# Boston in Context - Neighborhoods

*Boston in Context - Neighborhoods* compares the United States, Massachusetts, Boston, and Boston's neighborhoods across several social, economic, and housing characteristics. Neighborhood boundaries in this report are based on zip code and zoning boundaries. These data are a combination of 2010 U.S. Census data and 2009-2013 American Community Survey (ACS) data.

The Decennial Census is reported at the Block level (the smallest available geography), and the ACS is reported at the Census Tract and Block Group levels. As a result, the Neighborhood populations will differ between the Decennial Census and ACS data.

For the Decennial Census data analyses, Neighborhoods were defined by Census Blocks; however, the majority of ACS data are only available at the Census Tract level. When Census Tracts were split by Neighborhood boundaries, 2010 Census Block level data were consulted. In each case, the Census Tract was assigned to the Neighborhood where the higher concentration of residents lived at the Block level in 2010.

Census Tract 9815.02 is partially in East Boston and partially in Revere. When aggregating ACS data for the American Fact Finder website, the Census Bureau assigned the entire population of this tract to Revere. As a result, we exclude tract 9815.02 from our aggregations of ACS data for East Boston in this report. Census Tract 9901.01 is also unassigned to a Neighborhood. As a result, the aggregate of all Neighborhood data does not equal the total for Boston.

Lastly, due to data limitations, the neighborhoods of Chinatown, Leather District, and Downtown were combined into "Downtown" for all ACS analyses. The same was done with the South End and Bay Village. The consolidated neighborhood is called "South End" for all ACS analyses.

Structures in Roslindale, taken by Alex MacLean
