants (D1)
- ___ Geomorphic Position (D2)
- ___ Shallow Aquitard (D3)
- ___ Microtopographic Relief (D4)
- ___ FAC-Neutral Test (D5)

Field Observations:

Hydrophytic Vegetation Indicators:

___ 1 - Rapid Test for Hydrophytic Vegetation

___ 2 - Dominance Test is >50%

___ 3 - Prevalence Index is ≤3.0[1]

___ 4 - Morphological Adaptations[1] (Provide supporting data in Remarks or on a separate sheet)

___ Problematic Hydrophytic Vegetation[1] (Explain)

[1]Indicators of hydric soil and wetland hydrology must be present, unless disturbed or problematic.

Definitions of Vegetation Strata:

Tree – Woody plants 3 in. (7.6 cm) or more in diameter at breast height (DBH), regardless of height.

Sapling/shrub – Woody plants less than 3 in. DBH and greater than or equal to 3.28 ft (1 m) tall.

Herb – All herbaceous (non-woody) plants, regardless of size, and woody plants less than 3.28 ft tall.

Woody vines – All woody vines greater than 3.28 ft in height.

Hydrophytic Vegetation Present? Yes _____ No X

Remarks: (Include photo numbers here or on a separate sheet.)

SOIL

Sampling Point: F/FFU

Profile Description: (Describe to the depth needed to document the indicator or confirm the absence of indicators.)

APPROVAL OF THE SECRETARY OF ENVIRONMENTAL AFFAIRS
OF A
DESIGNATION OF A DENSELY DEVELOPED AREA

PROJECT NAME	:Sales Creek Densely Developed Area
PROPONENT MUNICIPALITY	:Revere
PROJECT WATERSHED	:North Coastal
DATE NOTICED IN MONITOR	:February 10, 1999

Pursuant to the Massachusetts Wetlands Protection Act (M.G.L. c. 131 s. 40 as amended by St. 1996 c. 258) and M.G.L. c. 21A s. 2, and the regulations governing the designation of Densely Developed Areas (310 C.M.R. 10.00), I hereby approve the designation of a Densely Developed Area (DDA) in the municipality of Revere, as described below.

The DDA comprises an area of Revere bounded generally on the west by Lee Burbank Highway, on the north by Revere Beach Parkway and Standish Road, on the east by Bennington Street, and on the south by Diner Road (a private way through Suffolk Downs). In particular, the approved DDA boundary runs as follows: from the conjunction of the northwesterly bank of Sales Creek and Lee Burbank Highway (Route 1A), and running along the northerly bank of Sales Creek to the fork in Sales Creek, thence along the northerly bank of the north fork and under Revere Beach Parkway, thence north of Revere Beach Parkway and south of Standish Road until the conjunction of the north branch of Sales Creek and Bennington Road south of Standish Road; and from the conjunction of the southwesterly bank of Sales Creek and Lee Burbank Highway along the southerly bank of Sales Creek to the fork in Sales Creek, thence along the south fork of Sales Creek, under Tomasello Road, and under the Suffolk Downs Race Track along the

Printed on Recycled Stock, 20% Post Consumer Waste.

Revere DDA Approval March 12, 1999

Revere/Boston corporate boundary, to its conjunction with Bennington Road.

I find that the petition submitted by the City of Revere meets the designation standards found at 310 C.M.R. 10.05. The total area proposed to be designated as densely developed is slightly more than 50 acres. According to the petition, approximately 31 acres of that area are in industrial and commercial use, and 20 acres are in residential use. The whole of the area is within the 200 foot riverfront area. With several isolated exceptions, the area is utilized intensively by commercial, industrial, and residential uses or by underutilized but disturbed land. Most of the underdeveloped land is composed of fill, much of it covered by invasive, nuisance vegetation.

The DDA petition area is a well conceived proposal in keeping with the letter and spirit of the DDA regulations. The DDA petition resulted in several comment letters to me in favor of the petition, and several letters raising concerns about the petition and offering solutions to problems that could follow the DDA designation. Specifically, I refer the City of Revere to the comment letters from the Department of Environmental Management, the Office of Coastal Zone Management, and the Metropolitan Area Planning Council for guidance on how the City and future developers can repair existing damage to Sales Creek and avoid or mitigate potential future impacts. I anticipate that the designation of the DDA will serve to focus new development in an already disturbed and densely developed area, where density of development makes environmentally more sustainable transportation options (such as transit or vanpooling) more feasible.

In accordance with the DDA regulations, the designation described above takes effect immediately.

ARCHITECTURAL DESCRIPTION

Describe architectural, structural and landscape features and evaluate in terms of other areas within the community.

Suffolk Downs is situated on 161 acres of land in the East Boston neighborhood of Boston and within the City of Revere. The race track facility is bounded on the east by the MBTA subway line which includes the Suffolk Downs train station at the property's southeast corner. Tomasello Way and an oil tank facility form the western boundary of the site. The property is bounded to the north by Revere Beach Parkway and Winthrop Avenue and to the south by Waldemar Avenue and residential properties. The Suffolk Downs property encompasses the racetrack, connected clubhouse and grandstand, administration building, barns, and ancillary support buildings.

Surface parking is situated on the western side of the site on both sides of Tomasello Way. Now referred to as the office building, the two-story steel frame concrete clad former administration building is situated on the east side of Tomasello Way. Surrounded by surface parking, the administration building is nine-bays long (east and west elevations) and five-bays wide (north and south elevations). The first floor of the east elevation projects out one bay off the façade, and a central projecting rectangular bay extends out of the center of the second floor of the west elevation. All window openings within the building have been completely or partially infilled with concrete block and largely contain one-over-one double hung sash. The building exhibits significant areas of spalled concrete and deteriorated paint. The flat roof of the building collapsed during a heavy rainstorm in late 2012 and is now vacant, with considerable water damage.

The north side of the site contains approximately 30 wood frame barns, several sheds and ancillary buildings, and jockey quarters. The barns are aligned in two rows of parallel buildings separated by a central lane running east west. The barn area is separated from the surface parking by a drainage ditch to the southeast carrying Sales Creek from Chelsea Creek to the Belle Isle Marsh. The barn area is separated from the racetrack by a curved barn structure (date unknown). Most of the barns are long, one-story wood frame structures clad in wide horizontal clapboard siding with single leaf board and batten doors at each stall. The roofs of the barns extend past the walls creating covered walkway along each side of the building. A one-story wood frame maintenance building (date unknown) is situated between the barns and the grandstand just west of the race track. A small, one-story concrete sewer pump station is located just north of the grandstand.

The one-mile long oval race track is located on the east side of the site. The dirt track is bounded by a wood rail fence and the infield is primarily covered in grass. A grass track is situated immediately inside the dirt track and is defined on both sides by a wood rail fence. A portion of the former half-mile harness racing track (1962) is still visible in the infield. Also located in the infield is a portion of Sales Creek, a pond, and the tote board which faces the grandstand. Several trees and shrubs are also located throughout the infield.

Near the center of the property is the connected clubhouse and grandstand. Originally two separate structures, the buildings were connected in 1962 through an expansion of the grandstand. The smaller clubhouse is at the south end of the complex while the grandstand and its later addition is situated at the north end. Although somewhat altered from its original design, the landscaped entrance court on the west side of the clubhouse remains. The area is now laid out with pedestrian walkways and grassy areas bounded with trees and shrubs.

