## Summary of Significant Findings

## Population - Age and Race

- Boston's population increased by 14,858 to 589,141 - a $2.6 \%$ increase - joining New York City as the only two older northern and mid-western cities to show growth over two decades.
- Changes in racial patterns in the Boston population over the decade of the 1990s showed that Boston finally reached the "minority as majority" status. Minorities now comprise over 50 percent ( $50.5 \%$ ) of total residents. Whites continued to decline as nearly 40,000 less were recorded in 2000 over 1990. The fastest growing racial groups were the Asians ( $+14,000$ or +47 percent) and Hispanics ( $+23,000$ or +37 percent). Within the Asians the largest growing groups were the Vietnamese, Chinese, Asian Indian, and Korean groups. Within the Hispanics the fastest growing groups were the Central and South American with a small but fast-growing Mexican community.
- Boston continues to be a city of young adults as shown in the Census data due to the large numbers of students and young adults living and working in the city. One out of every three persons in Boston ( $33.1 \%$ ) is between 20 and 34 years old.
- Boston showed a growth in the baby-boomer population aged 35 to 54 years as that cohort aged and still showed a preference for city living, growing by $19.9 \%$.
- The city saw a general decline in the elderly population, aged 65 and over, as that segment declined by nearly 5,000 people or $7.0 \%$. However, the frail elderly, those over the age of 85 increased and those in the 75 to 85 year cohort remained about the same. It was the newly elderly aged 60 to 64 and 65 to 74 years that showed declines.
- Boston showed a general rise in children as the population aged less than 18 increased by over 6,700 persons or $6.1 \%$. The gains in youth were centered in the population aged 5 to 18 as the increase in births from the early 1980s through the mid-1990s affected the total. The under age 5 age group showed a fall reflecting the drop-off of births in the mid- and late1990s following growth in the previous fifteen years.

## Families and Households

- The trend toward fewer families - related people living together - and more non-families single persons and roommates - continued in Boston in the 1990s. There was a trend toward more "non-traditional" families as the data showed more relatives and non-relatives other than the householder and spouse living in families.
- Overall, the total number of households rose. Single person households continued to grow. Families with children under 18 also grew although married couples with young children fell because of the continued trend toward single-parent families with children. Children over 18 living with their families showed an upward trend as college students commuted at a greater pace and as the cost of housing kept older children at home longer.
- Group quarters population continued to increase both for the institutionalized and noninstitutionalized populations, the vast majority of which is the student dormitory population.
- Household size has only fallen by $2.5 \%$, going from 2.37 persons to 2.31 despite the large growth in single person households. Average family size only edged marginally lower from 3.19 to 3.17 persons.
- The extremely hot housing market of 2000 is reflected in the vacancy rate at $4.9 \%$ and, when taking out seasonal or occasional units plus units being repaired or renovated, the rates are $3 \%$ for rental and $1 \%$ for owner units. This says that the vacancy rate was just a "frictional" rate or only allowing for the normal movement of people into and out of homes.
- The small growth in housing units built during the decade $(1,072)$ shows that the builders' response to a tightening housing market was minimal. The recession of 1988-1992 cooled down the market for housing and it did not heat up again until the late 1990s. The supply response did not occur until 1998-2000 and many of these units being built did not appear as completed yet on the Census address rolls until mid- or late-2000 and were likely not yet ready when the Census was taken.
- Building permit data for new housing units authorized showed 3,610 in the 1990s but this increase did not show in the Census for several reasons - 1,900 of these units were started in 1998 and 1999 and may not have yet been completed, demolitions and abandonment numbers are not available but definitely would have lowered the new supply numbers, and some of the total supply such as BHA projects at Mission Hill Extension and Orchard Park were not counted.
- Good news shows that the owner-occupied units continued its climb as the owner-occupied percentage went to $32.2 \%$ from $30.9 \%$ in 1990. Clearly the City's efforts to increase homeownership are working.
- Household size has stabilized. The 2.37 average in 1990 only declined to 2.31 in 2000. Owner-occupied household size was declining from 2.64 to 2.51 because condominium units added have less persons per unit. Average household size of renter-occupied units fell marginally from 2.25 to 2.22 reflecting a tenant concern with housing cost and maybe larger immigrant population with larger households.

## Detailed Findings

## Population - Age and Sex

- Boston's total population grew by $2.6 \%$ in the 1990 s coming on the heels of a $2.0 \%$ rise in the 1980s, marking an increase for the second consecutive decade, and showing that Boston's urban resurgence is real and growing stronger.

