US Census 2000 SF3 Data

## INTRODUCTION

This report is the 12th in a series of reports focusing on selected socio-economic characteristics of Boston and its neighborhoods. It is derived from Summary File 3 (SF 3) data from Census 2000 (1).

The Census Bureau has been releasing Census 2000 data sets in stages with increasing level of detail and varied purposes. The first release in March 2001 was the Census 2000 Redistricting Data (P.L. 94-171) Summary File in March of 2001. The P.L. 94-171 data contained only summary statistics for the total population, the population 18 years and over, 63 racial categories, and for Hispanic or Latino origin. This file provides the base data for the redistricting of US Congressional seats.

The next data released was in the summer of 2001. Summary File 1 (SF 1), sometimes called the 100% count, contains counts of age, gender, housing units and occupancy, and household characteristics in addition to population and race.

The third set, Summary File 3 (SF3) upon which this report is based, was released in late 2002. SF 3 data are based upon sampling by the Census and are sometimes called the long form data. This set is more comprehensive and detailed than SF 1 and SF 2 and describes such socio-economic data as income, employment status, ethnic background, and family structure.

The Policy Development and Research Division of the BRA has aggregated the raw Census data to each of the city's neighborhoods, as defined by the BRA's 16 Planning Districts. The neighborhood geographies used here are same as those used since 1970, thus permitting the study of change in neighborhoods over time.

1. All reports are available from the Policy Development and Research Department of the Boston Redevelopment Authority at the Research Desk on the 9th floor of Boston City Hall, or by calling 617-918-4269, or on-line at [www.cityofboston.gov/bra/pdr.asp](http://www.cityofboston.gov/bra/pdr.asp).

## NOTES TO THE READER

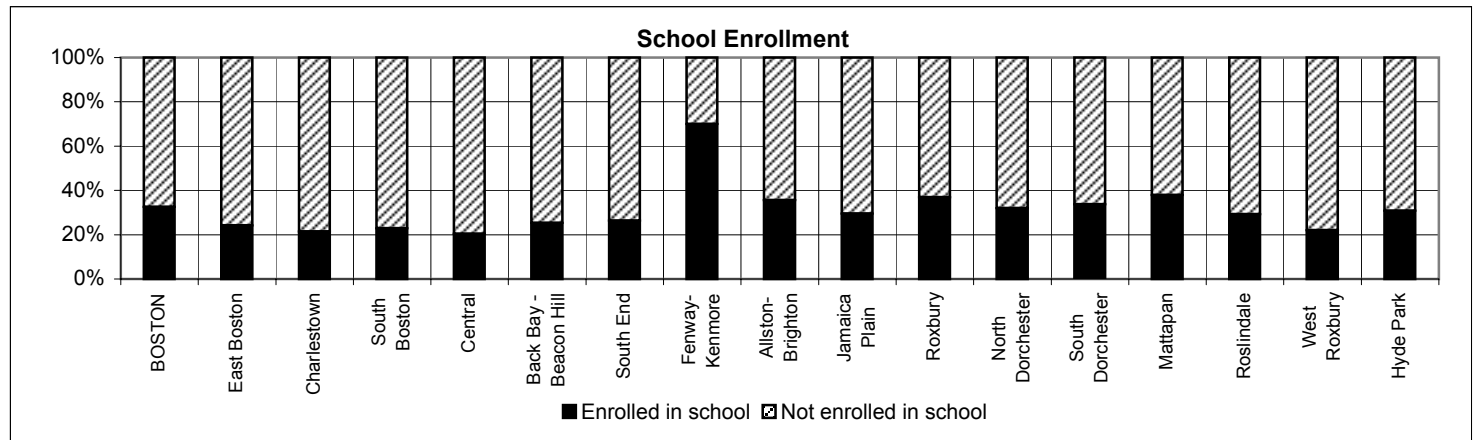

1. The basic unit of aggregation is the Census Block Group and the source data are given in "P" Tables and "H" Tables in the SF3 Datasets released by the US Census Bureau.
2. In the aggregation of data, some of the Planning Districts where Block Groups straddle across their boundaries required minor approximation. Because of changes in the boundaries of Block Groups between 1990 and 2000, precise comparison of 1990 and 2000 data on neighborhoods is not possible.
3. At the end of the table title, whenever applicable, numbers within parentheses representing table numbers assigned by the US Census are given. A complete list of P and H Tables, which provide data at the Block Group level, is given in the Appendix. These table numbers will be useful in accessing table for different types of geography, such as a Census Tract or a county.
4. While variables are retained in their original form, some of their class intervals have been aggregated into fewer intervals to make the tables simpler.
5. Some tables have additions of derived data such as medians or per capita incomes.
6. For definition of terms, please see Census 2000 Glossary which is published as a separate document (Report #: 568) by the BRA .