Constructed in 1935, the clubhouse was designed in the Art Deco style. The present day west elevation is a reconstruction of the original elevation following removal of the 1962 International Style addition. The east side of the building reflects its original design from 1935, its 1953 modifications, and the 1962 International Style renovation. The east elevation is accessed from a wide, elevated landing set atop several concrete steps. The original clubhouse section (south end) contains a southern bay with punched window openings at the second and third stories, and a tower with a single bay of punched window openings adjacent to a three-bay wide façade to the north. Wide expanses of doors at the first floor and windows at the second and third levels are separated by wide concrete clad piers. To the north is a slightly recessed, three-story bay with wide rectangular window openings. The elevation then steps forward one bay with the south elevation being a solid concrete wall and the east elevation defined by a ground level entrance and two levels of windows above. All windows are aluminum sash designed to appear as steel sash similar in character to what was present in 1935. The south elevation of the clubhouse is utilitarian in design containing a return bay of punched window openings on the west side. The elevation is then set forward one return bay (solid concrete wall), and contains three levels of completely or partially infilled window openings. At the elevation's eastern end, the glass enclosed viewing platforms at the second and third floor stories are visible. The east elevation contains three stories of tall windows separated by vertical steel mullions. The windows are set atop long ribbons of concrete wall at the second and third stories. The flat roof is accentuated by a narrow ribbon of concrete. The interior is predominately finished with modern furred out walls, drop ceilings, and carpeting.

The existing grandstand building was constructed in two building campaigns: 1935 and 1962. The building retains architectural elements of both building periods. The ca.1962 walking ring remains on the east side of the building situated between the grandstand and the race track. The west is a long solid concrete elevation with three elevated entrances accessed by Art Deco-style rounded staircases. A former first-story entrance has been infilled with vertical board siding at each staircase, and each second story entrance door is situated atop a monumental staircase and beneath a canvas awning. A one-story concrete entrance pavilion projects off the west elevation between two sets of stairs at the north end of the elevation. The one-story, flat roofed addition contains large storefront windows and doors on all elevations. At the southern end of the elevation is a slightly pitched concrete and steel enclosed walkway that begins at the corner tower and extends to just south of the southernmost entrance stairs. Due to the sloping floor of the grandstands, the solid concrete rear (west) wall of the grandstands projects above the roof of the main block. The south elevation of the grandstand has been faced with a three-story Art Deco façade similar in character and proportion to the west elevation of the adjoining clubhouse. The north elevation features the return bay of glazing set atop a solid concrete base. The east elevation of the grandstand exhibits the structural steel I-beams at regular intervals along the elevation. The first floor contains aluminum and glass storefront systems at the north and central sections and recessed wood and glass walls at the southern end. The entire upper seating area has large windows that operate via a vertical lift system. A rooftop addition is situated on the roof overlooking the finish line. The one-story section has a

continuous row of ribbon windows and two upper level penthouses. The first floor of the grandstand features exposed concrete columns and the underside the grandstand seating. The grandstand seating area has modern finishes with exposed roof and exterior steel framing overlooking the track.

HISTORICAL NARRATIVE

Explain historical development of the area. Discuss how this relates to the historical development of the community.

Historical Development of Suffolk Downs

Situated in the cities of Boston and Revere, Suffolk Downs is constructed upon former marshland. Located immediately northeast of the former Breeds Island (also referred to as Breeds Hill and Orient Heights), the filled land was bounded on the northwest by the Boston and Maine Railroad and to the southeast by the Boston, Revere Beach and Lynn Railroad, both of which connected the then island of East Boston with Revere and Chelsea in the late nineteenth century. The Belle Isle Inlet and other small channels crossed the site in a generally east-west direction. The inlet connected Chelsea Creek to the west and Sales Creek to the north with Boston Harbor to the east. In ca. 1890, the Boston Land Company filled the former marsh to prepare the area for development, which had already begun on Breeds Island. When the land was filled, culverts and a drainage ditch were constructed within the site to carry water from Sales Creek through the site in a southeast direction to Belle Isle Inlet. Although streets were planned for the filled land, no development took place, and in 1911 the land was sold to the East Boston Company. Residential development commenced around the filled land, and in 1935 construction of the Suffolk Downs Race Track was undertaken by the Eastern Racing Commission.

Horse racing was a popular sport and pastime in America at the turn of the twentieth century. In the Boston area, horse racing, including harness racing, was taking place in neighborhoods around the City on race tracks from Franklin Field in Roxbury to the banks of the Charles River in Allston. Thoroughbred racing began in America in the 1868 with the creation of the American Stud Book that profiled all thoroughbreds born in America. By 1890 there were 314 tracks operating in the United States. In 1894, the American Jockey Club was formed. Most states banned gambling on horses due to illegal bookmaking practices until 1908 when pari-mutuel betting was introduced. The betting system pooled all wagers, removed the taxes and house take, and paid off winnings based on odds calculated among all winning bets. The newly sanctioned system allowed for the creation of Suffolk Downs.

In 1934, the Commonwealth of Massachusetts created the State Racing Commission which legalized pari-mutuel wagering. That same year, Charles F. Adams commissioned engineer Mark Linenthal to design a race track for the East Boston site. The contracting firm of A.G. Tomasello & Son won the $2 million construction contract and completed the job in about three months. Mark Linenthal (1886-1976) was born in Boston, MA. He completed his studies in civil engineering at the Graduate School of Applied Science at Harvard University. Linenthal was a member of the Boston Society of Civil Engineers, and by 1917, he was married to his wife Anna, had two children, and was working as an engineer with the firm of Monks and Johnson in Boston. In 1919, Linenthal was in a partnership of Gascoigne & Linenthal on Tremont Street in Boston. Eventually, he entered into his own practice and was responsible for not only the design of Suffolk Downs but also Narragansett Park, a horseracing track in Pawtucket, Rhode Island, the Roosevelt Raceway in Westbury, Long

Island, New York, the renovation of Salem, New Hampshire's horseracing track known as Rockingham Park, the greyhound racing track Raynham Park in Raynham, MA, and the baseball park McCoy Stadium in Pawtucket, RI designed with Thomas Harding. The Constitution Wharf – Quincy Mark Cold Storage Building in Boston's North End and the Garment Center Building on Kneeland Street in Boston are also attributed to Linenthal.

The original Suffolk Downs included the one-mile long race track, two-story judges' stand, grandstand, clubhouse, administration building, horse paddock, an equipment shed, sewer pump house, approximately 30 horse barns, and a jockey building. The judges' stand, clubhouse, grandstand and administration buildings were all steel frame and concrete structures designed in the Art Deco style while the paddock and barns were utilitarian, wood frame structures. The equipment shed and sewer pump house were both concrete and wood frame buildings. The grounds included a ceremonial circular driveway in front of the clubhouse, a parade ring between the paddock and the grandstand, three rows of trees planted in the grassed forecourt of the grandstand, and extensive parking areas to the north and south of the grandstand and clubhouse.

In 1939, the small free-standing steel frame photo-finish booth situated on the roof of the grandstand was fully enclosed in a new concrete penthouse. In that same year, the judges' stand, located at the edge of the track near the south end of the grandstand, received a new roof, but by 1942, the stand was demolished. In 1945, a new 14x14-foot reviewing stand was added to the roof. These modifications were all designed by Mark Linenthal. The next major renovation to the facility was in 1953. Following plans prepared by A.R. Barnes, the former open air third level of the clubhouse overlooking the track was enclosed. The roof of the main block of the building was extended over the outside deck to create a new indoor kitchen, dining room, and betting area.

Between 1962 and 1965, a major transformation of the facility was undertaken following plans developed by Linenthal & Becker, a later Linenthal partnership. A substantial addition was constructed between the clubhouse and grandstand. The International Style addition added two-stories to the front façade of the clubhouse, enclosed the former walkway between the clubhouse and the grandstand, and connected the new clubhouse addition to the grandstand via a long sloping enclosed walkway. A clubhouse addition featured a four-bay monumental entrance defined by a four-vaulted canopy. The entrances were defined by large expanses of glass. The first story, which appeared as two stories from the exterior due its double height, contained punched window openings within the brick façade while the second floor was accentuated by a continuous row of ribbon windows. The concrete sloping walkway to the grandstand extended from the new entryway addition across the former open walkway to the grandstand. Enclosed in glazed panels, the walkway connected the first floor of the new clubhouse addition with the second floor of the grandstand.