Table 1. Population - Age and Sex

|  | 1990 | 2000 | Number Change | Percent Change |
| :---: | :---: | :---: | :---: | :---: |
| Total Population | 574,283 | 589,141 | 14,858 | 2.6\% |
| Male | 275,972 | 283,588 | 7,616 | 2.8\% |
| Female | 298,311 | 305,553 | 7,242 | 2.4\% |
| Age |  |  |  |  |
| Under 5 Years | 36,601 | 32,046 | $(4,555)$ | -12.4\% |
| 5 to 9 years | 30,084 | 33,721 | 3,637 | 12.1\% |
| 10 to 14 years | 26,626 | 32,552 | 5,926 | 22.3\% |
| 15 to 19 years | 40,757 | 43,631 | 2,874 | 7.1\% |
| 20 to 24 years | 76,213 | 70,084 | $(6,129)$ | -8.0\% |
| 25 to 34 years | 132,364 | 124,762 | $(7,602)$ | -5.7\% |
| 35 to 44 years | 78,159 | 86,420 | 8,261 | 10.6\% |
| 45 to 54 years | 46,916 | 63,554 | 16,638 | 35.5\% |
| 55 to 59 years | 19,638 | 22,746 | 3,108 | 15.8\% |
| 60 to 64 years | 20,975 | 18,288 | $(2,687)$ | -12.8\% |
| 65 to 74 years | 35,832 | 31,154 | $(4,678)$ | -13.1\% |
| 75 to 84 years | 21,899 | 21,675 | (224) | -1.0\% |
| 85 years and over | 8,219 | 8,507 | 288 | 3.5\% |
| Median age | 30.3 | 31.1 |  |  |
| Under 18 years | 109,833 | 116,559 | 6,726 | 6.1\% |
| 18 years and over | 464,450 | 472,582 | 8,132 | 1.8\% |
| Male | 220,432 | 224,078 | 3,646 | 1.7\% |
| Female | 244,018 | 248,504 | 4,486 | 1.8\% |
| 21 years and over | 424,670 | 432,815 | 8,145 | 1.9\% |
| 62 years and over | 78,389 | 71,847 | $(6,542)$ | -8.3\% |
| 65 years and over | 65,950 | 61,336 | $(4,614)$ | -7.0\% |
| Male | 24,052 | 23,435 | (617) | -2.6\% |
| Female | 41,898 | 37,901 | $(3,997)$ | -9.5\% |

- Boston's baby boom age group, those born between 1946 and 1964 were aged 36 to 54 in the year 2000 and highlight the increase in Boston's age cohorts of 35 to 44 and 45 to 54 years of
age. In fact, these cohorts grew by $10.6 \%$ and by $35.5 \%$ during the decade while the cohort after, the 55 to 59 year old range also grew by $15.8 \%$.
- Boston's X-Generation population, those following the baby boomers and born between 1965 and 1980, the so called "baby bust" era, were in the 20 to 24 and 25 to 34 age groupings and showed a predictable decline in population over the decade, falling by 6 to 8 percent.
- The mini "echo-boom" population, or the surge in children born between 1980 and 1995, shows up in population growth of the categories of 5 to 9,10 to 14 , and 15 to 19 years of age, charting rises of $12.1 \%, 22.3 \%$, and $7.1 \%$ respectively. This is also reflected in the growth of children attending elementary and secondary schools.
- The newborn and preschooler population of 0-5 year-olds shows a decline of $12.4 \%$ as also reflected in the decline in birth numbers over the mid-1990s.
- Boston's elderly population generally shows a trend of declining population as the cohorts of 60 to 64 , and 65 to 74 show losses, each of about $13 \%$. The older seniors of 75 to 84 show an almost stable trend while the growth in the $85+$ cohort or the frail elderly is evident at $3.5 \%$ which is also a national trend.
- Median age in Boston inched upwards slightly from 30.3 years in 1990 to 31.1 years in 2000. This occurred, despite the general decline in elderly and general rise in youth, because of the aging of the baby boom population to the 40 s and 50 s.
- The male population grew slightly faster than female population ( $2.8 \%$ vs. $2.4 \%$ ), but females remained in the majority at $52 \%$ of the population compared to males at $48 \%$. Among the elderly ( 65 years and older) however, females account for $62 \%$ of the population.