A third of Boston's population 3 years and over is enrolled in schools with classes that range from primary to professional levels. While most of the neighborhoods show schooling rates closer to this proportion, Fenway-Kenmore stands out for its school enrollment particularly in colleges and other institutions of graduate and professional education.

Nearly 70% of school enrollment in Fenway-Kenmore is in college and graduate schools, making it the most distinct location for student residents. While Allston-Brighton and Back Bay-Beacon Hill form a significant second tier, most other neighborhoods report less than 10% in colleges and grad. schools.

The proportions of professional and college graduates in seven neighborhoods exceed Boston's rate of 40%. As a place for upper income professionals, Back Bay-Beacon Hill shows a high level of educational attainment. And the leading neighborhoods with 50% college and graduate education are in the core areas of the city, perhaps reflecting the return of young urban professionals.

Considering the proportion of residents who lived in a different house five years ago, Boston shows a transient character of the resident population particularly in neighborhoods such as Fenway-Kenmore and Allston-Brighton where very high proportions of student live. The outlying neighborhoods and the core city areas- South Boston and East Boston, are relatively stable as indicated by the proportion of people who lived in the same house five years ago, at rates higher than the city's.

The foreign-born residents who have more recently arrived form significant percentages in Fenway-Kenmore, Charlestown, Back Bay-Beacon Hill and North Dorchester. These reflect large numbers of students, immigrants, and residents in public housing.

Those foreign-born living in West Roxbury, Hyde Park and Roslindale are predominantly those who came before 1990.

As a corollary to the high percentages of the foreign born and non-natives in the neighborhoods of East Boston, North Dorchester and Roslindale, higher proportions of households also do not speak English at home. In contrast, Charlestown, South Boston, Back Bay-Beacon Hill and West Roxbury continue to be the neighborhoods with the highest percentage of homes where only English is spoken.

Among non-English speaking households, East Boston, North Dorchester, and Central are at the lower end of the scale of proficiency in English. The level of proficiency also reflects the ethnic/racial diversity of some of the neighborhoods. East Boston in particular has a large Central American population, North Dorchester has a large share of Cape Verdeans, and Central, Asians.

The most linguistically isolated households (see census definition at the bottom of page) are in East Boston while the least of them in Back Bay-Beacon Hill.

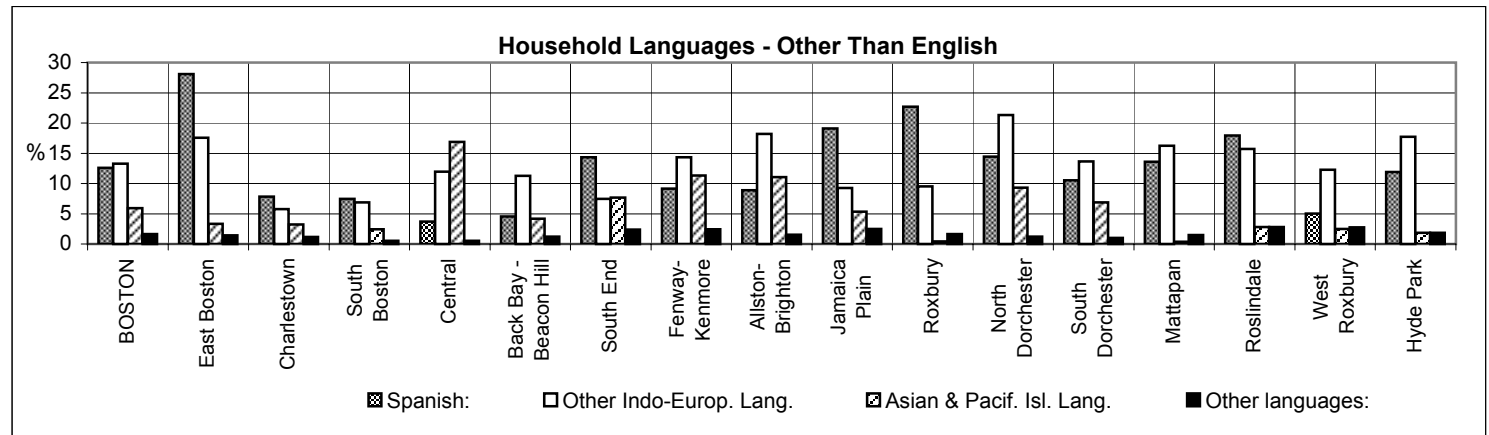

A linguistically isolated household is one in which no member 14 years old and over (1) speaks only English or (2) speaks a non-English language and speaks English "very well." In other words, all members 14 years old and over have at least some difficulty with English.