On the east side of the clubhouse, the first and second floor concrete decks were enclosed with ribbon windows and doors during the 1962-1965 renovation. The grandstand was expanded to enclose the former walkway between the two buildings, and the entire grandstand enclosed in movable glass walls. The steel and glass walls operated vertically and could be opened and closed with a mechanical lift system. The original paddock building was removed at this time. A 14-stall paddock was constructed below the grandstand and a walking ring was created on the track side of the grandstand. A new half-mile harness racing oval was constructed inside the original track. The forecourt at west elevation was paved for parking.

A number of interior renovations occurred in the ensuing years including the installation of an escalator between the first and second floors of the grandstand in 1965, and the demolition of the box seats in the grandstand to provide more open seats in 1969. In 1972, the administration building underwent an interior renovation. In 1982, a fire destroyed one of the barns, and several were re-sided and renovated. In 1991, the 1962 clubhouse addition was removed and the original west elevation was restored following plans by architect Olsen Lewis. The infill between the clubhouse and the grandstand was retained, and a new south elevation and corner tower were constructed in the same Art Deco architectural character as the original clubhouse building. A portion of the sloped walkway was retained and connected the new corner tower to the second floor of the grandstand. While the west elevation of the clubhouse was restored, the grandstand seating area was renovated, new bathrooms and flooring installed and the interior and exterior of the building was repainted. In 1993, a new broadcast signal center was also added on the interior of the grandstand. Since the 1990s, little alteration to Suffolk Downs has been undertaken. In late 2012, the roof of the administration building collapsed. As a result, the building has suffered severe structural and water damage and is vacant. The building has been condemned and is scheduled to be demolished.

Ownership and Operations of Suffolk Downs

The original owner and developer of Suffolk Downs was Charles F. Adams who was also the founder and president of the Boston Bruins, the city's professional ice hockey team. The track opened on July 10, 1935 to a crowd of 35,000. In its first day of wagering, Suffolk Downs took in $425,546. The first Massachusetts Handicap was run at Suffolk Downs on October 16, 1935. Known as the "MassCap," the race is limited to thoroughbred horses, ages three years and up. In 1936, Suffolk Downs installed photography equipment to capture images of the finish line. In that same year, Seabiscuit wins a race at Suffolk Downs and is seen for the first time by future trainer Tom Smith. Seabiscuit returns a year later, trained by Smith and ridden by jockey Johnny "Red" Pollard, to win the 1937 MassCap and a purse of $50,000, propelling him to national stardom.

Racing at Suffolk Downs continued during World War II. Due to gas rationing, the track was groomed by draft horses pulling the plows during the War. In 1945, the operation of the track was entrusted to Aldred Investment Trust under its president Allen Wilson. Despite bringing in its highest average attendance between 1945 and 1947, Suffolk Downs was sold at public auction in May of 1946, and was purchased by importer and judge John C. Pappas for $3,600,000.

During the 1950s, other events in addition to horse racing were programmed for the track including several boxing matches set up on the east side of the grandstands. In 1959, harness racing was introduced on the one-mile track. In 1962, a smaller half-mile track was created inside the original track for this purpose. The 1960s renovation added 100,000 square feet to the clubhouse and grandstand at a cost of $1,500,000. In 1964, New York businessman David Harber purchased John Pappas' 300,000 shares of stock for $2.9 million. Although Harber was now the owner of Suffolk Downs, Pappas remained the track's director. In 1966, the Beatles made their final appearance in Boston to a crowd of over 25,000 at Suffolk Downs.

In 1968, Realty Equities Corporation, a firm that purchased mainly hotel and theater chains, acquired Suffolk Downs for $12 million and made Bill Veeck, a former owner of several major league baseball teams, as the president and chief operating officer. Under Veeck's leadership, chariot races and livestock giveaways were added to the yearly roster. Unfortunately, during the 1970s, horse racing fell out of fashion. Many tracks around the country were closing. In an attempt to improve attendance, tracks, including Suffolk Downs, introduced a new wagering system of perfectas and trifectas, which allowed betting on first, second, and third place finishes. Just three years after taking ownership, Realty Equities Corporation sold Suffolk Downs to James F. Edwards, the president of National Raceways, Inc.

The track quickly changed hands again and in 1972 was owned by Ogden Recreation, Inc., a subsidiary of the New York-based Ogden Corporation. Placed under the direction of William F. Connell, Suffolk Downs expanded its racing to 150 days and eventually to 200 days per year. In 1986, Belle Isle Limited purchased the track for $21 million. The managing partner was Edward "Buddy" LeRoux, a former owner of the Boston Red Sox, but the track closed after declining revenues in 1989. It reopened in 1992 after Sterling Suffolk Racecourse LLC, led by Chairman James B. Moseley and President John L. Hall II, leased the property from Belle Isle Limited for $3.5 million per year. During this period, the $5 million demolition and renovation of the clubhouse was undertaken. In 1995, the MassCap was reinstituted, resulting in successive appearances by two of the greatest horses in racing history, Cigar in 1995 and '96 and Skip Away in 1997 and '98.

In 1997, Sterling Suffolk Racecourse LLC purchased the track from Belle Isle Limited. Although the track was advertised for development for other uses, it remained in operation and hosted a variety of non-horse racing events. During the late 1990s and 2000s, Suffolk Downs hosted a number of music concerts, the Phantom Gourmet's Hot Dog Safari, and Cirque du Soleil. In 2007, after a two-year hiatus, the MassCap returned to Suffolk Downs to its largest crowd, 19,191, since 1996. Today, Suffolk Downs continues its horse racing activities.

Appendix A: Drawing List for Model Construction

1. INTRODUCTION

A pedestrian wind study was conducted on the proposed Resort at Suffolk Downs project located in Boston, Massachusetts. The objective of the study was to assess the effect of the proposed development on local conditions in pedestrian areas around the study site and provide recommendations for minimizing adverse effects.

The study involved wind simulations on a 1:400 scale model of the proposed building and surroundings. These simulations were then conducted in RWDI's boundary-layer wind tunnel at Guelph, Ontario, for the purpose of quantifying local wind speed conditions and comparing to appropriate criteria for gauging wind comfort in pedestrian areas. A list of the drawings used for the construction of the model can be found in Appendix A. The criteria recommended by the Boston Redevelopment Authority (BRA) were used in this study. The present report describes the methods and presents the results of the wind tunnel simulations.

2. OVERVIEW

Major buildings, especially those that protrude above their surroundings, often cause increased local wind speeds at the pedestrian level. Typically, wind speeds increase with elevation above the ground surface, and taller buildings intercept these faster winds and deflect them down to the pedestrian level. The funneling of wind through gaps between buildings and the acceleration of wind around corners of buildings may also cause increases in wind speed. Conversely, if a building is surrounded by others of equivalent height, it may be protected from the prevailing upper-level winds, resulting in no significant changes to the local pedestrian-level wind environment. The most effective way to assess potential pedestrian-level wind impacts around a proposed new building is to conduct scale model tests in a wind tunnel.

The consideration of wind in planning outdoor activity areas is important since high winds in an area tend to deter pedestrian use. For example, winds should be light or relatively light in areas where people would be sitting, such as outdoor cafes or playgrounds. For bus stops and other locations where people would be standing, somewhat higher winds can be tolerated. For frequently used sidewalks, where people are primarily walking, stronger winds are acceptable. For infrequently used areas, the wind comfort criteria can be relaxed even further. The actual effects of wind can range from pedestrian inconvenience, due to the blowing of dust and other loose material in a moderate breeze, to severe difficulty with walking due to the wind forces on the pedestrian.