## Population - Race

- The White population declined by nearly 40,000 in Boston, a drop of 11.1 percent despite the 2.6 percent rise in overall population.
- Black or African-American population gained a small $1.5 \%$ with the addition of only 2,257 persons.

Table 2. Population - Race

|  | 1990 | 2000 | Number Change | Percent Change |
| :---: | :---: | :---: | :---: | :---: |
| One Race | NA | 563,263 | NA | NA |
| White | 360,875 | 320,944 | $(39,931)$ | -11.1\% |
| Black of African American | 146,945 | 149,202 | 2,257 | 1.5\% |
| American Indian \& Alaskan Native | 1,884 | 2,365 | 481 | 25.5\% |
| Asian | 30,181 | 44,284 | 14,103 | 46.7\% |
| Asian Indian | 1,962 | 4,442 | 2,480 | 126.4\% |
| Chinese | 16,701 | 19,638 | 2,937 | 17.6\% |
| Filipino | 1,025 | 1,405 | 380 | 37.1\% |
| Japanese | 1,784 | 2,384 | 600 | 33.6\% |
| Korean | 1,146 | 2,564 | 1,418 | 123.7\% |
| Vietnamese | 4,754 | 10,818 | 6,064 | 127.6\% |
| Cambodian | 1,002 | 528 | (474) | -47.3\% |
| Hmong | 2 | 10 | 8 | 400.0\% |
| Laotian | 287 | 114 | (173) | -60.3\% |
| Thai | 293 | 378 | 85 | 29.0\% |
| Other Asian | 1,225 | 1,377 | 152 | 12.4\% |
| Bangaladeshi | NA | 63 | NA | NA |
| Indonesian | NA | 198 | NA | NA |
| Malaysian | NA | 55 | NA | NA |
| Pakistani | NA | 267 | NA | NA |
| Sri Lankan | NA | 60 | NA | NA |
| Other Specified | NA | 91 | NA | NA |
| Not Specified | NA | 643 | NA | NA |
| Two Asian Categories | NA | 626 | NA | NA |
| Native Hawaiian and Pacific Islander | 207 | 366 | 159 | 76.8\% |
| Some other race | 34,191 | 46,102 | 11,911 | 34.8\% |
| Two or More Races | NA | 25,878 | NA | NA |

- Asians in Boston grew by 14,103 or 46.7 percent in the decade. Largest absolute gains were shown by the Vietnamese, Chinese, and Asian Indians with 6,064, 2,937, and 2,480 persons gained while the greatest percentage gains were registered the Asian Indian, Vietnamese, and Korean groups with $126 \%, 128 \%$, and $124 \%$ marks.
- The "some other race" group increased by 11,911 persons or 35 percent most likely because of the increase in Hispanics that have a tendency to answer this category.
- No data on multiple race population existed in 1990 so a comparison cannot be drawn with 2000 data. Nearly 26,000 persons answered that they were of two or more races in 2000.
- The Hispanic population grew by 23,134 persons or $37 \%$ over the decade. ${ }^{1}$
- A large percentage gain (89\%) was shown in the Mexican category although in absolute terms Mexicans total only 4,126 persons.
- Puerto Ricans remained the largest Hispanic category in Boston at 27,442.

Table 3. Population - Hispanic and Race

|  | $\mathbf{1 9 9 0}$ | $\mathbf{2 0 0 0}$ | Number <br> Change | Percent <br> Change |

| Paraguayan | NA | 315 | NA | NA |
| All Other | NA | 24 | NA | NA |
| Other Hispanic | NA | 228 | NA | NA |
|  | 7,852 | 19,783 | 11,931 | $151.9 \%$ |
| Not Hispanic |  |  |  |  |
| White alone, not Hispanic | 312,328 | 504,052 | $(8,276)$ | $-1.6 \%$ |
|  | 338,734 | 291,561 | $(47,173)$ | $-13.9 \%$ |
|  |  |  |  |  |

[^0]- The greatest growth in Hispanic population occurred among the Central Americans (2,976 persons or 35\%) and the South Americans (1,847 persons or 36\%) as the Central American population reached 11,532 and the South American population reached 7,004.
- Despite these impressive gains in the Hispanic or Latino population groups it should still be pointed out that the large remaining category of "Other Hispanic" grew from 7,852 in 1990 to 19,783 in 2000. This category includes persons who did not designate a specific national origin and may mean that some of the above Hispanic categories are undercounted.