3. METHODOLOGY

Information concerning the site and surroundings was derived from: site photographs; information on surrounding buildings and terrain; site plans and elevations of the proposed development provided by the design team. The following configurations were simulated:

No Build Configuration: includes all existing surrounding buildings;

Build Configuration: includes the proposed Resort at Suffolk Downs and all existing surroundings.

As shown in Figures 1a and 1b, the wind tunnel model included the proposed development and all relevant surrounding buildings and topography within a 1600 ft radius of the study site. The mean speed profile and turbulence of the natural wind approaching the modelled area were also simulated in RWDI's boundary layer wind tunnel. The scale model was equipped with 82 specially designed wind speed sensors that were connected to the wind tunnel's data acquisition system to record the mean and fluctuating components of wind speed at a full-scale height of 5 feet above grade in pedestrian areas throughout the study site. Wind speeds were measured for 36 wind directions, in 10 degree increments, starting from true north. The measurements at each sensor location were recorded in the form of ratios of local mean and gust speeds to the reference wind speed in the free stream above the model. The results were then combined with long-term meteorological data, recorded during the years 1982 to 2011 at Boston's Logan International Airport, in order to predict full scale wind conditions. The analysis was performed separately for each of the four seasons and for the entire year.

Figures 2a, 2b and 2c present "wind roses", summarizing the annual and seasonal wind climates in the Boston area, based on the data from the Logan International Airport. The left side wind rose in Figure 2a, for example summarizes the spring (March, April, and May) wind data. In general, the prevailing winds at this time of year are from the west-northwest, northwest, west, southwest and east. On an annual basis (Figure 2c) the most common wind directions are those between southwest and northwest.

This study involved state-of-the-art measurement and analysis techniques to predict wind conditions at the study site. Nevertheless, some uncertainty remains in predicting wind comfort, and this must be kept in mind. For example, the sensation of comfort among individuals can be quite variable. Variations in age, individual health, clothing, and other human factors can change a particular response of an individual. The comfort limits used in this report represent an average for the total population. Also, unforeseen changes in the project area, such as the construction or removal of buildings, can affect the conditions experienced at the site. Finally, the prediction of wind speeds is necessarily a statistical procedure. The wind speeds reported are for the frequency of occurrence stated (one percent of the time). Higher wind speeds will occur but on a less frequent basis.

4. PEDESTRIAN WIND COMFORT CRITERIA

The BRA has adopted two standards for assessing the relative wind comfort of pedestrians. First, the BRA wind design guidance criterion states that an effective gust velocity (hourly mean wind speed +1.5 times the root-mean-square wind speed) of 31 mph should not be exceeded more than one percent of the time. The second set of criteria used by the BRA to determine the acceptability of specific locations is

based on the work of Melbourne[1]. This set of criteria is used to determine the relative level of pedestrian wind comfort for activities such as sitting, standing, or walking. The criteria are expressed in terms of benchmarks for the 1-hour mean wind speed exceeded 1% of the time (i.e., the 99-percentile mean wind speed). They are as follows:

Table 1: BRA Mean Wind Criteria*

Dangerous	> 27 mph
Uncomfortable for Walking	> 19 and ≤ 27 mph
Comfortable for Walking	> 15 and ≤ 19 mph
Comfortable for Standing	> 12 and ≤ 15 mph
Comfortable for Sitting	< 12 mph

* Applicable to the hourly mean wind speed exceeded one percent of the time.

The wind climate found in a typical downtown location in Boston is generally comfortable for the pedestrian use of sidewalks and thoroughfares and meets the BRA effective gust velocity criterion of 31 mph. However, without any mitigation measures, this wind climate is likely to be frequently uncomfortable for more passive activities such as sitting.

5. TEST RESULTS

Table 1 presents the mean and effective gust wind speeds for each season as well as annually. Figures 3a through 4b graphically depict the wind comfort conditions at each wind measurement location based on the annual winds. Typically the summer and fall winds tend to be more comfortable than the annual winds while the winter and spring winds are less comfortable than the annual winds. The following summary of pedestrian wind comfort is based on the annual winds for each configuration tested.

The majority of the existing site was confirmed to have acceptable conditions with respect to pedestrian safety with the exception of one area to the south of the existing casino and grandstand structure. These unsafe wind conditions will be effectively mitigated with the addition of the proposed development.

5.1 No Build Configuration

5.1.1 Existing Casino Area (Sensors 21-24, 43-54 and 68-75)

A trend of increasing wind speeds to the west of the grandstand is evident in Figure 3a. This trend is evidence of the sheltering effect of the existing grandstand structure. The area adjacent to the grandstand is appropriate for sitting (Sensors 24, 45, 47, 50 and 53). Further west from the grandstand conditions are appropriate for standing (Sensors 44 and 51). Still further back, towards the existing parking areas, conditions are appropriate for walking (Sensors 21-23, 43, 46, 48, 49, 52 and 54).

[1] Melbourne, W.H., 1978, "Criteria for Environmental Wind Conditions", Journal of Industrial Aerodynamics, 3 (1978) 241 - 249.

Along the horse track some shelter is provided by the casino to the west, thus conditions appropriate for walking exist (Sensors 71, 73, 75 and 76). However, to the north of the casino, which is less sheltered from the prevailing easterly and westerly winds, conditions are currently uncomfortable (Sensors 68 and 69).

5.1.2 Other Areas (Sensors 1 – 20, 25-42, 55-67, 76 and 77)

A wind comfort categorization of walking is considered appropriate for sidewalks. The sidewalks along Tomasello Drive and within the existing residential area to the southwest of the existing casino site are predominantly comfortable for walking. One segment of Tomasello Drive to the west of the casino currently experiences uncomfortable wind conditions due to the exposure to the prevailing westerly winds (Sensors 40, 57-59 and 63).

As shown in Figure 3a, the proposed casino area was found to be mainly uncomfortable with the eastern portion being comfortable only for walking (Sensors 1, 2, 4 and 6).

Elevated wind conditions, suitable for walking at best, are currently observed for much of the site to the north and south of the existing casino due to the exposed nature of the site (Sensors 13, 14, 16-20, 41, 42, 55, 56, 59-62 and 65-69).

5.2 Build Configuration

5.2.1 Casino Entrance and Water Feature Area (Locations 1 through 11)

The shelter provided by the proposed casino is expected to significantly improve the wind conditions over the site, with many of the previously uncomfortable wind conditions predicted to be comfortable for walking or better. The highly sheltered entrance area to the casino is predicted to be comfortable for sitting (Sensors 1-3, 5 and 6). The areas adjacent to the entrance are expected to be comfortable for standing (Sensors 4, 7 and 11), which is appropriate for the pedestrian traffic in these areas. The water feature to the west of the casino is located in an area where walking conditions are expected. If a fountain is to be placed in the water feature the potential for fountain dispersion and its impact on pedestrians should be considered.

5.2.2 North and South Plazas (Locations 21 through 24, 43 through 54)

As shown in Figure 3b, the north and south plaza areas will be suitable for walking or better annually, with the majority of locations suitable for standing or sitting. The north and south extents of the plaza will have conditions appropriate for standing (Sensors 21, 22, 46 and 50-54). The increased sheltering in the central plaza areas will result in conditions appropriate for sitting, which corresponds well with the planned park benches and cafes in these areas (Sensors 43 and 47-49). Slightly increased wind conditions will occur in the narrow section between the north and south plazas as a result of wind channeling between the adjacent structures. However, conditions appropriate for walking are anticipated which is appropriate for the pedestrian usage of this area (Sensors 24, 44 and 45).

5.2.3 Other Onsite Areas (Locations 12 – 20, 34, 35, 41, 42, 55, 56, 59-62, 65-82)

The majority of other onsite areas near buildings, including secondary building entrances, will have conditions appropriate for the intended pedestrian usages. However, two areas are expected to remain uncomfortable for walking. These include the area to the south of the existing casino, which currently exhibits unsafe wind conditions (Location 20) and on the top of the proposed parking garage (Locations 80 and 81). While the area around sensor 20 remains uncomfortable, the conditions are expected to be improved from the conditions currently experienced in this area. It should also be noted that this area currently does not pass the criteria used to assess pedestrian safety. The proposed development will effectively mitigate these unsafe conditions. There is dense landscaping in the area, which should be retained or enhanced for wind reduction. Sensors 80 and 81 are on the top of the proposed garage. If frequent pedestrian use is anticipated, porous windscreens placed around the perimeter of the upper parking lot would reduce pedestrian discomfort at these locations.

5.2.4 Offsite Areas (Locations 25 through 33, 36-40, 57, 58, 63, 64)

The construction of the proposed casino and surrounding facilities is expected to reduce the speed of wind in most immediate surrounding areas. Further, it is not expected that the addition of the proposed development will have a significant negative effect in any of the surrounding areas. The most notable improvement is anticipated along Tomasello Drive just southeast of the shopping plaza (Sensors 57, 58 and 63). Wind speeds at Location 26 increases by 1 mph on an annual basis with the proposed development in place, resulting in uncomfortable wind conditions. The existing dense trees along the road, which were not modeled in the wind tunnel tests, would reduce the wind activity in this area to a comfortable level. The other areas will remain in the same wind comfort category.

6. APPLICABILITY OF RESULTS

The results presented in this report pertain to the model of the proposed Resort at Suffolk Downs development constructed using the architectural design drawings listed in Appendix A. Should there be any design changes that deviate from this list of drawings, the results presented may change. Therefore, if changes in the design are made, it is recommended that RWDI be contacted and requested to review their potential effects on wind conditions.

APPENDIX A

APPENDIX A: DRAWING LIST FOR MODEL CONSTRUCTION

The drawings and information listed below were received from Elkus Manfredi Architects and were used to construct the scale model of the proposed Resort at Suffolk Downs. Should there be any design changes that deviate from this list of drawings, the results may change. Therefore, if changes in the design are made, it is recommended that RWDI be contacted and requested to review their potential effects on wind conditions.

Attachment L

Draft Construction Management Plan

ATTACHMENT L DRAFT CONSTRUCTION MANAGEMENT PLAN

This draft Construction Management Plan (CMP) addresses construction sequencing, staging plans, material deliveries, and specific mitigation measures intended to avoid and minimize impacts from the Project. As Project design progresses, protection measures will be added and modified as appropriate. A CMP will be submitted to the Boston Transportation Department for approval prior to commencement of construction, and the Developer's general contractor will be bound by the operational parameters described herein.

For on-site construction, the Developer and construction team will coordinate CMPs with the cities of Boston and Revere and applicable state agencies and authorities, as appropriate.

1. Construction Methodology

This section describes the construction schedule and the methods that will be used for staging, site access, public safety, and erosion and sediment control.

1.1 Construction Activity Schedule

Project construction is expected to take up to 60 months. Weekend, extended hours and 2nd/3rd shift activities will require an off-hours permit jointly issued by the Inspectional Services Department and Boston Transportation Department (BTD), and will be performed in a manner that will minimize impacts as may be necessary to meet permitting restrictions. The general contractor will also need to perform some activities, such as materials unloading, during off hours; deliveries of large construction equipment (e.g., cranes, excavation equipment) will be scheduled to avoid and/or minimize impacts to vehicular, pedestrian traffic and noise generated from the site.

Within the site, activities such as excavation, pile driving, and steel erection will also be prohibited during these hours. Every two weeks, the contractor will publish an updated schedule of upcoming work and will disseminate the schedule to affected parties in local neighborhoods. In addition, the general contractor will publish monthly schedule updates describing progress as well as projected activity for the next month. This information will be available on a Project website which will allow neighbors real-time access to the most up-to-date construction information.

1.2 Construction Staging and Truck Deliveries

The proposed staging plan is designed to isolate construction activities while providing safe access for pedestrians and automobiles during normal daily activities as well as emergencies. All adjacent streets will remain open to the public during construction.

Construction storage and staging will remain within the fenced construction fence enclosure. This boundary will be enclosed with a six-foot-high chain link fence with privacy screening. Plans illustrating construction phasing and staging on the Project site will be provided to and subject to review and approval by BTD prior to the commencement of any Work on the Property.

All construction delivery trucks will enter the site from Route 1A at Tomasello Drive, and will not be allowed to park or idle on neighborhood streets. Major deliveries such as steel or large pieces of mechanical equipment will be staged on-site. Specific language regarding staging locations and the prohibition of staging materials in neighborhood streets will be called out in all subcontracts. While it is not anticipated that any off-site staging or marshalling areas will be used, the locations of any and all staging and marshalling areas will be forwarded to the BTD and the City of Revere for review and approval. Truck wheel wash stations will be located and used at all site exits to ensure that soil materials are not tracked onto roadways from the site. During all site work activities, construction laborers will maintain adjacent streets and sidewalks to prevent accumulation of dirt and dust. Mechanical sweeping, and at the City's sole discretion, vacuum sweeping, will be used continuously during the excavation, foundation, and site work phases of the project to maintain adjacent roadways.

1.3 Perimeter Protection and Public Safety

Proper signage will direct pedestrians, vehicles and bicyclists safely around the site and construction activities.

The general contractor will work to minimize impacts to both pedestrian, bicycle and vehicular flow. Specific configurations of staging and pedestrian access around the site will vary depending on the phase of work being performed (see attached construction phasing plans). These configurations will ensure safe egress to and from the existing racetrack facilities during operation. As pedestrian, bicycle and vehicular access changes with the progression of construction, all changes will be submitted to BTD and the City of Revere for their review and approval prior to implementation. Fire department access as well as access to the fire hose connection will be continuously maintained at all times as shown in the attached construction phasing plans.

In general, secured fencing will isolate construction areas from pedestrian traffic within the site. Police details will be provided as needed to facilitate traffic flow both on and off the project site. In addition, sidewalk areas and walkways near construction activities will be protected, well marked, and lighted to ensure pedestrian safety. The general contractor will provide sufficient temporary site lighting to ensure the safety of all pedestrians accessing the site until permanent street lighting is installed. Construction safety procedures will be designed to meet all OSHA safety standards for specific site construction activities.

All subcontractors will be required to wear appropriate personal protective equipment, and each subcontractor will implement and manage its own Safety and Health Program for the project. These programs will be reviewed by the general contractor's field staff and safety department, which will also monitor compliance. This program will ensure that subcontractors' employees, subcontractors, and suppliers, regardless of tier, know and understand the complete safety and health requirements of the project.

Snow removal and ice treatment will occur in a timely manner and will be provided on the surrounding City sidewalks. Trash removal and debris cleanup will be performed on a continuous basis throughout the entire construction process. Construction-period way finding and directional signage will be provided and updated as necessary during construction.

1.4 Erosion Control, Dewatering and Mitigation

The Developer will prepare a Stormwater Pollution Prevention Plan (SWPPP) and submit a Notice of Intent to the U.S. EPA for coverage under EPA's NPDES Construction General Permit (CGP). The SWPPP will detail methods for preventing soil erosion and pollution of downstream receiving waters due to stormwater runoff from construction zones, and will be a "living" document to be revised as construction phasing dictates. The SWPPP will include both structural and non-structural BMPs to be used during construction, and will require site inspections in accordance with the CGP during all periods when ground surfaces remain un-stabilized. Locations for materials stockpiles, construction staging, construction trailers, and equipment storage will be identified.