## Families and Households

- Total households grew by 11,064 , a pace of $4.8 \%$, somewhat faster than population reflecting a trend toward smaller household size.
- Population in households increased by 14,858 persons, or $2.6 \%$, in the 1990 s while population in group quarters rose by 2,228 persons, or $6.8 \%$.
- The number of children in households showed a small $5.0 \%$ decline in the 1990 s falling to 142,362 from 149,781 in 1990. This number was comprised of 100,177 children under 18 and 42,185 grown children residing at home, most likely young working adults and students.
- Other relatives in households also show an increase, going up by 4,619 or $12.7 \%$.
- Non-relatives in Boston households are increasing at a fast pace, growing by 6,610 persons or $11 \%$ in the decade.
- The group quarters population grew in both the institutionalized (nursing homes, jails, mental hospitals, etc.) and the non-institutionalized (college dormitories, homeless shelters, religious quarters, etc.) segments. In sum, 35,077 persons live in group quarters.

Table 4. Households - Relationships

|  | $\mathbf{1 9 9 0}$ | $\mathbf{2 0 0 0}$ | Number <br> Change | Percent <br> Change |
| :--- | ---: | ---: | ---: | ---: |
| Total Households |  |  |  |  |
|  | 228,464 | 239,528 | 11,064 | $4.8 \%$ |
| Total Population | 574,283 | 589,141 | 14,858 | $2.6 \%$ |
| In households | 541,434 | 554,064 | 12,630 | $2.3 \%$ |
| $\quad$ Householder | 228,464 | 239,528 | 11,064 | $4.8 \%$ |
| Spouse | 67,991 | 65,747 | $(2,244)$ | $-3.3 \%$ |
| $\quad$ Child | 149,781 | 142,362 | $(7,419)$ | $-5.0 \%$ |
| $\quad$ Own child under 18 years | 95,775 | 100,177 | 4,402 | $4.6 \%$ |
| Other relatives | 36,491 | 41,110 | 4,619 | $12.7 \%$ |
| $\quad$ Other relatives under 18 years | 11,001 | 13,170 | 2,169 | $19.7 \%$ |
| $\quad$ Nonrelatives | 58,707 | 65,317 | 6,610 | $11.3 \%$ |
| $\quad$ Unmarried partner | 10,919 | 14,719 | 3,800 | $34.8 \%$ |
|  |  |  |  |  |
| $\quad$ In group quarters | 32,849 | 35,077 | 2,228 | $6.8 \%$ |
| $\quad$ Institutionalized population | 8,356 | 8,481 | 125 | $1.5 \%$ |
| $\quad$ Non-institutionalized population | 24,493 | 26,596 | 2,103 | $8.6 \%$ |

- Family households (persons related by blood, marriage, or adoption living together) declined by $0.7 \%$ while non-family households (single persons or roommates) increased by $10.6 \%$, continuing the trend in Boston toward non-family household formation.
- Family households with children actually increased by a small amount, moving up by 2,770 households, or 5.4\%.

Table 5. Households by Type

|  |  | 1990 | 2000 | Number Change | Percent Change |
| :---: | :---: | :---: | :---: | :---: | :---: |
| Total | Households | 228,464 | 239,528 | 11,064 | 4.8\% |
|  | Family households (families) | 115,927 | 115,096 | (831) | -0.7\% |
|  | With own children under 18 years | 51,540 | 54,310 | 2,770 | 5.4\% |
|  | Married-couple family | 67,991 | 65,747 | $(2,244)$ | -3.3\% |
|  | With own children under 18 years | 28,251 | 28,219 | (32) | -0.1\% |
|  | Female householder, no husband present | 38,351 | 39,366 | 1,015 | 2.6\% |
|  | With own children under 18 years | 20,641 | 22,793 | 2,152 | 10.4\% |
|  | Non-Family households | 112,537 | 124,432 | 11,895 | 10.6\% |
|  | Householder Living Alone | 81,212 | 88,944 | 7,732 | 9.5\% |
|  | Householder 65 years or older | 23,297 | 21,796 | $(1,501)$ | -6.4\% |
|  | Households with individuals under 18 | 57,570 | 61,428 | 3,858 | 6.7\% |
|  | Households with individuals 65 years plus | 48,085 | 45,350 | $(2,735)$ | -5.7\% |
|  | Average household size | 2.37 | 2.31 | (0.06) | -2.5\% |
|  | Average family size | 3.19 | 3.17 | (0.02) | -0.6\% |