Construction-period erosion and sediment controls will include the non-structural and structural BMPs described below. These controls will be designed, installed, and maintained in accordance with the SWPPP as well as the following documents:

- "Storm Water Management for Construction Activities, Developing Pollution Prevention Plans and Best Management Practices" (EPA 832-R92-005, Sept. 1992);
- "Storm Water Management for Construction Activities, Developing Pollution Prevention Plans and Best Management Practices – Summary Guidance" (EPA 833-R92-001, Oct. 1992);
- Massachusetts Stormwater Management Policy Handbook (Volume I) and Technical Handbook (Volume II) issued by the Massachusetts Department of Environmental Protection, March 1997; and
- Massachusetts Erosion and Sediment Control Guidelines for Urban and Suburban Areas, A Guide for Planners, Designers and Municipal Officials, March 1997.

Stormwater management for the post-construction, operational phase of the Resort is described in Section 9.3.2.

Non-Structural Controls

One of the most important methods of preventing soil erosion and sedimentation associated with stormwater runoff is to minimize the amount and duration of non-stabilized surfaces. Maintaining an efficient construction sequence that minimizes the size of disturbed areas reduces the exposure of non-stabilized surfaces to the erosive effects of stormwater. As with the SWPPP, the CMP will require contractors to minimize areas of disturbance. The thoughtful siting of storage and stockpile areas away from downstream receptors will also help prevent sedimentation from stormwater runoff.

On-site storage of hazardous materials or toxic chemicals will be limited to what is absolutely necessary. Where necessary, these materials will be stored off the ground and in enclosed or covered structures to prevent contact with stormwater runoff.

Daily street sweeping (or more frequent street sweeping as needed) of construction areas and surrounding streets and sidewalks will be required throughout construction to control fugitive dust emissions and to remove sediments tracked off site where they could otherwise by washed into surface waters, wetland resource areas, or the municipal stormwater management system, on a schedule approved by BTD. Permanent stabilization of exposed surfaces will be required within seven days of the completion of work in any given area. In instances when it may not possible to permanently stabilize exposed soils within seven days of work completion, or when soils will be exposed for 14 days or longer without work occurring, temporary stabilization of surfaces will be required. This temporary stabilization will be achieved by seeding with quickly-germinating grasses or the use of erosion control blankets.

Structural Practices

In addition to the non-structural controls discussed above, many construction-period structural BMPs will be required to prevent pollution from stormwater runoff. Appropriate perimeter controls such as silt socks, straw wattles, and compost berms will be installed to filter and slow stormwater runoff as it leaves the construction site. To prevent the import of invasive species and weed seeds, hay bales will not be used for erosion and sedimentation control in the Project. In accordance with the SWPPP, these perimeter controls will be inspected every seven days. Sediment build-up behind perimeter controls will be removed when it reaches one-half the height of the controls, and controls will be repaired or replaced as needed.

To prevent the tracking of sediments beyond the construction site, stabilized construction exits of crushed stone will be installed. All construction traffic will be directed over these exits when leaving the site to remove soils from vehicle tires. Construction exits will be inspected weekly in accordance with the SWPPP, and will be repaired or replaced as necessary when sediment builds up on the surface or crushed stone is displaced. Appropriately-sized concrete truck wash-out basins will be installed in locations to prevent

contact with stormwater runoff. These basins will be cleaned as needed, and concrete materials will be disposed of in accordance with applicable local, state, and federal regulations.

New and existing inlets to stormwater management systems will be protected against sediment inflow. Catch basins will be fitted with filter inserts or will be surrounding by silt socks or other materials to filter incoming stormwater. The stormwater management systems will be constructed starting at the downstream end, and no flows will be directed to permanent stormwater BMPs prior to their completion and upstream surface stabilization.

Where larger site disturbances are necessary to accommodate particular construction activities, various measures will be implemented to prevent sediment-laden runoff from leaving the Project site. Where long, exposed slopes are required, temporary check dams will be constructed to reduce runoff velocities and promote less erosive sheet flow. These check dams may be earthen berms, straw wattles, compost berms, or other appropriate systems of slowing runoff velocities and promoting sediment removal. Temporary sediment basins will be constructed where necessary to allow sediments to drop out of suspension prior to discharge and promote construction-period infiltration to groundwater. Disturbed surfaces will be temporarily graded towards these basins, or temporary diversion swales will be built to direct flows to these basins. Basin outlets will be constructed to promote low-velocity sheet flow and will be directed towards existing vegetated areas for further treatment.

2. Construction Air Quality

Construction operations at the site, including earthwork, will generate dust. All demolition and construction work will be performed in accordance with applicable sections of the MassDEP Air Pollution Control Regulations at 310 CMR 7.02 and 310 CMR 7.09. Specific air quality mitigation measures will be as follows:

- Use of appropriately designed construction entrances and wheel wash facilities at all construction exists by all vehicles that would otherwise track mud or dirt onto public roadways to prevent off-site migration of soils;
- Mechanical street sweeping, and at the City's sole discretion, vacuum sweeping, of construction areas and surrounding streets and sidewalks;
- Encapsulation of demolition sites as necessary where hazardous materials such as asbestos or lead paint are identified;
- Removal of demolition and construction waste in covered or enclosed trailers;
- Wetting of exposed soils and stockpiles to prevent dust generation;
- Minimizing stockpiling of materials on site;

- Turning off construction equipment when not in use, complying with all idling limitations in applicable law and regulations and minimizing idling times;
- Minimizing the storage of demolition and construction wastes on site; and
- Minimizing the duration that soils are left exposed.

Many of these measures are intended to minimize potential impacts associated with construction activities that may generate fugitive dust, which will result in localized increases in airborne particulate levels. Fugitive dust emissions from construction activities will depend on such factors as the properties of the emitting surfaces (e.g., moisture content and volume of spoils), meteorological variables, and construction practices employed.

Although fugitive dust may be generated during demolition and construction activities, the distance to off-site receptors makes it unlikely that the migration of dust will cause off-site impacts. Nonetheless, the contractor will implement dust control measures during active demolition and construction that will primarily consist of using wetting agents regularly to control and suppress dust that may come from the structure being demolished or the construction materials. The contractor will comply with the National Emission Standards for Hazardous Pollutants (NESHAP) throughout renovation, demolition, and construction activities. The proposed redevelopment also includes on-site processing and reuse of brick and concrete, which will involve use of an on-site crusher. Appropriate notifications 30 days prior to any crushing will be performed, including notifying local officials and MassDEP in accordance with 310 CMR 16.05(3)(e)6. At no time shall fugitive dust be allowed to migrate beyond the immediate work zone. Dust mitigation during processing will include the use of water sprayers.

Site preparations involving construction haul roads, soil stockpiles, and vehicles exiting the Project site have the greatest potential to create fugitive dust. Soil excavation does not typically generate dust, however, due to the natural moisture content of subsurface soils. As necessary, haul roads will be routinely misted to suppress dust generation. Soil stockpiles can either be covered or vegetated, depending on how long the stockpile will remain. Dust from construction traffic exiting the Project site onto public roads will be controlled with the use of wheel wash stations and vehicle tracking pads, which remove soil from the tires of construction vehicles. Paved construction entrances will also be routinely swept by street sweepers to remove accumulated soils. At no time will visible soils be permitted on public streets that could result in fugitive dust issues.

In addition, the Developer acknowledges the importance of emission controls and will require contractors to comply with MassDEP's Diesel Retrofit Program and the use of ultra low sulfur diesel in off-road engines. The Diesel Retrofit Program, formerly called the Clear Air Construction Initiative of the Clean Construction Equipment Initiative, originated as an

air quality mitigation measure for the Central Artery/Tunnel Project. The program was designed to encourage users of diesel construction equipment to install exhaust emission controls such as oxidation catalysts or particulate filters on their diesel engines.

Construction vehicles will be required to comply with all applicable laws and regulations regarding engine idling, and shall minimize any such idling. The approved construction contractor(s) will be required to use equipment fitted with diesel oxidation catalysts (DOC) or diesel particulate filters (DPF) to reduce emissions. DOCs can reduce fine PM by 25 percent, toxic carbon monoxide by 60 percent and smog-forming volatile organic compounds by 60 percent. DPFs can reduce fine PM by 85 percent or more, as well as smaller reductions in carbon monoxide and VOCs.

A construction air quality dust and emissions mitigation plan will be developed before construction begins and enforceable measures will be executed in the construction contracts.

Indoor air quality will be evaluated and tested by the Project environmental consultant, as appropriate, in buildings that are to remain or be renovated. The need for protective measures such as vapor barriers will be determined during final design. The potential for methane migration (from organic deposits) will be assessed by the Project environmental consultant during final design.

3. Construction Period Noise

Predicted sound levels from construction within the proposed Project site are not anticipated to cause a significant noise impact and are expected to meet the relevant City of Boston daytime construction noise criteria at all noise-sensitive locations.

Construction will require the use of equipment that will be heard off-site, but background ambient noise conditions in the area, including urban activities and traffic, will lessen the impacts from construction noise. In addition, the Developer is committed to mitigate noise impacts related to the construction activities. A noise analysis performed for the Project to quantify the expected noise level associated with different construction activities and has been provided to BTD and the City of Revere.

The proposed construction process has been designed around site constraints, and the exact pieces of equipment will be finalized after subcontractor selection is complete.

Every reasonable effort will be made to minimize the noise impact of construction activities. Mitigation measures will be as follows:

- Scheduling work during daytime hours. If extended hours, weekend or $2^{nd}/3^{rd}$ shift work is proposed, it will be coordinated with BTD and the City of Revere. During any such extended hours, weekend or $2^{nd}/3^{rd}$ shift work, all back up alarms on vehicles shall be disengaged and manual traffic controls will be used.

- Using appropriate mufflers on all equipment and providing ongoing maintenance of intake and exhaust mufflers.
- Maintaining muffler enclosures on continuously operating equipment, such as air compressors and welding generators.
- Replacing specific construction operations by less noisy ones where feasible and practical.
- Selecting the quietest practicable equipment (e.g., electric instead of diesel-powered equipment).
- Selecting equipment operations to keep average noise levels low, to synchronize the noisiest activities with times of highest ambient noise levels, and to maintain relatively uniform noise levels.
- Turning off idle equipment.
- Securing any decking on roadways so that there is no rattling when traffic passes over.
- Using vehicles and equipment with either ambient-sensitive or manually adjustable back-up alarms.
- The proper sizing of impact equipment such as hoe rams, pile drivers and jackhammers and powering only to the degree needed to perform the work.
- The installation of noise suppression enclosures on hoe rams.
- The placement of stationary noise producing equipment such as pumps and generators as far away as possible from residential and sensitive receptor locations.
- Keeping engine housing panels on all equipment closed; and when not in use, shutting off equipment.

4. Construction Schedule

The Project will be constructed in one continuous phase. Staging plans will be provided to BTD for review and approval prior to the commencement of any Work on the Property. The precise details of such staging will be set forth in the final CMP as approved for the Project but in all events shall require that all construction staging will be sequenced such that all construction staging and construction worker parking will be provided on the Property.

5. Construction Traffic Impacts

The number of workers required during construction will vary by period of construction and level of activity. Because the workforce will arrive prior to peak traffic periods, these trips are not expected to impact traffic conditions. In addition, the general contractor will encourage jobsite personnel to utilize public transportation such as by providing personnel with subsidized MBTA passes or shuttle services. Personal vehicles will be allowed to park within designated areas at the Project construction site at no cost, and no construction or personal vehicle parking will be allowed in adjacent neighborhoods. The general contractor shall develop a parking plan for BTD's review and approval, which shall include the general contractor's plans and protocols for enforcing the prohibition on construction personnel parking personal vehicles on streets in the adjacent neighborhood. Terms and conditions to maximize protection of the neighborhoods related to workforce parking will be written into each subcontract and reviewed with each worker during a mandatory orientation. Terms and conditions encouraging public transportation use will be included in each subcontract.

Truck traffic will vary throughout the construction period, depending on the activities being performed. It is expected that truck traffic will average 15-20 trucks daily spread evenly throughout the day.

Specific truck routes will be identified and described to BTD and the City of Revere, and will be clearly delineated on site logistics drawings, for BTD and the City of Revere's review and approval. Construction contracts will include clauses restricting truck travel to BTD- and Revere-approved routes. Unless a specific exception is approved by BTD and the City of Revere, the Developer shall require all construction vehicles to access the Project site from Route 1A at Tomasello Drive. Wheel wash stations and anti-tracking stone pads, which will be at least 50 feet long and consist of a four-inch-thick layer of crushed stone placed over a non-woven filter fabric, will be placed at each access point to the work area. Wheel wash stations will remain in place until the completion of construction and anti-tracking stone pads will remain in place until the work area is paved or otherwise stabilized.

Off-site traffic improvements will require close coordination with the cities of Boston and Revere as well as certain state agencies. The general contractor will develop a construction-period traffic management plan for review and approval by the cities and state. Signage, traffic cones, drums, and other traffic control measures will be employed during construction to provide positive guidance for traffic near the work zone.

6. Dewatering and Groundwater

Should dewatering become necessary during demolition, installation of utilities, or construction of building foundations, appropriate BMPs will be implemented to prevent pollution of downstream receptors. Temporary construction dewatering will likely be

required locally for various excavations, and intermittent pumping will be used as needed to allow for construction in-the-dry. Effluent generated during temporary construction dewatering will be infiltrated into the ground where possible. Groundwater testing will be conducted during dewatering operations as appropriate to determine the type and degree of contamination present and to evaluate and implement appropriate measures to manage groundwater associated with Project excavation and construction, including use of a fractionation tank(s) and adherence to the requirements of temporary construction dewatering permits, as appropriate.

7. Material Handling

The Project includes the demolition of existing buildings, paved driveways, parking lots, sidewalks, and various utilities that will generate large volumes of waste products. Based on available information, a portion of the demolition waste includes hazardous materials such as asbestos, minor amounts of materials containing low levels of polychlorinated biphenyls (PCBs), and lead paint. In addition, due to the scale of the Project, a large amount of general construction waste is also expected. The sections below detail how hazardous and non-hazardous solid wastes will be handled during demolition and construction. The Developer is targeting a 75% reduction in construction debris.

7.1 Solid Waste and Recycling

Proposed construction, demolition, and remediation activities will generate solid waste, including certain regulated building waste streams (e.g., asbestos-containing materials, PCBs, and oil/hazardous materials). The general contractor will take an active role in the processing and recycling of construction waste. The disposal contract will include specific requirements to ensure that procedures allow for the necessary segregation, reprocessing, reuse, and recycling of materials. For those materials that cannot be recycled, solid waste will be transported in covered trucks to an approved solid waste facility per MassDEP Regulations for Solid Waste Facilities, 310 CMR 16.00. Brick, concrete, gypsum wallboard, wood and metal will be segregated from other construction debris for recycling, with the other debris to be disposed of as non-banned construction waste in accordance with waste facility management regulations at 310 CMR 19.017.

Demolition of the administration building, electrical building, and portions of the existing grandstand and link buildings will generate asphalt, brick and concrete (ABC) debris. ABC that is not coated, impregnated, or otherwise treated will be crushed and reused on site without MassDEP pre-approval, provided that MassDEP and the municipalities are notified in advance. However, for ABC that is painted, coated, impregnated, or otherwise treated, the contractor will submit a Beneficial Use Determination (BUD) Application to MassDEP for approval before those materials are crushed and reused on site. The application will be supported by documentation demonstrating that the material will be beneficially used on site and that use of the material will not result in a significant risk to health or the environment and will not increase the overall level of contamination at the site.