- Married-couple families declined by 2,244 households or $3.3 \%$, but married-couple families with young children remained steady.
- Female-headed households (with no husband) increased by $2.6 \%$, however the percentage of those with young children grew by 2,152 or $10.4 \%$.
- Boston continues to be home to many single-person households as the total grew to close to 90,000 persons in 2000 , showing a gain of 7,732 or $9.5 \%$. However, single-person elderly households declined by $6.4 \%$, or 1,501 persons.
- Average household size continued its downward trend over the decades but only showed a $2.5 \%$ decline from 2.37 to 2.31 ; no doubt the large growth in single-person households contributed to this trend.
- Average family size remained almost exactly the same in 2000 as in 1999 , showing a miniscule drop from 3.19 to 3.17.

## Housing

- Total housing units in Boston increased by only 1,072 units or $0.4 \%$ in the decade of the 1990s, reaching 251,935.
- Occupied units however increased by 11,064 units or $4.8 \%$ to 239,528 in the 1990 s.
- The overall housing vacancy rate dropped from $8.9 \%$ in 1990 to $4.9 \%$ in 2000.

Table 6. Housing Occupancy and Tenure

|  | $\mathbf{1 9 9 0}$ | $\mathbf{2 0 0 0}$ | Number <br> Change | Percent <br> Change |
| :--- | ---: | ---: | ---: | ---: |
| Total Housing Units |  |  |  |  |
| $\quad$ Occupied housing units | 250,863 | 251,935 | 1,072 | $0.4 \%$ |
| $\quad$ Vacant housing units | 228,464 | 239,528 | 11,064 | $4.8 \%$ |

| $\quad$ Rental vacancy rate (percent) | 2.6 | 1.0 | $(1.6)$ | $-62.1 \%$ |
|  | 7.8 | 3.0 | $(4.8)$ | $-61.5 \%$ |
| Occupied housing units | 228,464 | 239,528 | 11,064 | $4.8 \%$ |
| $\quad$ Owner-occupied housing units | 70,544 | 77,226 | 6,682 | $9.5 \%$ |
| $\quad$ Percentage of occupied units | 30.9 | 32.2 | 1.3 | $4.2 \%$ |
| $\quad$ Renter-occupied housing units | 157,920 | 162,302 | 4,382 | $2.8 \%$ |
| $\quad$ Percentage of occupied units | 69.1 | 67.8 | $(1.30)$ | $-1.9 \%$ |
|  |  |  |  |  |
| Ave. household size of owner-occupied units | 2.64 | 2.51 | $(0.13)$ | $-4.9 \%$ |
| Ave. household size of renter-occupied units | 2.25 | 2.22 | $(0.03)$ | $-1.3 \%$ |
| Ave. household size of all units | 2.37 | 2.20 | $(0.17)$ | $-7.2 \%$ |

- This increase in occupied units despite a minimal increase in total housing units was accomplished by the draw down in the number vacant units and therefore the vacancy rate in the 1990s.
- The year 2000 housing vacancy rate of $4.9 \%$ however (which seems large) was probably significantly affected by the number of units that were considered "seasonal, recreational, or occasional", or were considered "all other vacant" (which includes caretaker units or units held off the market for reasons such as repair or renovation).
- Taking out the seasonally vacant and "all other" vacant units leaves the housing vacancy rate for owner-occupied units at only $1.0 \%$ in 2000, down from the $2.6 \%$ mark in 1990; less than 1,000 units were vacant for sale.
- Housing vacancy rates for renter-occupied units reached $3.0 \%$ in 2000 , down from $7.8 \%$ in 1990; less than 3,800 units were vacant for rent, a "frictional" amount (i.e., only allowing for the normal movement of people into and out of homes.)
- Owner-occupied units grew by 6,682 units, or $9.5 \%$, in the 1990 s, largely due to a draw down in vacant units for sale.
- Renter occupied units grew by 4,382 units or $2.8 \%$ in the 1990 s, also due to a lowering of the vacant supply.
- The average household size of owner-occupied units declined from 2.64 in 1990 to 2.51 in 2000, most likely due to smaller condominium units.
- The average household size of renter-occupied units declined minimally from 2.25 in 1990 to 2.22 in 2000.

[^0]:    ${ }^{1}$ In Table 3, because the 1990 numbers for Dominicans, Central Americans, and South Americans are from the STF3 data and not the STF1 data, they do not correspond directly and totals may not add exactly.