7.2 Hazardous Waste

Releases of oil or hazardous material to the environment are managed under the MCP (M.G.L. Chapter 21E and 310 CMR 40.0000) under the supervision of an LSP. The Project includes demolition and reconstruction as part of site redevelopment. [*Customary background information regarding Project environmental matters to be addressed in final CMP*].

An LSP has been engaged by Developer to provide environmental consulting services during Project design and construction. If contamination is identified in pre-construction sampling or during construction, an LSP will provide services consistent with the MCP as required for regulatory compliance and close-out. The Project environmental consultant will ensure that the Project conforms to MCP regulatory requirements for construction of buildings in contaminated areas, and that all required submittals will be provided to MassDEP.

The presence of PCBs in the caulking of buildings constructed between 1950 and 1980 has recently become public knowledge. There are minor amounts of PCB-containing materials on the Project site, specifically the caulking used to seal some of the windows. PCB-containing material is also common in items such as florescent light fixtures. A building assessment of the existing buildings has been completed quantifying the demolition debris that requires special disposal conditions. Non-hazardous waste landfills in Massachusetts landfills are permitted to accept PCB-containing materials where concentrations are less than 2 mg/kg; such disposal does not require approval from the EPA.

The site is also regulated under asbestos abatement regulations (310 CMR 4.00), and asbestos-containing materials are known to exist on the Project site. Asbestos is classified as a "special waste" under MassDEP solid waste regulations, and asbestos and asbestos-containing material require special handling and transporting methods set out in MassDEP regulations. Asbestos-containing material surveys and abatement plans will be developed for each building prior to demolition. Asbestos can only be disposed of in landfills that have been approved to accept asbestos-containing waste materials. Any entity or individual engaged at the site for asbestos abatement or containment shall be licensed and certified under 453 CMR 6.00.

The Project involves the demolition of existing buildings, paved driveways, parking lots, sidewalks, and various utilities including portions of existing water mains and sewer mains. Based on available information, a portion of the demolition waste will include hazardous materials such as asbestos and lead-based paint. These materials are classified as "special waste" under MassDEP solid waste regulations. Accordingly, asbestos, asbestos-containing material, and materials with lead-based paint will be segregated and Project operations will proceed in accordance with the required special handling and transporting methods set out in MassDEP regulations.

Based on a February 14, 2007 Phase I/Phase II Environmental Site Assessment report completed by GEI Consultants, an on-site inspection for asbestos-containing building materials and lead-based paint was conducted by Smith & Wessel of Merrimac, Massachusetts in select buildings on the Project site. Materials that tested positive for asbestos included floor tile and paper, wall and ceiling panels, insulation, window glazing compound, and door caulking. It is unclear whether the existing grandstand roof contains asbestos. It is also noted that some painted surfaces contain lead-based paint.

Surveys and abatement plans related to asbestos-containing material, PCB-containing material, and lead-based paint will be required for each building prior to demolition. Asbestos, PCBs, and lead-based paint will be disposed of in accordance with MassDEP regulations at landfills that have been approved to accept these materials. Any entity or individual engaged at the site for asbestos, lead-based paint, or PCB abatement or containment shall be licensed and certified under 453 CMR 6.00.

Construction operations at the site, including earthwork, will generate dust. As required on construction projects, the Contract Documents will specify the requirements for dust control and include the site-specific Contractor Health & Safety Plans to protect worker safety. If required, dust will be suppressed by spraying the site with water, and air quality will be measured with dust monitors.

Based on existing information, one active UST exists on site. The existing UST is a 7,000-gallon partitioned gasoline and fuel oil tank located near the northwest corner of the existing building. During construction, the existing UST will be removed and a new UST will be installed near the proposed new maintenance building. The Project LSP will ensure that tank removal and closeout is completed in accordance with the MCP and requirements for the city of Revere. In addition, previously unknown USTs encountered during construction will be managed similarly, as needed.

8. Draft Spill Response Plan

Small quantities of hazardous materials or chemicals may be utilized on site, including petroleum/fuel products. Any such materials will be handled and stored in accordance with all applicable regulatory requirements. In the event of an unplanned release of petroleum/fuel products or other contaminants, the general contractor and its subcontractors will utilize the following procedures:

1. Notify Fire Department and contracted spill response contractor;
2. Notify the U.S. Army Corps of Engineers;
3. Mobile excavating equipment will come to the spill/release area and if necessary, create berms, dig channels or cover effected area with soil to reduce spreading or migration;

4. The general contractor will maintain a spill kit on site containing absorbent materials that will be positioned near fueling areas and utilized in the event of spill or release;

5. The general contractor and its subcontractors will reduce the probability of an unplanned spill or release by having fuels delivered by truck to a designated fueling area rather than bulk storage and/or tanks of petroleum/fuel products or other contaminants;

6. Fire extinguishers will be positioned adjacent to fueling areas;

7. No hot work, smoking or potential ignition sources will be allowed in the fueling areas;

8. Personnel involved with fueling or handling of any contaminant will be equipped with communication devices to sound an alarm in the event of spill or unplanned release;

9. Only authorized personnel will be allowed in the spill release area; and

10. The general contractor and its subcontractors will provide assistance as necessary to the qualified spill response contractor and fire department.

9. Geotechnical Impacts and Monitoring

Excavation will be required for the deep foundations (precast piles and/or steel piles), drilled elements such as micropiles, and PIFs proposed in the Project design. Means and methods for installing the deep foundation system will consider potential impacts to abutting facilities that will remain within the property limits (e.g., the grandstand). It is not expected that vibrations will approach thresholds that could potentially impact existing facilities; nonetheless, vibration monitoring will be conducted during pile driving activities. In addition, the Project team will conduct a full existing conditions survey of existing structures prior to commencement of construction, with follow-up on completion.

10. Rodent Control

To control rodent infestation, the City enforces requirements established under the Massachusetts State Sanitary Code, Chapter 11, 105 CMR 410.550 and the State Building Code, Section 108.6. Policy Number 87-4 (City of Boston), which require the extermination of rodents for issuance of permits for demolition, excavation, foundation and basement rehabilitation.

A rodent control program will be developed for the Project prior to commencement of construction and submitted to the City for its review and approval. The program will include performing extermination and control procedures on a bi-weekly basis and placing tamper-resistant bait boxes around the site perimeter.

11. Utilities

New infrastructure for sewer, drainage, domestic water, fire protection water, telephone, gas, and electric services will be tied into existing infrastructure. Specific traffic management plans will be developed for the work required to perform these tie-ins. Connections to the existing services will be coordinated with the proper utilities and their respective contractors, as necessary. All shutdowns will be arranged with affected parties and proper notice will be given prior to any shutdowns. Any and all work requiring a BTD Permit will be approved in writing by the general contractor at the time of permit application. The written approval of the general contractor will be presented to BTD by the contractor performing the work at the time of application of permit to BTD.

12. Damage to Public Property

The Contractor will be responsible for repairing any damage to public streets, public sidewalks, or other public property resulting from its construction activities.

13. Emergency Contacts

A 24-hour emergency contact list will be distributed to all parties involved in the Project. This list shall contain at least three (3) representatives for the Contractor. A 24-hour complaint hotline telephone number shall be provided and will be visibly posted on Project site signage subject to the approval of BTD, including on a Project sign visible from Route 1A. This hotline shall be staffed appropriately to ensure that a caller is allowed to speak to a person as opposed to leaving a message. Logs of all complaints and how/when the complaints were resolved will be kept on-site.
